Comparison of short and long-time properties for KVA tube steel, KPJ pipe steel and LFA header steel conducted at 450° C. under a creep rate of 8 ton/in.^{2} up to 100,000 hr. Data are presented in the form of stress against temperature curves with a review of rupture tests on other carbon steels containing 0.07-0.51% carbon. 35 ref. (Q3, 2-60, 2-61, 3-67; CN)

1230-Q. Science for Electroplaters. Pt. 66. Nickel-Hardness, Tensile Strength. L. Serota. Metal Finishing, v. 59, July 1961, p. 69-70.

Experimental analysis of the hydrogen and colloidal inclusion theories as explanations for variations in hardness of electrodeposited Ni. Crystal structure, tensile strength and abrasion resistance. (To be continued.) (Q29n, 2-60, 3-71, M26, Q27a, Q9n; Ni, 8-62)

1231-Q. Aircraft Wheel Bearing Failures--Why? E. B. Palmer. Scientific Lubrication, v. 13, June 1961, p. 20-24.

Inspection for pits, corrosion, dents, scratches, fatigue, worn or cracked retainers, Brinelling, fractures, carbonization and heat discoloration. Procedure for cleaning, lubricating and packing. (Q9, Q7, Q26, R-general, T7d, 18-73)

1232-Q. (English.) Deep Temperature Tensile Tests. Th. Lipp. Werkstatt und Betrieb, v. 94, May 1961, p. 122.

Application of a tensile testing machine with a deep-freezing tank for tensile testing of steel wires, foils and strip down to -70° C. (Q27, 1-54, 2-63; ST)

1233-Q. (English.) Tool Steels for the Cold Extrusion of Steel. Herbert Briefs. Werkstatt und Betrieb, v. 94, May 1961, p. 122-123.

Evaluation of steel types and their mechanical and physical properties for application in cold extrusion dies. Rockwell C hardness and impact-ball hardness of hardened high-speed steel B18 and carbon sheet C 100 WI are compared as a function of the testing temperature at a holding period of 1 hr. 7 ref. (Q29n, Q-general, T6r; TS, 17-52, 17-57)

1234-Q. (French.) Rapid Flow of Nicral D Alloy. Jean Poulignier. Recherche Aeronautique, no. 81, Mar-Apr. 1961, p. 13-21.

The refractory Fe-Ni-Cr alloy Nicral D is tensile-tested at temperatures of 900-1300° C. to determine elongation and reduction of area as a function of temperature for the condition of rapid flow (i.e. time elapsed until rupture: 1-90 min.) 4 ref. (Q3m, Q27, Q23p, 2-61; Fe-b, Ni, Cr)

1235-Q. Boron in Steel. Mechanical World, v. 141, July 1961, p. 245-246.

Influence of boron on hardenability, corrosion cracking, tensile impact and rupture strength. Maximum boron hardenability is obtained with alloys containing 0.00033% effective boron at the austenitizing temperature (840° C). (Q-general, J5, 2-60; AY, B)

1236-Q. (Translation-Brutcher no. 5120.) Creep Properties of 18-8 Columbium Stainless Steel. Shoji Terai. Tetsu-to-Hagane (Iron and Steel Institute of Japan, Journal), v. 46, Mar. 1960, p. 379-381.

Effect of Cb and Ti on creep rupture properties. Stress versus rupture time relationship with smooth as against notched specimens; effect of temperature on solution treatment; differences in creep versus time under load relationship between 18-8 Cb and 18-8 Ti steel annealed at various temperatures. (Q3q, 2-60; SS, Ti, Cb)

1237-Q. (Translation-Brutcher no. 4979.) Present State and Perspectives of Metal Science in the German Democratic Republic. F. Erdmann-Jesnitzer. Metallovedenie i Termicheskaya Obrabotka Metallov, Oct. 1959, p. 2-5.

Survey of research and development on metal plasticity, cold deformation

and recovery of polycrystals, migration of grain boundaries during deformation within grain growth temperature range. (Q24)

1238-Q. (Translation-Brutcher no. 4981.) Measurement of Elastic Stresses in Metals by X-Rays. E. Schiebold and H. Stroppe. Metallovedenie i Termicheskaya Obrabotka Metallov, Oct. 1959, p. 16-19.

Report on the Schiebold X-ray tensograph, based on use of a primary X-ray beam in the form of concentric circular cones to form a perpendicular to the specimen surface with a specified apex angle. (Q25)

1239-Q. (Translation-Brutcher no. 4121.) Changes in Properties of Ni-Cr Alloy E1765 for Stationary and Propulsion Turbines During Heating for up to 10,000 hr. V. Z. Tseitlin and G. G. Morozova. Metallovedenie i Termicheskaya Obrabotka Metallov, Jan. 1958, p. 30-35.

Data on a Ni-base alloy containing about 15% Cr, 5% W, 4% Mo, 1.3% Ti, 2% Al, 0.008% B, balance Ni, tested for periods of up to 10,000 hr. at high temperatures. Brinell hardness, impact toughness, electrical resistance and magnetic susceptibility at 1380° F. (Q3; Ni-b)

1240-Q. (French.) SG-Cast Iron. Michel Paris and Jean Driancourt. Technique Moderne, v. 53, Mar. 1961, p. 104-106.

Introduction of Mg into cast iron free of S, Ti and Al and containing a maximum of 0.1% P under high pressure, tensile strength and elongation. Corrosion in 40% H_2SO_3 and 50% HCl from 105-108° C., in sea water and maritime soil. Application in the manufacture of crankshafts, camshafts and cylinders for hydraulic brake systems and light and heavy pipes for high pressure applications. (Q27a, Q23p, R6g, R4b, R8; CI-r, 17-57)

1241-Q. (Russian.) Study of Cast and Forged Heat Resistant Steel. B. M. Kolobashkin. Liteinoe Proizvodstvo, Dec. 1960, p. 34-36.

Comparison of specimens of EI481 steel of same size and composition tested at different temperatures (20-800° C.) and aging time (0-150 hr.) showing advantages of cast steel over forgings in terms of mechanical properties, such as tensile strength, elongation, reduction of area, weakening under load and brittleness. 4 ref. (Q-general, 2-61, 2-64; ST, 4-51, 5)

1242-Q. (Translation-Brutcher no. 5130.) Effect of Segregation of Elements in Cast Technical Iron on Plasticity. G. K. Mekhed and A. A. Baikova. Trudy Inst. Met., v. 4, 1960, p. 254-256.

Preliminary study of permissible limits of segregation of C, Mn, S, Al and O_2 in 1765 lb. ingots of openhearth rimmed and killed 0.03% carbon steel for easy subsequent working and uniform mechanical properties. Melting and deoxidizing procedures; numerical data on distribution of elements over 16 cross sections along the ingot length. (Q23p; CI, 5-59)

1243-Q. (Translation-Brutcher no. 5006.) Fatigue Strength of Hot Rolled Steel Rods and Flats With Scaled Surface. I. V. Kudryavtsev. Metallovedenie i Termicheskaya Obrabotka Metallov, Dec. 1959, p. 31-35.

Results of tensile and hardness tests on as-rolled and as-machined sections of various carbon steels; fatigue test results; effect of "black" surface on fatigue of shafts and flats under noncontact versus contact conditions. (Q7a; CN)

1244-Q. (Translation-Brutcher no. 5013.) Speed of Sound Propagation as a Quality Criterion of Gray Cast Iron. Metallovedenie i Termicheskaya Obrabotka Metallov, Dec. 1959, p. 55-60.

Simple method of assessing the properties of gray iron castings with standard ultrasonic ultrasonic pulse-echo apparatus. Determination of velocity of sound propagation and elastic modulus in cast iron. Effect of section size on elastic modulus, tensile strength and Brinell hardness. (Q21a, Q21f, 1-74; CI-n)

1245-Q. (Translation-Brutcher no. 5180.) Investigation of Heat-Resisting Steel As-Cast and As-Forged. B. M. Kolobashin. Liteinoe Proizvodstvo, Dec. 1960, p. 34-36.

Study of advantages offered by a 0.30% C, 8% Mn, 13% Cr, 8% Ni heat resisting steel for high temperature service. Tensile test results obtained from 20-700° C.; creep tests results at 650° C. (Q27a, 2-64; ST, SGA-h)

1246-Q. A Study of the Accumulation of Fatigue Damage in Steel. W. H. Erickson and Clyde E. Work. ASTM Preprint no. 71, 1961, 14 p. $.50.

Accumulation of fatigue damage in SAE 4340 steel at stresses up to 150% of the endurance limit. It is observed that damage depends on the stresses employed to evaluate it and is not a linear function of the number of repetitions of stress. 21 ref. (Q7, 3-66; AY)

1247-Q. Creep and Rupture Properties of Five Copper Base Casting Alloys. Donald P. Moon and Ward F. Simmons. ASTM Preprint no. 78, 1961, 18 p. $.50.

Creep evaluation is conducted on cast specimens of 76% Cu, 2 1/2% Sn, 6 1/2% Pb, 15% Zn, 65,000-psi. manganese bronze, 110,000 psi. manganese bronze, 20% Ni-Ag, and 81-4-15 silicon brass alloys at selected temperatures between 250-550° F. Stability of these alloys during creep exposure is determined by tension tests and metallographic examination after creep exposure. 6 ref. (Q3, Q23, M-general, 2-61; Cu-b, Sn, Pb, Zn, Cu-s, Ag-b, Ni, Cu-n)

1248-Q. Some Effects of Section Size and Testing Condition on Tensile Properties of Zircaloy 2 at 600° F. S. L. Ames. ASTM Preprint no. 84, 1961, 10 p. $.50.

Zircaloy 2 in a number of mill product forms is tested after annealing in vacuum or air. Effects of changes in tensile test procedure, annealing method and oxygen impurities. Yield and tensile strengths appear to be dependent on type of specimen used. 7 ref. (Q27, 2-60, 2-64, 3-73; Zr-b)

1249-Q. Influence of Sheet Thickness on Sharp-Edge-Notch Properties of a Beta-Titanium Alloy at Room and Low Temperatures. A. J. Repko, M. H. Jones and W. F. Brown, Jr. ASTM Preprint no. 80b, 1961, 17 p. $.50.

B120 VCA Ti alloy sheets from 0.010-0.130 in. thick are tested at temperatures ranging from -320° F. to room temperature to determine influence of thickness on fracture toughness, per cent shear and slow crack extension. 7 ref. (Q3, Q26q, Q2g, 3-73, 2-61; Ti-b)

1250-Q. Why Did These Parts Fail? John Carroll. Materials in Design Engineering, v. 54, July 1961, p. 91-95.

Improper techniques as factors causing breaks, fracture, rupture, corrosion, chipping, bursting and fatigue fracture failure in various industrial products. (Q-general, 2-60, 3-68, T-general, 9)

1251-Q. The Role of Materials in Cryogenics. Donald Peckner and Malcolm Riley. Materials in Design Engineering, v. 54, July 1961, p. 107-118.

Use of superconductors in switching devices and cryogenic magnets. Mechanical properties of austenitic stainless steels, Al and Al alloys, Co and Ni alloys, Ti, Mg, Ta, alloy steels, glass and plastics at cryogenic temperatures. Methods for evaluating and testing plastics. 20 ref. (Q-general, P15g, 2-63; SS-e, Al, Co-b, Ni-b, Ti, Mg, Ta, AY, 17-57)

1252-Q. Microplasticity in Metals and Alloys at Low Temperatures. P. Feltham. Metal Treatment and Drop Forging, v. 28, June 1961, p. 221-224.

The yield phenomenon in mild steel and alpha brasses and short range order in alpha brass are studied by creep and stress relaxation tests at small plastic strains from 77-358° K. Relations are obtained on the dynamics of dislocations occurring on an atomic scale. (Q23b, Q24c, M26b, N10, 2-63, 3-68; CN, Cu-n)

1253-Q. Theoretical Investigation of the Behavior of Steel Structures at Elevated Temperatures. N. W. Murray and R. W. Bailey. Paper from "Nuclear Reactor Containment Buildings and Pressure Vessels". Butterworths & Co. (Publishers) Ltd., London, England, 1960, p. 379-382.

Two methods enable the behavior of steel structures at elevated temperatures to be studied. In the first method, creep curves are completely linearized and the concept of a creep surface is used. For the steel used it is possible to use a hyperbolic paraboloid as the creep surface and so obtain great simplification of creep phenomena. In the second method the creep curves are approximated by empirical laws and the ef-

fects of changes in the variables are obtained by integration. (Q3, 2-62; ST)

1254-Q. Thermal Stresses in Thin-Walled Circular Cylinders. D. J. Payne. Paper from "Nuclear Reactor Containment Buildings and Pressure Vessels". Butterworths & Co. (Publishers) Ltd., London, England, 1960, p. 393-410.

Analytical and numerical methods are used to find the elastic stresses and deflections produced by temperature variations over the surface of a cylinder typical of those used to support the core of graphite moderated gas-cooled reactors. The particular temperature distribution studied varies exponentially along the cylinder and sinusoidally around it. 12 ref. (Q25p)

1255-Q. The Steady Creep of Shells--A Method of Analysis. C. R. Calladine. Paper from "Nuclear Reactor Containment Buildings and Pressure Vessels". Butterworths & Co. (Publishers) Ltd., London, England, 1960, p. 411-431.

An expression is set up to describe the creep behavior of a shell element subject to arbitrary bending and direct stress resultants. The expression contains a single quadratic interaction expression in contrast to the more usual piecewise-linear expressions. A creep law is used in which strain rate depends on the third power of the stress. A finite difference iterative method is described by which the shell equations, incorporating the results of the first part of the analysis, may be solved. (Q3, 3-66)

1256-Q. Analysis of Brittle Strength of a Reactor Vessel. J. Nemec. Paper from "Nuclear Reactor Containment Buildings and Pressure Vessels". Butterworths & Co. (Publishers) Ltd., London, England, 1960, p. 521-531.

Analysis of brittle fracture based on a certain number of new theoretical stress and plastic strain characteristics. 20 ref. (Q26s, 3-66, 3-68)

1257-Q. Brittle Fracture Behavior of Metal Structures. H. M. Schnadt. Paper from "Nuclear Reactor Containment Buildings and Pressure Vessels". Butterworths & Co. (Publishers) Ltd., London, England, 1960, p. 532-541.

Relation between brittle fracture safety of a metal structure and stress calculations based on its elastic behavior. (Q21, Q26s, 3-66)

1258-Q. Repeated Rest Periods in the Fatigue of a Mild Steel Bar. J. G. Whitman. Engineer, v. 211, June 30, 1961, p. 1074-1076.

A series of fatigue tests conducted on mild steel specimens containing a machined stress raiser indicating the effect of short rest periods between each application of stress fatigue behavior with applications to welded structures. (Q7; ST)

1259-Q. Preventing Fatigue Failures. Pt. 6. Bi-axial Fatigue Stresses. F. B. Stulen, H. N. Cummings and W. C. Schulte. Machine Design, v. 33, July 6, 1961, p. 154-158.

Method for relating multiaxial fatigue stresses to a single allowable fatigue stress. Sample calculations using SAE 4340 steel structural parts. 4 ref. (Q7e; ST)

1260-Q. Statistical Analysis of Tensile Properties of Heat-Treated Ti-4Al-3Mo-IV and Ti-2.5Al-16Y Sheet. G. H. Beatty and H. R. Ogden. Defense Metals Information Center, Battelle Memorial Institute, DMIC Report no. 46J, June 6, 1961, 41 p. (Available as PB 171425 from U. S. Office of Technical Services, Washington 25, D.C.)

Ultimate strength, yield strength and elongation data are determined for solution treated and aged sheet-rolled alloys. (Q27a, Q23, 2-60, 2-64, 3-68; Ti-b, Al, Mo, V, 4-53)

1261-Q. The Effect of Manganese on the Tensile Properties of Quenched and Aged Aluminum-Copper Alloys Containing 3 and 4.5 Wt.% Copper. V. B. Ghate and D. R. F. West. Metallurgia, v. 63, June 1961, p. 269-272.

Measurement of elongation, ultimate tensile strength and proof stress of wrought Al alloys containing 0-2.0 wt.% Mn. The alloys are solution treated at 525° C. and aged for times up to 120 days at 130° C. Examination of transcrystalline fracture. 12 ref. (Q27, Q23p, S21, Q26, 2-60, 2-64; Al-b, Cu, Mg)

1262-Q. Vanadium-Columbium Alloys. Metallurgia, v. 63, June 1961, p. 275.

Ultimate tensile strength, stress-rupture properties, strain rate sensitivity, aqueous corrosion resistance and

oxidation resistance of V-Cb alloys containing 20-50% Cb by weight for application in oxidizing and reducing environments. Effect of hot working, stress relieving and Ti and Al additions. (Q27a, Q3m, Q27h, R4, R1h, 2-60, 2-64; V-b, Cb-b)

1263-Q. An Improved Tensile Testing Apparatus. N. C. Balchin and B. L. Mordike. Metallurgia, v. 63, June 1961, p. 313-314.

Testing method in which accurate indication of load is obtained by use of a complaint spring and in which the strain rate is maintained constant as if an infinitely stiff spring were used. (Q27, 1-53)

1264-Q. The Use of the Inverted Microscope for Series Micro-Hardness Testing. E. J. Hooker. Metallurgia, v. 63, June 1961, p. 315-317.

Errors arising from incorrect counter-poising on inverted microscopes are allowed for by including a standard test piece within each specimen mount and measuring its hardness under the same conditions of balance. Multiplying factor is then obtained to correct the hardness of the other specimens in the mount. Application to Pb specimens containing 0.2-0.8% Sb. 4 ref. (Q29q, 1-53; Pb-b, Sb)

1265-Q. Excess Negative-Rake Strain-Hardens Torsion Bars. Metalworking Production, v. 105, June 28, 1961, p. 54.

Turning with an excessively negative-raked tool produces a modified amorphous martensitic surface. Measurements of fatigue resistance are compared with those of roller-burnished specimens. (G17a, G19, 3-68, Q7a, Q24m)

1266-Q. (Translation-Brutcher no. 4963.) Interplay of Creep and Stress Relaxation. I. A. Oding and G. F. Lepin. Metallovedenie i Termicheskaya Obrabotka Metallov, Sept. 1959, p. 2-8.

Previously abstracted from original. See item 1354-Q, 1959. (Q3, Q3a)

Previously abstracted from original. See item 905-Q, 1961. (Q26s; ST)

1282-Q. Friction and Wear for Water-Lubricated Seals. Robert L. Cornell, Robert S. Lucas and Harold G. Young. Product Engineering, v. 32, July 24, 1961, p. 38-41.

Wear rate is investigated as a function of friction using carbon and laminated phenolic seals running against bronze, K-Monel and Stellite-faced and chrome-plated steel. A synthetic sea water is used as the lubricant. 5 ref. (Q9p; ST, Cu-n, C, NM-b, Ni-b, Co-b, Cr)

1283-Q. Six New Techniques for Photoelastic Coatings. Felix Zandman and Herb N. Maier. Product Engineering, v. 32, July 24, 1961, p. 42-45.

Stress analysis applied to the design of Al engines by bonding a layer of photoelastic plastic to the part, applying a load of 1000 psi. and viewing discoloration of the coating using a reflection polariscope. Elastic, reversible coating allows measurement of static and dynamic strain. (Q25, T21b; Al, 17-57)

1284-Q. (Japanese.) Wear Phenomena of Heat Treated Titanium Cast Iron With Eutectic Graphite Structure. Eiichi Takeuchi. Imono (Japan Foundrymen's Society, Journal), v. 33, Apr. 1961, p. 271-277.

Wear tests on titanium cast iron specimens after hardening, annealing, tempering or isothermal treatments from 150-900° C. with superior wear resistance being attributed to isothermally treated specimens. Data are given for Rockwell B and Vickers hardness. 6 ref. (Q9n, Q29n, 2-64, 2-65; CI)

1285-Q. Effect of Organic Compounds on Metal Fatigue. Products Finishing, v. 25, July 1961, p. 78, 82-83.

Increase in fatigue life of steel, Mg and Cu-Be alloys by coating with organic compounds. Compounds having a carbon chain of at least 12 with a polar group at one end are found to be most beneficial. (Q7b, L26; ST, Mg, Cu-b, Be)

1286-Q. New Casting Alloy Is Strong, Ductile Without Solution Heat Treatment. Modern Metals, v. 17, June 1961, p. 48.

Al casting alloy, called Precedent 71B, can be stress relieved at only 700° F. and retains high tensile and yield strength for structural applications. Elongation, Brinell hardness and fatigue endurance limit as compared to Rolls Royce 50 and 355T6. (Q-general, J1a, E25p; Al-b)

1287-Q. Rolling-Contact Fatigue Studies With Four Tool Steels and a Crystallized Glass Ceramic. Erwin V. Zaretsky and William J. Anderson. American Society of Mechanical Engineers, Transactions (Journal of Basic Engineering) Paper no. 61-LubS-3, 1961, 8 p.

Rolling contact fatigue properties of crystallized glass ceramic balls together with AISI M-1, AISI M-50, Halmo and WB-49 alloy steel balls tempered to various hardness levels are determined in the NASA spin rig and in the five-ball fatigue tester. (Q7, 3-68, T7d; TS, NM-f, 17-57)

1288-Q. Development of Techniques for Producing Beryllium Structural Shapes. 3rd Interim Technical Report no. AF33(600)-41959-3. Beryllium Corp., Reading, Pa., Jan. 29-Apr. 28, 1961, 68 p.

Tensile and yield strengths and formability of rolled sheet and bar Be are investigated as a function of beryllium oxide level and of rolling parameters. Mechanical properties and microstructure are studied to determine effects of heat treatment, aging, cladding and extruding. (Q27, Q23, M27, 2-60, 2-64, 3-68; Be, 4-53, 4-55)

1289-Q. A Review of Some Recent Developments in Copper Alloy Technology. C. D. Campbell and A. H. Coote. Australian Institute of Metals, Journal, v. 6, May 1961, p. 137-149.

Composition and mechanical properties of Cu alloys and wrought and alloy bronzes. Fabricating techniques including continuous casting and various methods of preparing heat exchangers such as roll bonding, tube-in-strip and integral finned tube. Methods of preparing fine-grained brass strip, of hot pressing brass and of welding Cu alloys. 9 ref. (Q-general, C5q, G1, 1-66, K-general, W13b; Cu, Cu-n, 4-53)

1290-Q. Tensile Properties of Annealed Chromium Between -196 and +900° C. C. W. Weaver. Institute of Metals, Journal, v. 89, June 1961, p. 385-390.

Tensile tests on extruded annealed high purity specimens from -196 to 900° C. to establish brittle fracture behavior and ductile behavior of Cr. The brittle-ductile is sensitive to N impurity content with the brittle fracture stress being temperature dependent. Data are given for tensile properties and yielding, strain aging, workhardening, strain-induced precipitation and strain rate effects as a function of temperature, purity, b-c-c. structure and deformation velocity. 19 ref. (Q27, Q23r, Q26s, 2-60, 2-61, 3-68; Cr-a)

1291-Q. Strain Rate Distribution During Experimental Metal Rolling. K. S. Yajnik and J. Frisch. American Society of Mechanical Engineers, Transactions (Journal of Engineering for Industry), Paper no. 61-Prod-6, 1961, 8 p.

Measurement of two-dimensional plastic flow of Pb (99.9%) strips during torque-free rolling at room temperature. Determination of the slipline field and the maximum shear strain rate. Comparison of experimental plastic-rigid boundary with theoretical solution. 11 ref. (Q24, F23, 3-68; Pb, 4-53)

1292-Q. Metallurgical Concomitants of Residual Stress. G. M. Boyd. British Welding Journal, v. 8, July 1961, p. 343-348.

Strain-aging, quench-aging and other similar metallurgical changes which a steel undergoes during welding can most often cause the embrittlement that is ascribed to stress conditions. 24 ref. (Q26s, 2-65, Q25h; ST, 7-51)

1293-Q. (Japanese.) Stress-Strain Relationship of Mild Steel Under Impact Tensile Loading. Pt. 1. Studies of Tensile Properties of Steels Under High Speed Impulsive Loading. Seita Sakui,

Tadahisa Nakamura, and Shigetomo Nundmura. Tetsu-to-Hagane (Iron and Steel Institute of Japan), v. 47, June 1961, p. 800-809.

The impact tensile properties of annealed mild steel specimens at room temperature under various loading conditions are measured experimentally; discussion of the observed load-time curve and related stress strain curves in terms of plastic and elastic strain wave propagation. The strength properties are related to impact velocity and also to specimen dimensions and ferrite grain size. (Q27b, Q24j; Q25n, 3-67, 3-73; CN)

1294-Q. (English.) Effect of Grain Size and Size of Notch on the Fatigue Behavior of a Magnesium Alloy. F. H. Vitovec. Schweizer Archiv, v. 27, Apr. 1961, p. 163-166.

Fatigue testing at room temperature of Mg specimens containing 2.49% Al of different grain size and with different notch size in the specimen. Analysis of results for correlations between grain size, size of notch, relative stress gradient, stress gradient prograin and theoretical maximum strength of notched specimens. 13 ref. (Q7, 2-59, 3-66, 3-73; Mg-b)

1295-Q. (German.) Causes and Removal of Residual Stresses in Gray Cast Iron Castings. W. Felicke and F. Kuhndorfer. Maschinenbau Technik, v. 10, May 1961, p. 233-237.

Occurrences of residual stresses during cooling and methods for their experimental measurement. Methods for elimination of residual stresses, including aging, mechanical means such as vibration, and heat treatments (stress-free annealing). 15 ref. (Q25h, G23, J1a, 2-61; CI-n, 5)

1296-Q. Model Investigations of Unstiffened and Stiffened Circular Shells. L. A. Harris, H. S. Suer and W. T. Skene. Experimental Mechanics, v. 1, July 1961, p. 1-9.

Fiberglass, Mylar, 18-8 stainless steel, 2S-H-18 Al alloy and 2024-T3 Al alloy cylinders are tested under compressive, bending and torsion loads to determine effect of modulus of elasticity, compressive yield strength, Poisson's ratio and stringer geometry on stress distributions and buckle patterns. 8 ref. (Q25, Q1, Q5, Q28; SS, Al-b)

1297-Q. Damping Characteristics of Pipes Vibrating in Flexure and Filled With Various Materials. Ahmed Ezzat. Experimental Mechanics, v. 1, July 1961, p. 10-15.

Measurement of vibration parameters of oscillating Al alloy pipes with magnetic pickup coil to determine effect of kinematic viscosity of filler fluid and solid filler particle size on damping co-efficient, resonant frequency and equivalent spring constant. (Q8; Al-b, 4-60)

1298-Q. Structural Testing at High Temperature. Louis Young. Experimental Mechanics, v. 1, July 1961, p. 16-22.

Testing a large multicell box beam of 420 stainless steel unfilled and filled with a 2% solution of carboxy-methylcellulose at temperatures between 80-230° F. to determine effect of transient heating and applied load on stress distribution and heating rate. (Q25p, 2-61, 3-68; ST)

1299-Q. Crack Propagation. W. MacFarlane. Paper from "West of Scotland Iron and Steel Institute, Journal", v. 67, 1959-1960, p. 61-85.

Rates of crack propagation obtained during fatigue tests on mild steel are measured by two different methods and results compared with existing theories and correlated with structural changes observed by electron and light microscope techniques. 21 ref. (Q26q, Q7, 3-71, M21; CN)

1300-Q. Fracture of Notched Bar Tension Specimen. Kazuo Terazawa, Midori Otani, Toshio Yoshida and Kiyoshi Terai. Tenth Japan National Congress for Applied Mechanics, Proceedings, Mar. 1961, p. 131-140.

Investigation of the characteristics of fracture stress of a mild steel bar with the notch shape changed in series by varying the notch radius, minimum diameter of notched section and notch angle while the diameter of the specimen is kept constant. Examination of crack initiation and rim effect. 13 ref. (Q27d, Q26q, 3-73; CN)

1301-Q. Eddy Currents Tried for New Roles. Steel, v. 149, July 17, 1961, p. 118-120.

Applications of nondestructive eddy current testing to measurement of core and case hardness in ferrous automobile engine components and of tensile strength and conductivity of Al

aircraft components. (Q-general, P-general, 1-54, 1-69; Fe-b, Al-b)

1302-Q. (German.) Amplitude-Dependent Damping of Steel--Its Causes and Correlations to Brittle Fracture Susceptibility. Gunter Muller-Vogt. Archiv fur das Eisenhuttenwesen, v. 32, May 1961, p. 323-330.

Investigation by free torsion oscillation of damping in 5 and 7 mm. thick specimens of unalloyed and low-alloyed steels (0.04-0.69% C), at frequencies from 25-400 oscillations per sec. and at temperatures from -8 to 40° C. (Q8, Q26, 2-61, 3-68; ST)

1303-Q. (German.) A New Method for the Evaluation of Yielding Curves of Steel at Room Temperature. Markus Reihle. Archiv fur das Eisenhuttenwesen, v. 32, May 1961, p. 331-334.

Theoretical derivation and tensile test verification of a method for evaluation of yielding curves of unalloyed and low-alloyed steels from tensile test data. (Q27, Q23b, 2-61; ST)

1304-Q. (Russian.) Effect of Small Hydrogen Contents on the Mechanical Properties of Titanium Alloys. E. V. Petunina and V. L. Poplavskaya. Metallovedenie i Termicheskaya Obrabotka Metallov, Apr. 1961, p. 25-27.

Sheet of sintered IMP 1A Ti with 0.004% H and sintered IMP 7 Ti alloy containing 0.01% H are tensile and impact tested to compare their tensile and yield strengths and the values for elongation, reduction of area and impact strength. Effect of sheet thickness on mechanical properties. 4 ref. (Q27, Q23, Q7, 2-60, 3-73; Ti-b, H)

1305-Q. (Russian.) Microstructure and Mechanical Properties of Titanium Alloys. L. S. Golubev and R. P. Shchegoleva. Metallovedenie i Termicheskaya Obrabotka Metallov, Apr. 1961, p. 28-30.

Mechanical testing of alloys containing 3% Fe, 0-3% Mn, 3-5% Cr and 0-3% Al in the forged state after holding from 700-800° C. for 1 hr. or from 400-600° C. for 100 hr. Change of hardness during artificial aging from 200-500° C. after water quenching from 900° C. 6 ref. (Q-general, 2-64, 2-65; Ti-b, Fe, Mn, Cr, Al)

1306-Q. (Russian.) Mechanical and Technological Properties of Ternary Titanium Alloys. L. P. Luzhnikov and V. M. Novikova. Metallovedenie i Termicheskaya Obrabotka Metallov, Apr. 1961, p. 31-35.

Ternary alloys of Ti with Sn, Zr, Cr, V, Mo, Al and Mn are tension tested, bend and cupping tested at room temperature and tension tested from 350 and 400° C. Tensile strength, elongation, bend strength and deep drawing properties as functions of composition and temperature. (Q-general, 2-60, 2-61, M24c; Ti-b)

1307-Q. (Russian.) Relaxation of Quenched Steel. S. S. Shurakov. Metallovedenie i Termicheskaya Obrabotka Metallov, Apr. 1961, p. 36-39.

Quenching of 12Kh2N4A steel at 1150° C. Determination of tensile strength, torsional strength, modulus of elasticity and relaxation behavior after natural aging for 15 min. to 10 days. 9 ref. (Q3, Q-general, 2-65; ST)

1308-Q. (Russian.) Changes in Strength and Structure Caused by Cycling. V. A. Parfenov. Metallovedenie i Termicheskaya Obrabotka Metallov, Apr. 1961, p. 40-44.

The alloys AD1, D16, M3, L62, BrOF, EI602 and EI437B are exposed to cyclic bending or tension from 20-850° C. to study the effect of cycling on tensile strength and crystal structure as tested by X-ray diffraction. (Q27, M26, Q5; ST, Cu-b)

1309-Q. (Russian.) Residual Stress Developing in the Case Hardening of Steel. G. K. Shreiber and A. Kan. Metallovedenie i Termicheskaya Obrabotka Metallov, Apr. 1961, p. 44-49.

Computation of the stress present in a cylindrical sample having a heated surface. Temperature distribution over the cross section. Tangential stress as a function of hardening depth. 8 ref. (Q25h, J28; ST)

1310-Q. Japan Expands Use of High-Strength Cast Irons. Tohru Taki. Foundry, v. 89, Aug. 1961, p. 115.

Chemical compositions, melting points, specific weights, tensile strength, hardness and elongation of titanium cast iron with eutectic graphite structure, Fe alloys containing Ca, irons treated with alloys containing Ca and irons treated with calcium silicide and fluorides of rare earth metals. (Q-general, P12n, P10a; CI, Ti, Ca)

1311-Q. Rhodium-Platinum Alloys. Pt. 2. A. S. Darling. Platinum Metals Review, v. 5, July 1961, p. 97-100.

Creep properties, workability, corrosion and oxidation resistance and applications in industry. 54 ref. (Q3, Q23q, R-general, R1h; Pt-b, Rh, 17-57)

1312-Q. (Czech.) Fracture Criteria of Cast Steels. Karel Stransky. Slevarenstvi, v. 9, May 1961, p. 164-168.

Tensile testing of cast carbon steel containing approx. 0.15-0.45% C and low-alloy steel with up to 1.08% Ni. Samples are cast, homogenization annealed and stress relief annealed from 660-750° C. for 10 hr. with subsequent air or oven cooling. Effects of composition, relief annealing temperatures and cooling methods on fracture, deformation work, plasticity and the development of flaws. 10 ref. (Q26r, Q24, Q27, 2-60, 2-64, 3-68; ST, 5)

1313-Q. (Russian.) Use of Radioactive Tracers in the Investigation of Drawing Die Wear. P. F. Groshev. Tsvetnye Metally, Mar. 1961, p. 71-75.

Cu wire is drawn through a radioactive drawing die to study the distribution of wear products on the wire surface and within the lubricant. Drawing die wear is determined as a function of drawing speed. 4 ref. (Q9, W24n, 1-59)

1314-Q. (Czech.) Effect of Vanadium and Titanium on the Properties of Steel Used for High-Strength Tubing. Roman Sejnoha. Hutnicke Listy, v. 16, May 1961, p. 351-355.

Mechanical properties of 20 MnSiCrMoTi and 20 MnSiCrMoV steels of Ti and V contents and tempering from 300-600° C. 16 ref. (Q-general, 2-60, 2-64; AY, Ti, V)

1315-Q. (Czech.) Effect of H on Properties of Heavier Cr-Ni-Mo Steel Castings. Ivan Zlatnik. Hutnicke Listy, v. 16, May 1961, p. 325-335.

Development of flaws, microstructure, tensile strength, elongation, reduction of area and fracture as functions of ingot weight, cross section of forgings heat treatment and hydrogen content. 41 ref. (Q-general, Q26, 2-60, 2-64; AY, H, 5, 9)

1316-Q. (German.) Cobalt Alloyed Materials for Gas Turbine Construction. Hans R. Kautz and Horst Gerlach. MTZ (Motortechnische Zeitschrift), v. 22, Apr. 1961, p. 134-139.

Investigation of creep and resistance to thermal shock of forged and precision investment cast alloys containing 10-55% Co. Evaluation of material requirements for application in gas turbine parts including scale and corrosion resistance and rupture behavior. (Q3, Q10a, R-general, 2-60, W11m; Co-b, 17-57)

1317-Q. A Bifurcation Phenomenon of Static Friction. F. F. Ling and R. S. Weiner. American Society of Mechanical Engineers, Transactions (Journal of Applied Mechanics), paper no. 61-APM-7, 1961, 5 p.

Measurements of electrical contact resistance, actual contact area, static friction, adhesion and pure shear for Pb on Pb. The data exhibit a statistical bifurcation of friction below extreme pressures, there are two branches of the co-efficient of friction versus normal load relationship. (Q9p; Pb)

1318-Q. Metallic Contact and Friction Between Sliding Surfaces. M. J. Furey. ASLE (American Society of Lubrication Engineers) Transactions, v. 4, Apr. 1961, p. 1-11.

Electrical resistance measurements in the surfaces of a fixed ball rotated against a cylinder, both of 52100 steel, using mineral oil as a lubricant. Metallic contact, friction and surface damage are determined as functions of speed, time, load and lubricant viscosity and composition. 14 ref. (Q9p, P15g, 1-54, 3-67, 18-73; ST)

1319-Q. Development of Iron-Base Seal Materials for High Temperature Applications. Robert J. MacDonald. ASLE (American Society of Lubrication Engineers) Transactions, v. 4, Apr. 1961, p. 12-19.

Rotative rubbing tests on powder metallurgy produced M-10, H-41, M-2 and M-36 toolsteels and Fe-base alloys containing Mo(5-20%) and Co(0-20%) for 5 hr. under 18 psi. load. Friction coefficient and wear are measured as functions of rubbing velocity (16-150 fps.), temperature (68-1200° F.) and atmosphere (air or nitrogen) to determine applicability in rubbing seals.

6 ref. (Q9, 2-62, 3-67; Fe-b, TS, Mo, Co, 6-72, 17-57)

1320-Q. The Performance of Ball Bearings in Nitrogen and Carbon Dioxide at Elevated Temperatures. K. G. Eickhoff and A. White. ASLE (American Society of Lubrication Engineers) Transactions, v. 4, Apr. 1961, p. 39-49.

Bearings of 52100 steel and 440 C stainless steel are tested in nitrogen from 200-250° C. and in carbon dioxide from 325-375° C. at a speed of 100 rpm. Life and wear are determined as functions of thrust load, temperature, atmosphere and lubrication with solid MoS_2. (Q9, T7d, 2-61, 17-52; ST, 17-57)

1321-Q. Evaluation of Ball Bearing Separator Materials Operating Submerged in Liquid Nitrogen. W. A. Wilson, K. B. Martin, J. A. Brennan and B. W. Birmingham. ASLE (American Society of Lubrication Engineers) Transactions, v. 4, Apr. 1961, p. 50-58.

Stainless steel ball bearings with separators, of either metal, phenolic or filled polytetrafluoroethylene are tested under a thrust load of 144 lb. and a speed of 350 rpm. at cryogenic temperatures. Bearing life, wear and torque are measured as functions of separator composition and configuration. 4 ref. (Q9, T7d, 2-63, 17-52; SS, SGA-c, 17-57)

1322-Q. A New Way to Specify Strength of Metal-Powder Parts. R. Talmage and H. L. Kee. Product Engineering, v. 32, July 31, 1961, p. 44.

Use of the hardness-tensile strength correlation in sintered metal powders and in wrought or cast metals as an index to their strength and quality. Brinell hardness-ultimate tensile strength relationship for steels, brasses, bronze, Al alloys and other alloys. (Q27a, Q29n, S22; ST, Cu-n, Cu-s, Al-b)

1323-Q. (German.) Measurement of Internal Stresses in Steel by X-Rays. Jaakko Salokangas. Materialprufung, v. 3, June 1961, p. 225-227.

X-ray measurement (swivelling technique, Cr radiation, 45° angle of incidence) of residual stresses in bending-stressed steel sheet specimens (0.12% C). Application of method to examination of a failed crusher shaft to determine cause of failure. 10 ref. (Q25, S13e; ST)

1324-Q. Grease Lubrication Studies With Plain Journal Bearings. L. J. Bradford, E. M. Barber and J. R. Muenger. Journal of Basic Engineering (ASME Transactions), Series D, v. 83, June 1961, p. 153-161.

Determination of the rheodynamic lubricating behavior of grease and oil based films on cast bronze plain journal bearings (Cu, Pb, Sn, -80:10:10) from 85-130° F.) Effects of variation of load, speed, clearance, feed rate and viscosity upon co-efficient of friction. 11 ref. (Q9p, 18-73, T7d; Cu-s, 17-57)

1325-Q. The Volume of Stressed Material Involved in the Rolling of a Ball. R. C. Drutowski. Journal of Basic Engineering (ASME Transactions), Series D, v. 83, June 1961, p. 162-168.

The threshold contact stress, the constant of proportionality between rolling force and stressed volume and the contact stress at which plastic deformation is initiated determined for 1020 and 52100 steel balls of different diameters on a flat plate. 4 ref. (Q25, Q24, T7d, 3-73; ST, 17-57)

1326-Q. Theory of Lubrication and Failure of Rolling Contacts. B. Sternlight, P. Lewis and P. Flynn. Journal of Basic Engineering (ASME Transactions), Series D, June 1961, p. 213-226.

The influence of fluid lubricants on the rolling contact fatigue life of 202 steel ball bearings, cylinders and disks is determined from 20-135° F. using compounded oils. Dynamic stress in two contacting cylindrical bodies are measured by photoelastic techniques. The pressure and temperature distribution within the contact zone of rolling disks are analyzed with a hypothesis given for the failure mechanism. 29 ref. (Q7, T7d, 2-60, 18-73; ST, 17-52, 17-57)

1327-Q. Experimental Investigation of Corners in the Yield Surface. Aris Phillips and G. A. Gray. Journal of Basic Engineering (ASME Transactions), Series D, v. 83, June 1961, p. 275-288.

Thin-walled tubes of annealed commerically pure Al (2S-O) are tested with various combinations of axial tension and torsion along nonradial paths of loading with measurement of the change

in the yield surface during loading and determination of the existence of pointed vertices. 20 ref. (Q24c, 3-66; Al-a)

1328-Q. The Influence of Elevated Temperature on the Strength of Expanded Tube Joints. Journal of Basic Engineering (ASME Transactions), Series D, v. 83, June 1961, p. 315-316.

Specimen tubes of 16-gage 1020 and mild steel are swaged into disks (4 in.) of similar material. Joints produced are tested at 1000° F. for several hours with determination of the leak resistance, joint shear strength and the residual elastic stress as a function of temperature and pressure. 5 ref. (Q-general, 2-62; ST, 4-61, 7-56)

1329-Q. New Copper-Zirconium Alloy Can Improve Resistance Welding. Harold Kruitbosch. Welding Design & Fabrication, v. 34, July 1961, p. 60-61.

Physical and mechanical properties of Electroloy Z, containing a maximum of 0.15% Zr alloyed with 99.9% pure Cu for use in resistance welding electrodes. (Q-general, P-general, W29h; Cu-b, Zr, 17-57)

1330-Q. (French.) How to Guarantee Nonbrittleness of Structural Steel Grades Within the Framework of a Specification. E. de Kerversau. Revue de Metallurgie, v. 58, May 1961, p. 393-400.

Test based on the transition temperature which is related to a minimum level of roughness which is low enough to be within the brittleness range but, at the same time, sufficiently high to remain significant. 12 ref. (Q23; ST)

1331-Q. (French.) A Machine for the Study of Isothermal Relaxation. E. Pouillard. Revue de Metallurgie, v. 58, May 1961, p. 407-415.

Special equipment for relaxation tests at room and elevated temperatures; use of machine for the study of the relaxation of Cr-Mo-V steel rod for prestressed concrete. (Q3a, 1-52; AY)

1332-Q. (Swedish.) Comparison Between Results Obtained With Standard V-Notch Impact Test Specimens and Miniature Test Specimens. G. Malmberg. Jernkontorets Annaler, v. 145, Apr. 1961, p. 183-204.

No clear indication is found of any difference in standard deviation between the converted impact values obtained with test specimens of three different sizes. As the type of material greatly influences the numerical values of the conversion factor and of the transition range displacement of the comparative curves, it is necessary to determine these quantities for each grade of steel to be tested. (Q6, Q23s, 3-73; ST)

1333-Q. Plastic Stress-Strain Relationships--Further Experiments on the Effect of Loading History. J. Parker and J. Kettlewell. American Society of Mechanical Engineers, Paper no. 61-APM-24, 1961, 8 p.

Tests are conducted on thin closed-end alpha brass tubes subjected to various combinations of torque and internal pressure. Effect of loading, unloading and reloading along different paths. 7 ref. (Q25n, 3-74; Cu-n, 4-60)

1334-Q. Exhaustion of Ductility by Hot Straining--An Explanation of Fracture Initiation Close to Welds. C. Mylonas and K. C. Rockey. Welding Journal, v. 40, July 1961, p. 306s-310s.

Plastic compression or extension at 400-600° F. greatly reduce the subsequent ductility of mild steel bars when subjected to tension at 75 and -16° F. This exhaustion of cold ductility by hot extension occurs during cooling of welded plates and provides explanation of brittle fracture close to welds. 24 ref. (Q23p, Q26s, 2-61, 3-68; CN, 7-51)

1335-Q. Transition Temperature From Test Bars Using a Strain Aged Initiation Site. Claes Pfeiffer. Welding Journal, v. 40, July 1961, p. 311s-314s.

Strain aged zones are used as the initiation point for brittle fracture in test bars in drop-weight and notched tensile tests from -110 to 0° F. Comparison is made with techniques using test bars with brittle weld metal as the initiation site. Results of impact tests on A203, A285, A302, A212 and SIS 14 14-11 steels. 5 ref. (Q23r, Q6, Q27d, N7e, 2-61, 2-64; AY)

1336-Q. Effect of an Irregular Notch on Subsize Impact Data. A. L. Lowe, Jr. Welding Journal, v. 40, July 1961, p. 315s-316s.

Two series of subsize Izod impact specimens are tested to determine the

correlation of V-flat root notch and V-round root notch impact data for a 1.25% Cr and 0.5% Mo steel. Impact properties are evaluated in terms of energy absorption, lateral expansion, fracture appearance and effect of notch geometry on transition temperature. (Q6, Q23s, Q23r, 3-73; AY)

1337-Q. (Russian.) Physical Equations on the Mechanics of a Body Under Deformation in the Theory of Mechanical Treatment of Metals by Pressure. I. Ya. Tarnovskii, A. A. Pozdeev and L. V. Meandrov. Izvestiya VUZ--Chernaya Metallurgiya, Apr. 1961, p. 67-78.

Development of equations for theoretical investigation of the state of a metal body when subjected to mechanical treatment at different speeds and degrees of deformation and different temperatures with consideration of mechanical properties of the metal, plasticity and viscosity limit. 9 ref. (Q24, 2-61, 3-67, Q-general, 10-51)

1338-Q. (Russian.) Possibility of Replacing Thermal Strengthening of KH17N7YU Steel by Mechanical Strengthening. V. I. Zaitsev and A. G. Yakhontov. Izvestiya VUZ--Chernaya Metallurgiya, Apr. 1961, p. 93-96.

Required combinations of strength and plasticity as obtained by a mechanical strengthening method through varying the degree of deformation and annealing temperature. (Q27a, Q23p, 2-64, 3-68; ST)

1339-Q. (Russian.) Influence of Quenching Method on Mechanical Properties of Special Shaped Profile Strips From 4S and SKHL-4 Steels. E. S. Tovpenets, V. T. Piskun and A. R. Katenberg. Izvestiya VUZ--Chernaya Metallurgiya, Apr. 1961, p. 114-118.

Effect of heat treatment and quenching in air, water and chemical solutions at different temperatures and time periods on mechanical properties of rolled low-carbon steel and NL1, SKHL-1, SKHL-4 and 14KHGS low-alloy steels and other steels. (Q-general, 2-64; ST, 4-53)

1340-Q. (Russian.) Mechanical Properties of High-Speed Toolsteel Containing a High Percentage of Tungsten, Cobalt and Vanadium. A. N. Popandopulo. Izvestiya VUZ--Chernaya Metallurgiya, Apr. 1961, p. 119-125.

Effect of various heat treatments at different temperatures and cooling methods on mechanical properties of R18F4K8M toolsteel. 10 ref. (Q-general, 2-60, 2-64; TS, W, Co, V)

1341-Q. (Russian.) Calculation of Tension and Fatigue Curve Changes. V. M. Grebenik. Izvestiya VUZ--Chernaya Metallurgiya, Apr. 1961, p. 167-176.

Effect of changing tension on strength and durability of different steels as dependent on chemical composition, heat treatment, number of load cycles and nature of loads. 17 ref. (Q27a, Q7a, 2-60, 2-64, 3-68; ST)

1342-Q. Application of High Strength Aluminum Castings. M. L. Slawsky and F. A. Heiser. Watervliet Arsenal (Wright Air Development Division). U. S. Office of Technical Services, PB 171564, Octo. 1959. $.75.

Al castings with improved strength and ductility can be produced by careful control of foundry variables, particularly Fe contamination, process variations and specialized heat treatment. (Q23p, Q-general, 2-60, 2-64; Al-b, 5, 17-57)

1343-Q. Residual Stresses in Circular Tubes Having a History of Pressure-Induced Plastic Deformation. R. E. Weigle and M. J. Pascual. Watervliet Arsenal, U. S. Office of Technical Services, PB 171357, Dec. 1960, 12 p. $.50.

Results indicate that in the application of the autofrettage process to the fabrication of high-strength steel gun tubes it may be possible to obtain a satisfactory residual stress level without causing complete plasticity in the tube. The magnitude of the residual tangential stresses is a function of the degree of plasticity induced in the tube. (Q25, Q23, 3-68, T2m; AY, SGB-a, 17-57)

1344-Q. Preliminary Observation on the Effectiveness of Heat Treatment for the Recovery of Properties of Irradiated Steels. J. R. Hawthorne and L. E. Steele. Naval Research Laboratory. U. S. Office of Technical Services, PB 171188, Feb. 1961, 16 p. $.50.

Construction steel deteriorated by use in working nuclear reactor regains at least 50% of its notch-ductility properties when post irradiation treatments are applied. While heat treatment of A212B, A302B and A201 plate and SA 336 forging ring material that were irradiated at less than 200° F. and at 575° F. prove effective, the effectiveness of particular heat treatments are strongly dependent upon irradiation temperatures. (Q23s, Q22n, Q-general, 2-61, 2-64, 2-67; ST)

1345-Q. Radiation Effects Upon and the Recovery of the Mechanical Properties of Metals. E. N. Aqua and R. J. Allio. General Electric Company. U. S. Office of Technical Services, KAPL-2103, Oct. 1960, 33 p. $1.

Irradiation-produced mechanical property change and recovery in various metals including Mo, steel, Ni and Ti. Irradiation damage rate is a function of the type of radiation, flux, total dose and exposure temperature and is dependent on the prior history and composition of the specimen. Mechanical property damage is a two-stage process comprising dislocation source hardening and lattice hardening. The mechanism of recovery consists of the migration of poly-vacancies to clustered interstitials, or the dissipation of vacancy clusters. (Q-general, N3, 2-64, 2-67; ST, Mo, Ni, Ti)

1346-Q. The Dynamic Compressibility of Solids From Single Experiments Using Light Reflection Techniques. N. L. Coleburn. Naval Ordnance Laboratory. U. S. Office of Technical Services, PB 171686, Oct. 1960, 35 p. $1.

Study of the dynamic compressibility of solids has resulted in the development of a method to gage in a single experiment the dynamic compressibility of a solid over a relatively large pressure range. The method uses a rotating mirror smear camera to observe the behavior of the free surface of a wedge of the test material shortly after the opposite wedge surface has been struck by a plane, explosive-driven shock wave. (Q28, 1-53)

1347-Q. Elastic and Plastic Stress Equations for Hollow Cylinders and Spheres Subjected to Internal and External Pressure. V. C. D. Dawson. Naval Ordnance Laboratory. U. S. Office of Technical Services, PB 171684, Feb. 1960, 41 p. $1.25.

A study of various strength theories and methods of obtaining high-strength chambers for hypervelocity launchers developed a set of equations for the design of cylindrical and spherical high-pressure vessels. Where strength requirements are not severe, the elastic equations, together with the distortion energy theory of failure, are used. (Q25, 3-74)

1348-Q. Pressure-Differential Testing of Tubing. G. H. Symons. Materials Research & Standards, v. 1, July 1961, p. 539-541.

Determination of the soundness of a vessel by its ability to maintain a given air pressure. Two units are charged with identical air pressure, isolated from the air supply and from each other and interconnected through a U-tube manometer. Subsequently, the manometer is observed to determine whether or not a pressure differential exists between the units. (Q10; 4-60)

1349-Q. Testing Carboloy--Some Early Experiences. S. L. Hoyt. Materials Research & Standards, v. 1, July 1961, p. 546-548.

Development of hardness and strength testing techniques and metallographic examination. (Q29, Q27, M-general; W-b, C, 6-70)

1350-Q. Internal Friction in Lightly Deformed Pure Iron Wires. J. D. Fast and M. B. Verrijp. Philips Research Reports, v. 16, Feb. 1961, p. 51-65.

Internal friction of pure (99.99%) Fe wires is measured before and after subjecting them to small plastic deformation. Damping after deformation is found to be dependent on amplitude, temperature of deformation and temperature of measurement. (Q22, Q8, 3-68, 2-61; Fe, 4-61)

1351-Q. Review of Recent Developments in the Evaluation of Special Metal Properties. J. E. Campbell. Defense Metals Information Center, Batelle Memorial Institute, DMIC Memo. 112, June 27, 1961, 10 p.

Effect of cold reduction and notching on low temperature (-423° F.) tensile strength of sheet 2014-T6,

6061-T6 and 5456-H24 Al alloys, Inconel X, AISI 301 and 310 stainless steels and Ti-5Al-2.5 Sn alloy. Hydrostatic and tensile testing of H-11, MBMC no. 1, AISI 4140 and AMS 6434 steels at high temperatures. 6 ref. (Q27d, Q10b, 2-61, 3-68, 10-54; ST, Al-b, Ni-b, 4-53)

1352-Q. The Manufacture and Uses of Austenitic Manganese Steels. C. Elliott. Edgar Allen News, v. 40, June 1961, p. 127-129.

Structural and mechanical properties of Hadfield steel produced in basic electric arc furnace or duplexing system. Applications of cast, roller or forged products based on work-hardening properties developed by heat treatment. (Q-general, Q23a, 2-60, 2-64; ST-f, Mn)

1353-Q. (French.) The Process of Fatigue Ruptures in Service Conditions From Analysis of Fractures. Henri de Leiris. Revue de Metallurgie, v. 58, Apr. 1961, p. 303-313.

Structural analysis of fractures occurring in diesel motors, cylinders, pistons and alternator rotors during service. Fatigue ruptures and fractures are studied by electron micrography and nondestructive metallography. 7 ref. (Q26, Q7k, M21e, W11j)

1354-Q. (French.) Influence of the Cross Section and the Degree of Quenching on the Mechanical Properties of Heat Treated Bars. C. Simonin and A. Rabey. Revue de Metallurgie, v. 58, Apr. 1961, p. 315-320.

Comparison of the quenching characteristics of steel bars of different diameters after heating from 525-670° C. Steel alloys studied are 25CD4, 35CD4, 42CD4, 30NC11, 35NC6 and 30NCD 8 with diameters of 30, 50, 80 and 120 mm. Effect of tensile stress and bar diameter on mechanical properties. 10 ref. (Q-general, 2-64, 3-66, 3-73; AY, 4-55)

1355-Q. How Are We to Get More From Our Steels? G. O. H. Sjogren. Metallurgia, v. 63, May 1961, p. 217-220.

Reduction of sensitivity to stress raisers of strong, high-hardness steels by high surface compressive stresses developed by induction hardening. 13 ref. (Q25, 2-64; ST)

1356-Q. The Effect of Plastic Deformation and Strain Ageing on the Transition Temperature of Mild Steel. T. R. G. Williams and D. H. Hughes. Metallurgia, v. 63, May 1961, p. 233-237.

Plastic deformation of normalized mild steel lowers the transition temperature while strain aging raises it. The two effects do not cancel. 8 ref. (Q23r, Q24, N7e; CN)

1357-Q. Work-Hardening of Hexagonal Close-Packed Crystals and in the Easy Glide Region of Face-Centered Cubic Crystals. A. Seeger, H. Kronmuller, S. Mader and H. Trauble. Philosophical Magazine, v. 6, May 1961, p. 639-655.

Review of data for workhardening curves, slip-line observations and ferromagnetic measurements for metals and alloys deformed at 90-293° C., with particular reference to Cu, Cd, Zn, Ni and an Ni-Co alloy, with interpretation in terms of dislocation theory and interactions in stress fields. 23 ref. (Q23a, M26b, 2-61, 3-66, 3-68; Cu, Cd, Zn, Ni-b, Co)

1358-Q. Instrumentation for High-Speed Strain Measurement. J. M. Krafft. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 9-49.

Relationship of the distribution of plastic strain in a dynamically tested specimen with the slope of the nominal stress-strain curve and estimation in terms of plastic bar wave velocities and influence of adiabatic heating strain rate. Basic requirements for and the characteristics of gas-pressurized and impact loader high-speed testing machines. Use of bonded wire strain gages to record distortion of weigh bar. (Q24, Q25, X28j, X29q, 3-67)

1359-Q. Effect of Grain Size, Rate of Strain and Neutron Irradiation on the Tensile Strength of Alpha-Iron. J. D. Campbell and J. Harding. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 57-76.

Review of previous investigations and explanation of results in terms of dislocation theory. Impact apparatus

for tensile testing at strain rates in the order of 10^3 per sec. is used to obtain dynamic stress-strain curves for specimens of pure Fe and 0.21% carbon steel in both unirradiated conditions and after different doses of neutron irradiation. Data are given for effects of grain size and strain rate on lower yield stress, brittle behavior elongation to fracture. 20 ref. (Q27, Q23r, 2-59, 2-67, 3-67, 3-68; Fe-a)

1360-Q. Dynamic Stress and Deformation in a Mild Steel at Normal and Low Temperatures. D. B. C. Taylor and L. E. Malvern. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 77-91.

Effects of dynamic rates of strain up to 5% per sec. combined with temperatures down to -70° C. on the lower yield stress and amplitude of nonuniform plastic strain of normalized mild steel containing 0.19% carbon. Data are given for tensile properties. 6 ref. (Q23b, Q24h, 2-61, 3-67, 3-68)

1361-Q. Strain Rate Effects in Plastic Wave Propagation. F. E. Hauser, J. A. Simmons and J. E. Dorn. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 93-114.

Stress-strain-strain rate relations in high purity Al determined at 78-295° K. for strain rates of 2-12,000 per sec. Comparison between elastic plastic and strain rate theories and explanation of strain rate effects in terms of dislocation theory. 18 ref. (Q24j, Q25n, M26b, 2-61, 3-67, 3-68; Al-a)

1362-Q. Effects of Explosive Loading on Single Crystals and Polycrystalline Aggregates. C. M. Glass, Gerald L. Moss and Stanley K. Golaski. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 115-143.

Flow, fracture and structural changes developed in explosively loaded Cu and Al single crystals and polycrystalline Cu, Al and 1020 steel specimens. Analysis of time intervals within which microscopically observable structures develop; strain markings produced by explosive loading; and nature of fracture due to added stress waves. 7 ref. (Q24, Q25m, Q26, 3-67, 3-68; Cu, Al, ST)

1363-Q. Crystallographic Aspects of High Velocity Deformation of Aluminum Single Crystals. R. B. Pond and C. M. Glass. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 145-161.

Single crystal specimens of Al are extended in tension at strain rates varying from 36-2000 ips. and examined by optical and X-ray techniques. Probable existence of a von Karman critical velocity is deduced from data using velocity versus elongation technique. Orientation relations of deformation are considered as a function of velocity. 8 ref. (Q24, M26c, 3-67, 3-68; Al-b)

1364-Q. Some Properties and Applications of Shock Waves. George E. Duvall. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 165-203.

Detonations and the shock waves they produce in inert materials are described qualitatively. Equations of the shock transition are applied in an example to obtain the amplitudes of shocks produced in several solids. Methods for measuring the equations of state of solids with shock waves. Reflection of a shock wave at a free surface. Plastic yield and phase transitions are shown to produce multiple shocks in solids. (Q24j, Q6p, 3-67, 3-68)

1365-Q. Dynamic Response of Iron and Iron Alloys to Shock Waves. F. Stanley Minshall. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 249-274.

Pressures and profiles of shock waves produced by the detonation of an explosive are related to the dynamic properties of Armco iron and 1020,

1040, 1055, 4340 and 347 steels. Effects of annealing, cold rolling and carbon content. (Q6p, Q24j, 2-60, 2-64, 3-67, 3-68; Fe-b, ST)

1366-Q. A Metallurgical Method for Simplifying the Determination of Hugoniot Curves for Iron Alloys in the Two-Wave Region. C. M. Fowler, F. Stanley Minshall and E. G. Zukas. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 275-308.

Equation of state data for Fe alloyed with Ni and Cr given. Metallurgical examination of recovered specimens subjected to shock pressures is used for determination of Hugoniot curve in the two wave regions of these alloys with an error analysis being presented. 6 ref. (Q24j, 3-67, 3-68; Fe-b, Ni, Cr)

1367-Q. Metallographic Studies on Metals After Explosive Shock. Cyril Stanley Smith and C. M. Fowler. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 309-341.

Investigation of position of interaction between first shock rarefaction and second shock in Fe; influence of orientation on deformation markings in single crystals of Cu after plane shock and local shock behavior around notches; and propagation of shock in duplex sample of Fe and Cu as indicated by position of shock interaction zone and local shock direction. (Q24c, Q24, M-general, 3-67, 3-68, 3-72; Cu-b, Fe)

1368-Q. Behavior of Iron and Steel Under Impulsive Loading. E. G. Zukas and C. M. Fowler. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 343-369.

Twinning behavior of Fe under plain shock wave loading at pressures to 750 kbars. Effect of prestraining by rolling or pressing; influence of quenching or quenching and tempering treatments on behavior of shock loaded carbon steel containing 0.25-1% carbon; and effects of heat treatment on position of plastic I rarefaction--plastic II compression interaction boundaries. 12 ref. (Q24, 2-60, 2-64, 3-67, 3-68; Fe-b, ST)

1369-Q. Fracture of Solids Under Impulsive Loading Conditions. J. L. O'Brien and R. S. Davis. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 371-388.

Scabbing phenomenon associated with the reflection of a compression stress wave from a free surface is discussed in terms of previous investigations and results obtained using a multiple pellet technique to determine the pressure profile of incident compression shock. Analysis of stress for fracture of single crystal and polycrystalline Al, 2024 Al alloys and Armco iron specimens and of errors introduced by various techniques used to measure shock profiles. 11 ref. (Q24j, Q26, Q28k, 3-67, 3-68; Al-b, Fe-a)

1370-Q. Observations on Explosively Loaded Iron and Mild Steel. H. P. Tardif, F. Claisse and P. H. Chollet. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 389-407.

Deformation markings in single crystals of Fe subjected to explosive loading are found to follow conventional crystallographic law of twinning and are suggested to be mechanical twins, the number of twins decreasing proportionately to hardness. Numerous mechanical twins are found to propagate undeviated from ferrite grains into adjacent pearlite colonies in medium carbon steel indicating an orientation relationship between the pro-eutectoid ferrite and pearlite ferrite. 13 ref. (Q24b, Q24c, Q24m, 2-60, 3-67, 3-68, 3-72; Fe, CN)

1371-Q. Metallurgical Effects of High-Intensity Shock Waves in Metals. G. E. Dieter. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 409-445.

Changes in microstructure, microhardness and tensile properties produced by high intensity shock waves of explosive origin are studied for bcc. metals including Fe, Cb, Ta, 0.17%

carbon mild steel and Fe-3% Si alloys, and for fcc. Ni. Analysis of hardening of Fe due to pressure induced polymorphic transformation and electron microscopic examination of slip band structure of explosively hardened Ni. 23 ref. (Q24m, Q24j, Q27, M27, 3-67, 3-68, 3-71; Fe-b, Cb, Ta, Ni)

1372-Q. Strengthening of Austenitic Manganese Steel by Plane Shock Waves. A. H. Holtzman and G. R. Cowan. Paper from "Response of Metals to High Velocity Deformation". v. 9. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 447-482.

Changes in the microstructure and mechanical properties of austenitic, manganese steel by the passage of plane compressional shock waves. Strengthening effects are found to be pressure dependent and the strength and hardness increase rapidly with pressure between 70 and 422 kbars. Comparison with cold rolled materials and analysis of strengthening mechanisms. 16 ref. (Q-general, Q24m, Q24j, M27, 3-67, 3-68, 3-74; AY)

1373-Q. (Book.) Response of Metals to High Velocity Deformation. v. 9. Metallurgical Society of AIME. P. G. Shewmon and V. F. Zackay, Editors. 1961. 491 p. Interscience Publishers, Inc., 250 Fifth Ave., New York 1, N. Y.

Proceedings of a technical conference sponsored by the Physical Metallurgy Committee of the Institute of Metals Div. of AIME held at Estes Park, Colo., July 11-12, 1960. Topics include instrumentation for high speed strain measurement, influence of strain rate as a function of time on the stress-strain relationship of various single crystalline and polycrystalline metals, shock wave propagation and the effects of high intensity shock waves on the structure and behavior of metals. Papers are abstracted separately. (Q-general, Q24, Q25, 3-67, 3-68, A-general, 10-54)

1374-Q. Some Aspects of Bending Brittle Materials. Conan H. Spaderna. Experimental Mechanics, v. 1, Aug. 1961, p. 71-72.

Calculation of factors affecting the bending of brittle materials with example for cast iron, including tensile strain, bending strength, rupture modulus, Poisson's ratio, tangential resistance and resistance forces. (Q5, Q-general, 3-68; CI)

1375-Q. Photodot Investigation of Plastic-Strain Pattern in Flat Sheet With a Hole. P. S. Merrill. Experimental Mechanics, v. 1, Aug. 1961, p. 73-80.

Measurement of strain pattern in a flat 24St-3 Al sheet with a central hole, unidirectionally loaded into the plastic region, by the photodot method. Test results are presented with analysis of errors. 9 ref. (Q24h, 1-54; Al-b, 4-53)

1376-Q. (Translation.) Elastic Deformation and Thermal Expansion. R. I. Garber and I. A. Gindin. Soviet Physics--Solid State, v. 3, July 1961, p. 127-128. (Translation of Fizika Tverdogo Tela, v. 3, Jan. 1961, p. 3-310).

The relationship between deformation stress and the thermal expansion coefficient is derived, assuming uni-axial or homogeneous isotropic deformation. Values for the constants appearing in the relation are given for Pd, Ag, Pt, Cu, alpha iron, Ni, W and Co. (Q21, P11g, 3-66, 3-68)

1377-Q. (Translation.) Twins and Dislocations in Silicon Monocrystals. M. G. Mil'vidskii and L. V. Lainer. Soviet Physics--Solid State, v. 3, July 1961, p. 210-214. (Translation of Fizika Tverdogo Tela, v. 3, Jan. 1961, p. 3-310).

The external forms of twins, interactions between twins and dislocations and factors affecting dislocation density in twins investigated for Si single crystals including effects of twin boundaries and slip lines on dislocation movement and of original density and slip system orientation due to thermal twinning on dislocation density. 4 ref. (Q24b, Q24a, M26b; Si, 14-61)

1378-Q. (Russian.) Temperature-Time Dependence of the Strength of Hardened Steel. S. S. Shurakov. Fizika Metallov i Metallovedenie, v. 10, Dec. 1960, p. 886-895.

3Kh13 steel is oil quenched from 1100-1200° C., immersed in liquid nitrogen for 10 min. to 5 hr., tempered at 20-200° C. for 3 hr.; and 30KhN3A steel is case hardened at 910° C. in a solid medium, oil quenched from 800° C. and immersed in liquid nitrogen for 10 min. to determine the effects of testing temperature on creep strength and of tempering temperature on tensile strength and hardness. 31 ref. (Q3, Q27, Q29n, 2-61, 2-64; ST)

1379-Q. (Russian.) Effect of Quenching Temperature on the "Nitrogen Peak" of the Internal Friction of Iron. Yu. V. Piguzov and M. S. Blanter. Fizika Metallov i Metallovedenie, v. 10, Dec. 1960, p. 931-933.

Fe wire containing impurities of 0.009% C, 0.19% S, 0.008% P, 0.06% O and 26-85 x 10^{-4}% N in solid solution are held at 720-1300° C. for 1 hr. and subsequently water quenched. Internal friction measurements are performed at 20-100° C. at a vibratory frequency of 0.8 cps. 11 ref. (Q22, 2-61, 2-64, 3-69; Fe-b, N)

1380-Q. (Russian.) Change of the Mechanical Properties of Nichrome in the K-State. G. V. Starikova and A. A. Presnyakov. Fizika Metallov i Metallovedenie, v. 10, Dec. 1960, p. 943-945.

The effect of tempering at 100-700° C. for 6 hr. and of isothermal heat treatment at 450° C. is determined by tensile tests on Nichrome wire specimens. (Q-general, 2-64; Ni-b)

1381-Q. (Russian.) Fatigue Strength of Welded Beams Manufactured From Six Different Steels. A. A. Bat'. Avtomaticheskaya Svarka, Jan. 1961, p. 13-16.

I-beams are welded from 12 mm. thick sheet of St.3kp, St.3kpT, K St. 3kp, 15KhSND, 14G or 19G steel and tested to determine effects of design on fatigue, tensile, impact and yield strengths and elongation and impact strength. 9 ref. (Q-general, Q7; ST, 7-51)

1382-Q. Variation in the Properties of Galvanized Steel Wire as a Function of the Coating Speed. F. Baldi and A. Pirozzi. Wire Industry, v. 28, July 1961, p. 669, 701.

Mechanical properties of steel wire after galvanizing with heavy Zn coatings. Effect of coating speed and wire diameter on tensile, elongation, reduction in continuous torsion and alternating bend strength. (Q-general; ST, 4-61, 8-65)

1383-Q. Ultrasonic Attenuation in Tin Single Crystals at Low Temperatures. Kazuo Kamigaki. Physical Society of Japan, Journal, v. 16, June 1961, p. 1141-1144.

Ultrasonic attenuation coefficient and velocity in the superconducting and normal states of Sn single crystals are measured at 1.5 and 4.2° K. 12 ref. (Q21f, 2-63; Sn, 14-61)

1384-Q. (Russian.) Plasticity of Several Steels at High Temperatures. V. Ya. Tarnovskii, G. A. Hasin, A. A. Pozdeev and L. V. Meandrov. Izvestiya VUZ--Chernaya Metallurgiya, Dec. 1960, p. 63-69.

Mechanical properties of 18 alloy steels investigated from 800-1250° C. to determine tensile and impact strengths, elongation and contraction in area as influenced by alloy, temperature, strain rate and rolling orientation. (Q-general, Q23, 2-60, 2-62, 3-68, 3-72; AY)

1385-Q. (Russian.) Effect of Temperature and Hot Forging Time on the Properties of Large Steel Ingots. N. P. Braun, B. B. Vinokur, E. I. Mirovskii and A. L. Geller. Izvestiya VUZ--Chernaya Metallurgiya, Dec. 1960, p. 111-113.

Analysis of 55H, 50HM and 35HNM steels forged from 1230-1250° C. to determine yield strength, yield point, reduction in area, elongation and toughness with relation to composition, forging time and temperature and location of test specimen in cross section of sample. 12 ref. (Q-general, F22, 2-60, 2-61, 3-68; ST, 4-51)

1386-Q. (German.) Contribution to Short-Time Creep Strength of Platinum Alloys Between Room Temperature and 1250° C. Pt. 2. G. Reinacher. Metall, v. 15, July 1961, p. 657-665.

Creep testing and microstructural investigation of heat treated wire specimens containing 5-10% Rh or Ir, 4% Pd or 5% Au at 20-1250° C. (Q3, M27, 2-60, 2-61; EG-c31, Pt-b, Ir, Rh, Pd, Au)

1387-Q. (German.) Plastic Deformation of Beryllium. H. Weik. Metall, v. 15, July 1961, p. 686-694.

Crystal structure and plastic deformation mechanism of polycrystalline Be and Be single crystals. Means for improving workability and elimination of crack formation. Study of grain refinement, control of deformation texture and surface quality and methods for cladding and plating. (Q24, Q23q, Q26, L-general, M-general; Be)

1388-Q. Static Friction Between Clean Copper Single Crystal Surfaces. Riitsu

Takagi and Yuko Tsuya. Wear, v. 4, May-June 1961, p. 216-227.

Static friction between two very clean oxide-free Cu single crystal (001) planes is studied by applying a horizontal force in a direction parallel to either (100) or (110) to a sphere placed on the horizontal surface of a fixed cube of the same crystallographic orientation. Cross sections, longitudinal sections and layer sections of the lower crystals are examined with an optical microscope, electron microscope and microhardness tester to find the extent of the occurrence of phenomena such as deformation, adhesion, shearing and internal strain which accompany the friction and to clarify the mechanism. 9 ref. (Q9p, Q24, M26, 3-68; Cu, 14-61)

1389-Q. Low-Frequency Measurements on the Bordoni Internal Friction Peak in Copper. D. H. Niblett. Journal of Applied Physics, v. 32, May 1961, p. 895-899.

Torsion pendulum measurement of the internal friction of cold worked specimens at 4-300° K. at a frequency of 10-20 cps. The Bordoni internal friction peak is observed in pure polycrystalline Cu at 62° K. at 13.4 cps. A value of 0.14 ev. is deduced for the activation energy by comparison. 15 ref. (Q22, 2-63, 3-67; Cu)

1390-Q. Third Order Elastic Moduli of Germanium. T. Bateman, W. P. Mason and H. J. McSkimin. Journal of Applied Physics, v. 32, May 1961, p. 928-936.

Elastic moduli are determined by measuring ultrasonic velocities in selected directions when directed static stresses are applied to the crystal. Three measurements are obtained by hydrostatic pressures, three by a static compression along the (001) axis and six by stressing the (110) axis. 14 ref. (Q21, 3-66, 3-72; Ge)

1391-Q. Smooth Spalls and the Polymorphism of Iron. John O. Erkman. Journal of Applied Physics, v. 32, May 1961, p. 939-944.

When Armco iron is loaded with a transient wave in which the pressure exceeds 0.131 megabar, smooth spalls are observed, the two distinct compression shocks transmitted by the Fe being followed by a steep rarefaction called rarefaction shock. The interaction of these waves results in a localized tension of destructive magnitude, producing smooth fracture. 10 ref. (Q24j, Q26, 3-71; Fe-a)

1392-Q. (Italian.) Heat Resisting Steels and Alloys Used in the Construction of Gaseous Case Hardening Heat Treatment Furnaces. Gilles Pomey. Il Nickel, no. 91, Apr. 1961, p. 1-11.

Mechanical properties of nickel-chromium steels and Ni-Cr and Fe-Cr alloys used in the construction of heat treatment furnaces and their behavior when subjected to high temperatures in carburizing, carbonitriding, nitriding and oxidizing atmospheres. Design considerations are given for selecting steels and optimum heat treatment techniques. (Q-general, 2-62, W27n; SGA-h, ST, Ni-b, Cr-b, 17-57)

1393-Q. (German.) Influence of Materials in Friction on Contacts Between Solids in Cold Working. Heinrich Wiegand, Karl Heinz Kloos and Klaus Muller. Stahl und Eisen, v. 81, July 6, 1961, p. 924-933.

Investigation of friction and lubrication during cold heading by measurement of friction coefficient and surface roughness in plasticizing involving slip under pressure, with and without isolation or lubrication, of materials including 105 W Cr 6 steel (Ni coated and noncoated), X 120 Cr 12 steel (TiC coated and noncoated, nitrided and nonnitrided) and AlMBz bronze. (Q9n, 3-68, 18-73, G10; ST, Cu-s)

1394-Q. The Effect of Heat Treatments on the Structural Stability of Sintered Aluminium Products. Niels Hansen and Eivind Adolph. Danish Atomic Energy Commission, Research Establishment Riso, Metallurgy Laboratory. Riso Rept. no. 25, May 1961, 37 p.

Degassing and heat treating plate, rod and tubing of sintered Al at temperatures between 400 and 640° C. in a vacuum and in air to determine effect of time and temperature of heat treatment on microstructure, gas content and stress. 9 ref. (Q-general, C5, 2-64; Al, 6-72)

1395-Q. Cracked Extrusion Billets. W. W. Frank. Modern Metals, v. 17, July 1961, p. 60-61.

Ultrasonic and dip-stick testing of 6061, 6062 and 6063 Al alloys and its effect on cracking of extrusion billets. Effect of pouring temperature and rate, alloy involved, nucleation agents, water temperature

and pressure and billet diameter. (Q26, 2-60, 2-61, 3-73, S13g; Al-b, 4-52, 4-58)

1396-Q. (Czech.) Effect of Heat Treatment on Mechanical Properties of 13% Chromium Steels. Stanislav Drapal. Hutnicke Listy, v. 16, Feb. 1961, p. 120-128.

Macrostructure and sulphur segregation of 6 melts with different carbon contents (0.05-0.034%) are studied on cast wedge-shaped test pieces. Effects of carbon content, testing temperature, homogenization, austenitization at 950-1150° C., tempering at 650-750° C. and cooling velocity on tensile, yield and impact strengths, elongation and reduction of area. 5 ref. (Q-general, M27, 2-60, 2-61, 2-64; AY, Cr)

1397-Q. (Czech.) Embrittlement of AK 1 Steels Containing 13% Chromium. Jaroslav Koutsky and Josef Teindl. Hutnicke Listy, v. 16, Feb. 1961, p. 129-135.

Samples are quench hardened at 900-1100° C., annealed for 2 hr. at 750° C. and subsequently air cooled or oil quenched and subjected to a second annealing at 400-650° C. Effects of heat treatment on fracture, hardness, tensile, yield and impact strengths, ductility and transition temperature. 11 ref. (Q26s, Q-general, 2-64; AY, Cr)

1398-Q. Development Promises More Uniform Wheel Grading. L. V. Colwell, R. O. Lane and K. N. Soderlund. Grinding and Finishing, v. 7, Aug. 1961, p. 26-27.

Test method for determining wheel hardness using a two-component lathe dynamometer and a crushing wheel. 4 ref. (Q29, 1-53, 1-54, W25c)

1399-Q. (Russian.) Deformation as a Function of Toughness During Treatment Under Pressure at High Temperatures. I. Ya. Tarnovskii, A. A. Pozdeev, L. V. Meandrov and G. A. Khasin. Izvestiya VUZ--Chernaya Metallurgiya, Mar. 1961, p. 82-90.

Experimental investigation of 16 alloy steels to develop parameters for calculating deformation resistance as a function of the toughness properties of steel. Observations are made at various temperatures and pressures of deformation and mechanical plasticity. Coefficients of toughness for various temperatures and conditions of deformation are derived. 4 ref. (Q-general, 2-60, 3-68, 3-74)

1400-Q. (Russian.) Hardening and Softening of Austenitic Steels During Relaxation of Tension. Ya. S. Gintsburg. Izvestiya VUZ--Chernaya Metallurgiya, Mar. 1961, p. 126-133.

Investigation into the character and intensity of the relaxation process of austenitic steels produced in a high-frequency furnace as dependent on chemical, physical and mechanical properties and on temperature. 5 ref. (Q27c, Q3, P-general, 2-60, 2-61; ST, 1-69)

1401-Q. (Italian.) Brittle Fracture of Steels Seen From the Constructor's Point of View. Ugo Guerrera. Rivista Italiana della Saldatura, v. 13, Jan-Feb. 1961, p. 3-9.

Behavior of several structural steel specimens under tensile load and at different temperatures. Influence of design and selection of steels to suit particular applications. (Q26s, 2-61, 3-68; ST, SGB-s)

1402-Q. (French.) Testing of Bearing Wear by Use of Radioactive Isotopes. D. Pavelescu, I. Iliuc, S. Barbul, E. Procopovici, M. Nastase and V. Constantinescu. Revue de Mecanique Appliquee, v. 6, Jan 1961, p. 77-90.

The wear of cast iron sliding friction between cast iron and steel is measured by pressing a cast iron block containing the radioactive isotope Fe^{59} against a rotating steel shaft. Rumanian oil no. 405 is used as a lubricant and its Fe^{59} content is tested for various times, rpm. and contact pressures. 9 ref. (Q9, 1-59; CI, ST, NM-h)

1403-Q. (Italian.) Tear-Testing of Light Alloy Sheets. L. Mori. Alluminio Nuova Metallurgia, v. 30, May 1961, p. 241-248.

Description and analysis of the tear-test as applied to welded Pe 35 R, Av 24, TN, Eg 65 Ta and Pe 35 H_2O alloy sheets stressed at different temperature. Results are compared

to those obtained by conventional tensile testing. 11 ref. (Q5; Al-b, 4-53)

1404-Q. German Commentary on Turbine Failures. S. Ammareller and P. Gruen. Metal Progress, v. 80, Aug. 1961, p. 89-91.

Failures in Europe in the 1920's led German metallurgists to use a low-alloy steel of good hardenability, oil quenched and tempered for high strength and ductility. Recently, vacuum pouring has eliminated danger of flaking. (Q26, Q25, J26; AY, 4-51)

1405-Q. Residual Welding Stresses in Aluminum Alloys. H. N. Hill. Metal Progress, v. 80, Aug. 1961, p. 92-96.

Fusion welding produces residual stresses in the vicinity of the weld that are about equal to the minimum yield strength in the heat affected zone. These stresses do not impair the ability of a welded structure to resist static or impact loading. (Q25h, K9; Al-b)

1406-Q. Creep Tests on a Flake Graphite Cast Iron at 350° C. K. B. Palmer. BCIRA Journal (British Cast Iron Research Assoc.), v. 9, July 1961, p. 537-539.

Results of tests at 350° C. are compared with tests at 400° C. Variation of modulus of elasticity with tensile stress at 350° C. It is shown that cast iron may be used advantageously at temperatures up to at least 343° C. (Q3, 2-61, Q21a, 3-66; CI)

1407-Q. Residual Thermal Stresses in Compression Ignition Engines. A. Dearden. BCIRA Journal (British Cast Iron Research Assoc.), v. 9, July 1961, p. 540-559.

Failure (cracking) of cylinder heads, pistons and cylinder liners composed of nodular iron and gray iron due to high operating temperatures and subsequent cooling. Results of thermal cycling tests and engine test bed investigations. 8 ref. (Q26, Q25h, Q25p, T21b; CI)

1408-Q. Impact Extrusions Offer Better Properties at Lower Costs. Precision Metal Molding, v. 19, July 1961, p. 28-29.

Comparison of impact extrusions to castings and forgings in terms of surface smoothness, tolerances, strength to weight ratios and economic factors. Use of impact extrusions in the production of pistons. Thermal expansion control. (Q27, S15, T21b; 4-58, 4-51, 5, 17-55)

1409-Q. Hydrogen Embrittlement of Tantalum in Aqueous Media. Claude R. Bishop and Milton Stern. Corrosion, v. 17, Aug. 1961, p. 85-91.

Prevention of Ta embrittlement in aggressive reducing acid media by contact with a small area of Pt. Corrosion rate is not increased by such contact and in some cases decreases. Results of experiments show that Ta is successfully protected at various temperatures and under conditions of cathodic charging. 17 ref. (Q26s, R6g, R10g; Ta)

1410-Q. (Spanish.) Delayed Failure of High Strength Steels. Arturo Rodriques de la Pena. Tecnica Metalurgica, v. 16, Nov-Dec. 1960, p. 232-242.

Notched and unnotched samples are heated up to 850° C. and slowly cooled to determine the effect of hydrogen absorption, caused by electrolytic treatment, on reduction of area and on delayed failure of notched samples. 14 ref. (Q7, 2-69; ST, SGB-a)

1411-Q. (Ukranian.) Effect of Plastic Deformation on Fatigue Strength of Heat Resistant Alloys. M. I. Chernyak. Dopovidi Akademii Nauk Ukrainskol RSR, Feb. 1961, p. 173-174.

Bend-torsion test of Ni-base alloys at room temperature and 700° C. Endurance limit in relation to deformation degree and temperature. (Q7a, Q1, Q5, 2-61, 3-68; Ni-b, SGA-h)

1412-Q. Frictional Behavior of Sodium-Lubricated Materials in a Controlled High-Temperature Environment. C. M. Allen J. W. Kissel and W. A. Glaeser. American Society of Mechanical Engineers, Paper No. 61-LUBS-16, 1961, 9 p. $1.

Frictional behavior between Mo, W, tungsten carbide and titanium carbide sliding-contact specimens is studied from 80-1300° F. at a speed of 0.2 mm. per sec. and a load of 100,000 psi. Experiments are performed in argon-swept vacuum, both dry and with molten Na at the specimen interface. 9 ref. (Q9p, 18-73, 2-61, 3-68; Mo, W, 14-68)

1413-Q. (German.) Investigation of Cold-Stretched Steels. K. Kloppel and R. Schardt. Stahlbau, v. 30, July 1961, p. 193-202.

Separate investigations of strain-hardening and stress aging in cold working using a model of similar deformation characteristics. Tensile testing of welded steel specimens (0.10-0.14% carbon) before and after annealing (400-1000° C.) Investigation of plastic behavior by bending tests and examination of fatigue properties as influenced by cold working. (Q23, Q27, F-general, 1-67; ST, 2-60, 2-64, 2-68, 7-51)

1414-Q. (Italian.) Brittle Fracture. Alberto Nacher. Rivista Italiana della Saldatura, v. 13, Mar. 1961, p. 109-129.

Study of the behavior of metals subjected to nonfatigue testing. Mechanism of the propagation of the brittle fracture. Analysis of basic tension testing and of the mechanics of the material. (Q26s, 1-54)

1415-Q. Low Endurance Fatigue of a Mild Steel and an Aluminium Alloy. P. P. Benham and Hugh Ford. Journal of Mechanical Engineering Science, v. 3, June 1961, p. 119-132.

Axial load and strain cycling tests are performed on hot rolled mild steel and D.T.D. 683 Al alloy at frequencies between 5-15 cycles per min. for endurances from monotonic tension to 50,000 cycles. Mean loads or strains of zero and half the maximum in tension are studied. Two mechanisms of fracture are found for mild steel. 27 ref. (Q7, 3-66, Q26; CN, Al-b)

1416-Q. Reactor Materials and Radiation Damage. G. E. Darwin and A. A. Johnson. Nuclear Power, v. 6, Aug. 1961, p. 64-65.

Damage flux determinations, focusing collisions, direct and indirect methods of observing defects, irradiation hardening, fracture, corrosion, growth and swelling are discussed in terms of the yield stress/grain size relation for Cu, En2 steel, Mo and pure iron. 4 ref. (Q-general, 2-67, T11; Cu, Fe, Mo, ST)

1417-Q. Redesign of Trailer Castings Offers Greater Strength, Lighter Weight. Joe W. Beckham. Current Engineering Practice, v. 3, June 1961, p. 28-31.

Design innovations on brake shoes, hubs, winch housing end plates and axle seats as determined by direct measurement of strain on the surface of the working part by stresscoat and electric strain gages. (Q25, 1-54, T21; ST, 5)

1418-Q. Making Steels of Very High Strengths. Arthur Kenneford. New Scientist, v. 11, Aug. 3, 1961, p. 272-273.

Effects of various alloy additions and heat treatment. Examples are given showing effect of Cr and Si on volume change at phase transformation and effect of tempering on hardness of quenched experimental steel. (Q29n, P10d, 2-60, 2-64; ST, Cr, Si)

1419-Q. Halt Hydrogen Embrittlement of Tantalum. Union Carbide Metals Review, v. 4, Summer 1961, p. 25.

Sputtering, spot welding, electrodeposition, riveting or mechanical attachment of Ta to an extremely small spot of Pt in the ratio of 10,000 Ta to one Pt. Tests show that Ta so contacted retains its ductility for more than 1000 hr. in concentrated HCl at 374° F. (Q26s, Q23p, 2-60; Ta, Pt)

1420-Q. (German.) Magnetic Determination of Yield Point of Steels. Paul Reti. Fertigungstechnik und Betrieb, v. 11, June 1961, p. 389-342.

Method and apparatus for evaluation of yield point by continuous measurement of magnetic permeability in tensile stressing of metal specimens. Applicability of method for Cr, CrV, M 125, M 175, C 45 and W 31 steel. (Q24c, P16q, 1-54; Cr, ST)

1421-Q. (French.) Marine Propellors of Cu-Al With Ni. R. F. Poirot. Revue du Nickel, v. 27, May-June 1961, p. 63-71.

Elasticity, Brinell hardness, corrosion fatigue and sea water erosion due to cavitation of Cu-Al propellors with additions of Mn, Ni, Fe, Si and Sn. 5 ref. (Q21, Q29n, R1e, R4b, T22h; Cu-b, Al, Ni)

1422-Q. (French.) Possibilities of Using 9% Ni-Steel for Constructing Welded Reservoirs to be Used in Storing or

Transporting Liquified Gas--Operation "Cryogenics". Revue du Nickel, v. 27, May-June 1961, p. 72-80.

Nickel steel rectangular and cylindrical reservoirs are studied under conditions of high pressure and low temperature to determine their usefulness as storage and transport containers for liquid propane, ethylene, methane, oxygen, nitrogen, hydrogen and He. Rupture load elastic limit, Charpy v-notch resilience and effects of welding. (Q3m, Q21, T26q; AY, Ni, 7-51)

1423-Q. (Translation-Brutcher no. 4996.) Shot Peening and Heat Treatment of Trolley-Bus Axle Shafts. N. Ya. Volnak. Metallovedenie i Termicheskaya Obrabotka Metalloy, Nov. 1959, p. 40-42.

Previously abstracted. See item 232-Q, 1960. (Q7a, G23n, 2-64; ST)

1424-Q. (Translation-Brutcher no. 4997.) Effect of Surface Hardening on the Fatigue Strength of Gear Teeth. G. Z. Zaitsev. Metallovedenie i Termicheskaya Obrabotka Metallov, Nov. 1959, p. 43-44.

Previously abstracted. See item 233-Q, 1960. (Q7a, T7a, J28; ST)

1425-Q. (Translation-Brutcher no. 5216.) Effect of Molybdenum Upon Properties of 18% Cr-12% Ni Stainless Steel. R. Nakagawa and Y. Otoguro. Tetsu-to-Hagane (Iron and Steel Institute of Japan, Journal), v. 46, Mar. 1960, p. 377-379.

Effect of Mo additions of 0.85 to 3.70% upon stainless steel having carbon contents of 0.02, 0.10, 0.20 and 0.28%. X-ray analysis of electrolytically extracted precipitates for the nature of Mo-containing carbides. Tensile properties at room and elevated temperatures. (Q-general, 2-60; SS, Mo)

1426-Q. (Translation-Brutcher no. 5146.) Measurement of Surface Temperatures in Sliding Friction. A. G. Nikonov and G. N. Klebanov. Izvestiya VUZ--Chernaya Metallurgiya, Feb. 1961, p. 122-127.

Study of heating and cooling conditions in zones located at various distances from the friction surface of steel specimens. Data on thermal cycles at different distances from friction surface; temperature distribution across specimen section. Temperature at friction face; heating rate in hardened layer; formation of range of minimum austenite stability and cooling rate therein. (Q9p, S16b; ST)

1427-Q. Metallic Fatigue. W. J. Harris. 1961. 331 p. Pergamon Press Inc., 122 E. 55th St., New York 22, N. Y. $12.50.

Survey of the major factors affecting fatigue behavior of metals associated with flight structure with particular reference to certain standard aircraft fabrication and finishing processes. Theoretical considerations of stress concentration, frequency effects, corrosion, fretting and crack propagation. 376 ref. (Q-general, T24a, 1-53, 10-52)

1428-Q. (Russian.) Effect of Increased Oxygen and Nitrogen Content on the Mechanical Properties of Titanium. E. V. Petunina. Metallovedenie i Termicheskaya Obrabotka Metallov, June 1961, p. 50-53.

Technically pure Ti with 0.18-0.54% O and 0.035-0.105% N is subjected to mechanical testing at 20-500° C. Effect of the two elements on tensile, yield, impact and bends strengths, elongation and area reduction. (Q-general; Ti, 3-69)

1429-Q. (Russian.) Effect of Calcium on the Plasticity of the Alloy EI 765. S. A. Iodkovskii and A. S. Loboda. Metallovedenie i Termicheskaya Obrabotka Metallov, June 1961, p. 57-59.

Effect of 0.1-0.3% Ca added in metallic form to the melt, on microstructure and elongation and reduction of area determined in creep tests at 700° C. (Q23p; AY, AD-n32, Ca)

1430-Q. Die Cast Zinc Meets Competitive Demands. Jack H. Schaum. Modern Castings, v. 40, Aug. 1961, p. 34-37.

Mechanical properties, physical constants and casting characteristics of Zn alloys as compared to Al and Mg alloys. Applications of Zn die castings in automobile components. (Q-general, E25p, P-general, T21; Zn-b, Al-b, Mg-b, 5-61)

1431-Q. Centrifugally Cast Steel Cylinders Rapid Gas Heating Techniques.

A. Ayvazian. Modern Castings, v. 40, Aug. 1961, p. 73-80.

Comparison of yield and tensile strengths, elongation, reduction of area, impact strength and grain size of conventionally heat treated 4330 steel centrifugally cast cylinders and those hardened and tempered in rapid-heating gas furnaces. (Q-general, M27c, 2-64; AY, 5)

1432-Q. Cast Nickel Containing Aluminum Bronze Properties and Microstructure. E. Belkin. Modern Castings, v. 40, Aug. 1961, p. 87-97.

Microstructure, hardness, tensile properties and ductility of as-cast alloys containing 9.5-11.5% Al, 3-6% Fe and 3-6% Ni as affected by heat treatment and composition. 5 ref. (Q29, Q27, Q23p, M27, 2-60, 2-64; Cu-s, Al, Ni, Fe, 5)

1433-Q. Aluminum Alloy 356 + Be Permanent Mold Casting. A. J. Iler. Modern Castings, v. 40, Aug. 1961, p. 98-105.

Effect of forces applied by the permanent mold centrifuge on mechanical properties and structure is measured using a specially developed mold which eliminated other solidification factors, radiography, photomicrography and tensile tests. (Q-general, M27, 1-53, 1-54; Al-b, Be, 5-63)

1434-Q. Magnesium Analysis as Reliability Criterion of Ductile Iron Quality. Modern Castings, v. 40, Aug. 1961, p. 106-108.

Comparison of results obtained from various laboratories of analyses of ductile iron for Mg content to determine with what degree of reliability the analysis could be employed in predicting the graphite form and thus the strength, ductility and modulus of elasticity of the Fe. (Q27a, Q23p, 2-60, 3-71; CI, Mg)

1435-Q. High Strength Structural Steel Castings for Aerospace Applications. W. R. Roser. Modern Castings, v. 40, Aug. 1961, p. 109-112.

Yield strength, ultimate strength, reduction of area and ductility of 17-4 PH stainless steel investment castings. Effect of chemical composition and foundry process control on properties, especially ductility. (Q-general, Q23p, 2-60, T24; SS, 5-62, 17-57)

1436-Q. Creep Collapse of Cylindrical Shells. Thein Wah. Franklin Institute, Journal, v. 272, July 1961, p. 45-60.

Analytical derivation of collapse time for cylinders under steady-state creep, external radial pressure and high temperature (300-500° F.) The boundary conditions assumed for the cylinders approximate the "simply supported" and "fixed-end" conditions. Theoretical predictions are compared with experimental results on 6061-T6 Al alloy cylinders. 7 ref. (Q3c, 2-61, 3-74; Al-b)

1437-Q. Studies of the Low-Temperature Tensile Properties of Some Refractory Metals. W. M. Armstrong and John A. H. Lund. Canadian Mining and Metallurgical Bulletin, v. 54, July 1961, p. 504-509.

Tensile properties of single crystal vanadium, polycrystalline vanadium and polycrystalline Ta from 20 to -196° C. Specimen preparation and testing techniques. Temperature dependence of yield stress and ductility. 8 ref. (Q27, Q23p, Q23b, 1-54, 2-63; V, Ta)

1438-Q. High Temperature Deformation of Aluminum Single Crystals. S. Howe, B. Liebmann and K. Lucke. Acta Metallurgica, v. 9, July 1961, p. 625-631.

Temperature and strain rate dependence of workhardening is investigated in Al crystals. Single crystals of high purity Al are grown and extended at various strain rates from -196 to 600° C. 15 ref. (Q23a, 2-62, 2-68; Al, 14-61)

1439-Q. (Italian.) The Diffusion of Fatigue Cracks in Notched Light Alloy Specimens. C. Panseri, L. Mori and D. Morri. Alluminio Nuova Metallurgiya, v. 30, July-Aug. 1961, p. 347-355.

Fatigue crack diffusion characteristics of notched Avional 24 alloy in TN, TA 17/10 and TA 20/48 states and of Peraluman 50 R alloy are determined by a rotary bending fatigue testing machine at 11,500 cycles per min. (Q7, 1-53; Al-b)

1440-Q. (Italian.) Influence of Technological Production on the Properties of Rolled Al-Mn Alloy 1,2 UNI 3568

Products. M. Leoni. Alluminio Nuova Metallurgiya, v. 30, July-Aug. 1961, p. 357-366.

Structural testing of Al-Mn alloy of controlled chemical composition indicates that the optimum composition for obtaining rolled products of good structural, mechanical, deep drawing and anodizing characteristics is about 1-1.2% Mn and 0.5% Fe. Influence of thermal cycling on structural and mechanical characteristics. (Q-general, G4, L19, 17-52, 2-60, 2-64; Al-b, Mn, Fe)

1441-Q. (Pamphlet.) New Concepts in Steel Design and Engineering. 1961. 59 p. U. S. Steel Corp., 525 William Penn Place, Pittsburgh 30, Pa.

Four papers on advancements in constructional steels relative to design practice and economy. Included are physical and mechanical properties, fabricability, corrosion resistance, optimum proportioning and other design factors for various carbon and alloy steel beams, sheets, castings, columns and girders. Papers are abstracted separately. (Q-general, T26, 17-51; CN, AY, SGB-s, 17-57)

1442-Q. The Fourth Dimension in Design. J. A. Gilligan. Paper from "New Concepts in Steel Design and Engineering". U. S. Steel Corp., Pittsburgh 30, 1961, p. 3-18.

Tensile strength, yield point, section thickness, weldability, corrosion resistance and stress strain relationship are given with cost considerations for structural carbon steels, high-strength, low-alloy steels and heat treated constructional alloy steel. Application of design in fabrication of storage tanks, bridges and buildings. (Q-general, T26; ST, SGB-s, 17-51, 17-53, 17-57)

1443-Q. Lighter Weight and Lower Cost Achieved With Stronger Steels. G. Haaijer. Paper from "New Concepts in Steel Design and Engineering". U. S. Steel Corp., Pittsburgh 30, 1961, p. 19-32.

Influence of yield stress and modulus of elasticity and cost considerations on the optimum proportioning of beams, girders and tension members of structural carbon steel, high-strength, low-alloy steel and constructional alloy steel is investigated by structural analysis. (Q23b, Q21; ST, SGB-s, 17-51, 17-53)

1444-Q. Column Strength of Constructional Steels. L. S. Beedle, T. V. Galambos and L. Tall. Paper from "New Concepts in Steel Design and Engineering". U. S. Steel Corp., Pittsburgh 30, 1961, p. 33-50.

Relationship between welding, heat treatment and mechanical stress relieving, and resultant residual stress, strain hardening, mechanical strength, deflection, shear modulus, stress slenderness ratio and stress-strain curve are given for columns of A7 structural carbon steel, A242 low-alloy steel and constructional alloy steel. (Q-general, Q25, G23, J1a; ST, SGB-s, 17-51)

1445-Q. New Steels and Products for Advanced Engineering Design. R. W. Simon. Paper from "New Concepts in Steel Design and Engineering". U. S. Steel Corp., Pittsburgh 30, 1961, p. 51-58.

Yield and tensile strengths as a function of temperature and corrosion resistance, machinability, weldability, impact resistance, brittleness and fabricability are given for beams, sheets and castings of A7, A36 and A440 structural steels; A441 and A242 low-alloy steels; constructional, X-200 and Ni alloy steels; and 304 stainless steels. (Q-general, ST, SGB-s, 4, 17-51)

1446-Q. Radiation Damage of Metals. L. E. Steele and J. R. Hawthorne. Report of NRL (Naval Research Laboratory) Progress, July 1961, p. 22. (Available as PB 171320 from U. S. Office of Technical Services, Washington 25, D. C.)

The effects of elevated irradiation temperatures on the shift in the ductile-to-brittle transition temperature of pressure vessel steels given. (Q23r, 2-61, 2-67, T26q, 10-54; ST)

1447-Q. (Russian.) Stability of Microfissures in Solids. Yu. M. Plishkin. Doklady Akademii Nauk SSSR, v. 137, Mar. 1961, p. 564-567.

Formation of microcracks in an assumed crystal of an ideal lattice when exposed to a load not exceeding its elastic limit. It is assumed that with the load still acting, microcrack propagation in an ideal lattice takes place at

sound velocity and can be stopped only by a lattice defect. Formation energy and stability of microfissures. 7 ref. (Q26q, 3-68; 14-61, 9-72)

1448-Q. (Russian.) Stresses in Cast Iron Box-Like Castings Resulting From Resistance of Cores. O. Yu. Kotsyubinski and A. M. Gerchikov. Liteinoe Proizvodstvo, Jan. 1961, p. 27-30.

Use of thin-wall molds designed for investigating the relationships between different core materials, cooling time and temperature and stresses developed in castings. Effect of 10-12% silvery graphite additions to the core mix. Influence of arbors on collapsibility. 10 ref. (Q25, 2-60, 2-61, W19g; CI)

1449-Q. Stresses in a Ductile Material Subject to Biaxial Plastic Strain. W. L. Bride. Engineer, v. 212, July 28, 1961, p. 141-144.

Application of the orthogonal shear stress theory to develop a graphical method of determining the strain components from known stresses. Development of a semigraphical method of determining the stresses from the measured total strains. (Q25, 3-68, 1-54)

1450-Q. Cold Working Tool Steels--Their Selection and Application. Robert S. Rowe. Australian Machinery and Production Engineering, v. 14, July 1961, p. 21-25.

Evaluation of the metallurgical characteristics (hardening properties, toughness, wear resistance, machinability, etc.) of various toolsteels relative to their applications. Composition and classification of each type of steel. 9 ref. (Q-general, G17k; TS, 17-57)

1451-Q. (French.) Mechanical Characteristics of Unalloyed or Weakly Alloyed Iron at High Temperatures. Fonderie, v. 185, June 1961, p. 229-237.

Mechanical properties of graphite, lamellar, spherical and malleable steels are given as functions of composition and temperature. (Q-general, 2-60, 2-62; CI)

1452-Q. (English) Cleavage Fracture in Single Crystals of Silicon Iron. Ryukichi Honda. Physical Society of Japan, Journal, v. 16, July 1961, p. 1309-1321.

Sheet specimens of 2.9% silicon iron with (110) surfaces are extended in the (100), (110) and (111) directions at -196° C. until fracture. Twins and slip lines are observed during extension and after fracture. 18 ref. (Q26n, Q24, 2-63, 3-72; Fe-b, Si, 4-53)

1453-Q. Low-Cost Honeycomb Materials Offer New Design Freedom. Iron Age, v. 188, Aug. 24, 1961, p. 66-68.

Values are given for strength-to-weight ratios, weight versus cell size and other design parameters for Al, stainless steel, refractory metal, paper and asbestos cores. (Q-general, 17-51; Al, SS, EG-d37, NM, 7-59)

1454-Q. The Flow Stress of Aluminum and Copper at High Temperatures. P. B. Hirsch and D. H. Warrington. Philosophical Magazine, v. 6, June 1961, p. 735-768.

The ratio of the flow stress at 20-600° C. to that at 0° is measured for polycrystalline Al and Cu and for single crystals of Al. The results are interpreted in terms of a model based on sessile vacancy jogs in screw dislocations which, below a certain critical temperature, advance with the aid of stress and above the critical temperature advance with the aid of thermal activation. 47 ref. (Q24, Q3, M26b, N3, 2-61; Al, Cu)

1455-Q. Stored Energy and Electrical Resistivity in Deformed Metals. L. M. Clarebrough, M. E. Hargreaves and M. H. Loretto. Philosophical Magazine, v. 6, June 1961, p. 807-810.

Superpurity Al (99.991%) is deformed in cubic compression and annealed at 400° C. for 1 hr. Stored energy, electrical resistivity and Vickers hardness are measured as functions of deformation and annealing temperature. Recrystallization phenomena is observed with stacking fault energy and dislocation density relations. 16 ref. (Q24, Q29n, M26b, N5, P15g, 2-64, 3-68; Al-a)

1456-Q. Stored Energy and Flow Stress in Deformed Metals. L. M. Clarebrough, M. E. Hargreaves, A. K. Head and M. H. Loretto. Philosophical Magazine, v. 6, June 1961, p. 819-822.

Review of data and theory for stored energy and dislocation pile-up relations to flow stress arising in workhardened

metals. Comparison of experimental data for Al, Cu and Ni deformed in compression and alpha brass and Ag deformed in tension. 11 ref. (Q24, Q23a, M26b, 3-68, Al, Cu-b, Ni, Ag)

1457-Q. (Japanese.) Influence of the Machined Surface Layer on Hardness of the Surface of Hardened Steel. Yutaka Arakida and Tsuruo Shibazaki. Tetsu-to-Hagane (Iron and Steel Institute of Japan, Journal), v. 47, July, 1961, p. 918-924.

Vickers and Shore hardness measurements and X-ray diffraction examination of the surface of alloy steel Sendzimir roll specimens after quenching treatment subsequent to finish machining by turning, grinding or mechanical polishing. Effect of "competition" between thermal and mechanical actions on workhardening and stress mechanisms in the surface layer. 7 ref. (Q29n, Q23a, 2-64, 3-66, 3-68; ST)

1458-Q. (Japanese.) Fire Cracking Characteristics of Chromium-Molybdenum Steel. Juroh Watanabe. Tetsu-to-Hagane (Iron and Steel Institute of Japan, Journal), v. 47, July, 1961, p. 925-929.

Crack depth and initiation and propagation behavior, in cast, normalized, spheroidized, annealed and forged alloy steel specimens (for slabbing and blooming mill rolls) is investigated by cyclic thermal stressing at 450-600° C. with subsequent electron microscopy analysis. Crack susceptibility is influenced by forcing reduction, porosity, carbon and cementite content and heat treatment induced segregation and microstructure data are given for Charpy impact value and Vickers hardness. 6 ref. (Q26q, Q-general, M27, 2-60, 2-64, 3-66, 3-68; AY)

1459-Q. (Russian.) Effect of Alloying Elements on Properties of Steel. M. P. Braun. Izvestiya Akademii Nauk SSSR, Otdelenie Tekhnicheskikh Nauk, Metallurgiya i Toplivo, Jan. 1961, p. 64-73.

Various alloy steels are mechanically tested in the quenched, tempered and normalization annealed states at temperatures from 50 to -60° C. Transition temperatures after various heat treatments. Effect of elements on isothermal austenite transformation. 13 ref. (Q-general, Q23r, N8g, 2-60, 2-61; AY)

1460-Q. (Russian.) Tensile Testing of Metals at Elevated Temperatures and Various Deformation Velocities. M. G. Lozinskii and N. Z. Pertsovskii. Izvestiya Akademii Nauk SSSR, Otdelenie Tekhnicheskikh Nauk, Metallurgiya i Toplivo, Jan. 1961, p. 96-107.

Ni samples are heated in a vacuum by d-c. passage and simultaneously subjected to a uniform tensile deformation of $1\text{-}0.6 \times 10^3$% per hr. Tensile strength, elongation, hardness and microstructure are determined for various temperatures and speeds. 17 ref. (Q27, Q23p, Q29, M27, 2-62, 3-68; Ni)

1461-Q. (Russian.) Local Plastic Deformation in the Brittle Fracture of Technical Iron. B. S. Kasatkin. Izvestiya Akademii Nauk SSSR, Otdelenie Tekhnicheskikh Nauk, Metallurgiya i Toplivo, Jan. 1961, p. 108-116.

Samples, made from hot rolled technical Fe that was hot forged, held at 1100° C. for 2 hr. and furnace cooled, are metallographically polished and etched and impact tested from 20 to -190° C. varying the deformation degree. Impact strength as a function of temperature. Effects of temperature and deformation degree on microstructure, crystal slip and deformation bands and ranges. 19 ref. (Q26s, Q6, Q24, M27, 2-61, M20; Fe)

1462-Q. (Russian.) Embrittlement of Steel in Connection With Secondary Hardness. V. I. Sarrak and R. I. Entin. Izvestiya Akademii Nauk SSSR, Otdelenie Tekhnicheskikh Nauk, Metallurgiya i Toplivo, Jan. 1961, p. 117-118.

Alloy steels 10T, 35T, 20S2G3N2KhF, 30S2G3N2F, 35S2G3N2F and 40S2G3N2F are quenched from 1350-1100° C. and tempered at temperatures to 650° C. Embrittlement, hardness, impact strength, width of X-ray interference lines, coercivity and propagation of microcracks are determined after tempering. 7 ref. (Q26s, Q29, Q6, P16a, 2-64; AY)

1463-Q. (Russian.) Effect of Columbium Oxide Inclusions on the Cracking Resistance of Low-Carbon Steel. L. M. Belova, O. D. Moldavskii and A. P. Pronov. Izvestiya Akademii Nauk SSSR, Otdelenie Tekhnicheskikh Nauk, Metallurgiya i Toplivo, Jan. 1961, p. 119-121.

Armco iron is melted in magnesite crucibles and ferrocolumbium is added in an amount sufficient to obtain a melt with 0.4-4.5% Cb. Samples are cast for structure testing and electrolytic isolation and analysis of nonmetallic inclusions. Resistance to cracking and concentration of CbO in the inclusions as functions of Cb content. (Q26, 2-60; CN, Cb, 9-69)

1464-Q. (Russian.) Plasitc Deformation of Chromium. M. P. Matveeva. Izvestiya Akademii Nauk SSSR, Otdelenie Tekhnicheskikh Nauk, Metallurgiya i Toplivo, Jan. 1961, p. 122-125.

Electrolytic Cr is suspension remelted in a He atmosphere, cast into blanks and electrolytically machined into polished samples. The effect of deformation on the microstructure is investigated by torsional testing at 1200-1400° C. in a vacuum and micrography. 9 ref. (Q24, M21, M27, 2-61; Cr)

1465-Q. Exotic Alloys. Factory, v. 119, Aug. 1961, p. 84-86.

Use of Ni and Co-base alloys for hard facing, in furnace trays, as wear and corrosion resistant strips and in fixtures. Mechanical properties and economic considerations. (Q-general, L24; Ni-b, Co-b, 4-53, 17-57)

1466-Q. Evaluation of Forming Characteristics of Columbium Alloys. R. T. Torgerson. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 31-52.

Forming characteristics of five Cb alloy sheet materials proposed for hypersonic vehicle structures are evaluated by studies of tensile properties, bend and bi-axial ductility, brittle-ductile bend transition temperature and embrittling effects resulting from diffusion of interstitial elements. Results show good room temperature formability with brittle-ductile bend transition at subzero temperatures. (Q23q, Q-general, 2-61; Cb)

1467-Q. Influence of Carbon Additions on the Workability and Mechanical Properties of Columbium. R. T. Begley and A. I. Lewis. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 53-74.

Effect of carbon on the microstructure, hardness, workability and low temperature tensile properties. Metallographic examination indicate that the maximum solubility of C in Cb is between 0.75 and 1.0 wt.% at 2230° C. Carbon additions up to 0.53 wt.% had no effect upon the yield strength of Cb at -196 to 200° C. but significantly reduce low temperature ductility. (Q23q, Q-general, M27, 2-60, 2-63; Cb-b, C)

1468-Q. Effect of Various Gaseous Contaminants on the Strength and Formability of Columbium. H. E. McCoy and D. A. Douglas. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 85-118.

Results show that moderate addition of O, N and H strengthen Cb at room temperature. Oxygen present in solution in concentrations in excess of 3000 ppm. causes serious embrittlement. Nitrogen present in excess of 1000 ppm. reduces the room temperature bend and tensile ductilities of Cb to essentially zero. The strength of this material at 1010° C. is increased by nitrogen and the observed reductions in ductility are not as serious as at room temperature. Hydrogen concentrations in excess of 500 ppm. seriously embrittle Cb at room temperature. (Q26s, Q23q, Q-general, 3-69; Cb-b, O, H, N)

1469-Q. Processing and Properties of F-48 Columbium Alloy Sheet. T. K. Redden. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 279-298.

Processing procedures and mechanical properties of a 15 wt.% W-5 wt.% Mo-1 wt.% Zr-Cb alloy. Sheet of 0.040-0.050 in. thickness is produced and used for determination of mechanical properties. Tensile properties to 1371° C. are given, together with stress rupture tests at 1093, 1204 and 1371° C. Reported mechanical properties show useful engineering strength to at least 1370° C. (Q-general, F-general, 2-60, 2-62; Cb-b, 4-53)

1470-Q. Young's Modulus of Columbium at Elevated Temperatures. David P. Laverty and Edward B. Evans. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 299-307.

Young's modulus of high purity Cb is determined by a static test method at 20-820° C. Annealed sheet is stressed in axial tension under a protective atmosphere of argon and the resulting elastic strain read directly by optical means. The modulus decreases linearly from 16.2 million psi. at room temperatures to 14.1 million psi. at 820° C. (Q21a, 2-60, 2-61; Cb, 4-53)

1471-Q. Mechanisms of Creep in Columbium and Columbium-1% Zirconium Alloy. D. P. Gregory and G. H. Rowe. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 309-341.

Experimental data are interpreted by extension of dislocation theory for b-c-c. metals. A low activation energy recovery process which significantly affects mechanical behavior of b-c-c. metals is described and utilized in the development of the creep theory. The rate controlling process for creep in Cb and Cb-1% Zr alloy changes from a slip controlled mechanism at temperatures of 930 and 1100° C., respectively. (Q3, Q24a, M26b, 2-60, 2-62; Cb-b)

1472-Q. Effect of Grain Size, Strain Rate and Temperature on the Yield Strength of Columbium. E. S. Tankins and R. Maddin. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 343-363.

Cb behaves in a similar manner to other b-c-c. metals in that yield point, strain rate sensitivity and aging phenomenon are exhibited. Workhardening of Cb does not occur at low temperatures and only an upper yield point was observed. Twinning is shown at liquid air temperatures. Cb exhibits ductile properties down to liquid air temperature provided that gaseous impurities are at a minimum. (Q23b, Q-general, 2-59, 2-61, 3-67, 3-68; Cb)

1473-Q. The Flow and Fracture Characteristics of Electron-Beam-Melted Columbium. E. T. Wessel, L. L. France and R. T. Begley. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 459-502.

Characteristics are studied in tension and compression tests from 600 to 269° C. to encompass both the ductile-to-brittle transition and the strain aging temperature regions. Effects of interstitial impurities, strain rate and temperature on the flow and fracture characteristics. 57 ref. (Q24, Q26, 2-61, 3-67, 3-68, 3-69; Cb-a)

1474-Q. Mechanical Behavior of Columbium Containing Oxygen. J. F. Enrietto, G. M. Sinclair and C. A. Wert. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 503-521.

Cb is extremely susceptible to strain aging, both in tension and in fatigue when amounts of oxygen are present in solid solution. The stress magnitude of the strain aging peak for both tension and fatigue is dependent upon the oxygen concentration. Strengthening due to strain aging increases very rapidly with increasing oxygen content up to approximately 0.02 wt.% which corresponds to one oxygen atom per dislocation per atom plane in the severely deformed metal. Oxygen in excess of 0.02 wt.% contributes relatively little additional strengthening at the temperatures of maximum strain aging. (Q-general, N7e, 2-60, 2-61; Cb-b, O)

1475-Q. The Properties of Columbium-Aluminum-Vanadium Alloys. Pt. 2. Mechanical Properties. W. F. Sheely and J. L. Wilson. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 585-594.

The Cb-3% Al-3% V alloy is one of the more oxidation-resistant Cb-base ternary alloys. Techniques for consolidating and fabricating alloys based on this compsoition are given with effects of Ti and Zr on mechanical properties. Zr increases elevated temperature strength, but while Ti improves oxidation resistance it also decreases elevated temperature strength.

(Q-general, G-general, R1h, 2-60, 2-62; Cb-b, Al, V)

1476-Q. (Italian.) Methods of Working and Characteristics of Pearlitic Malleable Cast Irons. Piers Bardusco. Tecnica Italiana, v. 26, Apr.-May 1961, p. 191-198.

Mechanical properties, workability, weldability and castability of whiteheart and blackheart cast iron and methods of producing various types of malleable-pearlitic cast irons. Classification, applications and economic considerations. (Q-general, Q23q, E25p, K9s; CI-s, 17-57)

1477-Q. (Translation.) Long-Time Strength and Steady Creep of Polycrystalline Bodies. A. N. Orlov. Soviet Physics--Solid State, v. 3, Aug. 1961, p. 367-369. (Translation of Fizika Tverdogo Tela, v. 3, Feb. 1961, p. 317-670).

The observed relationship between the steady creep rate and the time to rupture is interpreted on the basis of a model in which diffusionless crack growth governs both phenomena. 24 ref. (Q3, 17-56)

1478-Q. (English.) Deformation Twins by Tensile Impact in White Tin. Tomoo Hirokawa. Hiroshima University, Journal of Science, v. 24A, Dec. 1960, p. 637-646.

Single crystal plates of white Sn are pulled by impact and twin bands are observed with ordinary microscope. Correspondence of behavior of formed twins with crystallographic orientation in the impact direction is discussed in terms of twinning energy. 11 ref. (Q24a, 3-68, 3-72; Sn)

1479-Q. Internal Friction of Cold Worked Copper. P. R. Dhar, K. K. Bhattacharjee and S. S. Ghosh. Journal of Scientific & Industrial Research, v. 20D, June 1961, p. 237-238.

Effect of room temperature annealing (7 days) and removal of adherent oxide coatings from the surface on the internal friction of Cu wire specimens. Annealing causes added dislocation pinning by impurity atoms, lowering internal friction. Removal of the oxide increases the number of free dislocations, increasing the friction. 10 ref. (Q22, M26b, R1h, 2-64; Cu, 4-61)

1480-Q. (German.) Theory of Fracture, Its Problems and Recent Results. Hans Rumpf. Materialprufung, v. 3, July 1961, p. 253-265.

Review of physical mechanisms of energetic reactions for fracture and crack formation; establishment of physical models for interpretation of fracture in crystalline bodies. (Q26, 17-56)

1481-Q. (German.) Current Ideas on Mechanism of Brittle and Ductile Fracture of Metals. Albert Kochendorfer. Materialprufung, v. 3, July 1961, p. 266-274.

Modern theory of metal fracture is discussed in terms of plastic deformation in brittle fracture, theory of yield point mechanisms and brittle fracture and mechanism of ductile fracture. (Q26, Q24c)

1482-Q. On the Mechanism of Yielding and Flow in Iron. Hans Conrad. Iron and Steel Institute, Journal, v. 198, Aug. 1961, p. 364-375.

Review of thoery for plastic deformation mechanisms and activation energy-volume, stress-strain and dislocation relations in the yielding of Fe. Tension, compression, torsion and bending tests on mild steel and ingot, electrolytic, low-carbon and Yorkshire iron to determine yielding delay time, upper yield stress, lower yield stress, Luders band propagation, friction stress, flow stress and dislocation mobility. 62 ref. (Q24c, Q-general, M26b, 3-66, 3-68; Fe-b)

1483-Q. The Effects of Temper Rolling and Strain Ageing on the Formability of Low-Carbon Steel. D. V. Wilson, R. D. Butler and B. B. Moreton. Iron and Steel Institute, Journal, v. 198, Aug. 1961, p. 376-386.

Changes in the workhardening behavior of deep drawing sheet steel are observed by tensile, deep drawing and stretch forming tests after annealing, temper rolling in various directions and strain aging at 17° C. for up to 4 months. Data are given for additional mechanical properties including stress-strain relations, yield stress and crack initiation. 18 ref. (Q23q, Q-general, N7e, 2-64, 3-68; CN-g)

1484-Q. Friction of Metals in Reciprocating Sliding. Yasukatsu Tamai. Journal of Applied Physics, v. 32, Aug. 1961, p. 1437-1440.

Experiments conducted on metallic friction in reciprocating sliding with pendulum. Reciprocating sliding gives quite different results from those of single-traverse of unidirectional repeated sliding, a fact emphasized in the coefficient of friction and the electric contact resistance, surface damage due to sliding and the low friction phenomenon. 5 ref. (Q9p, 1-53)

1485-Q. Shock Wave Compression of Hardened and Annealed 2024 Aluminum. G. R. Fowles. Journal of Applied Physics, v. 32, Aug. 1961, p. 1475-1487.

Measurements of Hugoniot equations of state below 50 kbar. Using oblique shock geometry, shock and free-surface velocities are recorded by light-reflection technique. Observed elastic wave amplitudes for hardened and annealed material show agreement with predicted values. Shock wave data in the range of 25-50 kbar yield one-dimensional strain isotherms show agreement with semitheoretical curves. No significant strain effects are evident indicating that elastic-plastic theory is valid for this material. 26 ref. (Q24j; Al)

1486-Q. Nonlinear Damping Losses in YIG. Robert L. Conger. Journal of Applied Physics, v. 32, Aug. 1961, p. 1525-1527.

High-power ferromagnetic resonance in a flat plate has a small component of the precession parallel to the applied d-c. field. This component causes frequency doubling and also coherent amplification of some scattered spin waves, which then cause a linear damping of the parallel component of precession. The nonlinear damping causes the microwave susceptibility to decrease with increasing power and to become approximately inversely proportional to the rf. field at high power levels. 4 ref. (Q22j, P16)

1487-Q. Compression Testing at Elevated Temperatures. Julian P. King. Metals Engineering Quarterly, v. 1, Aug. 1961, p. 30-38.

Facilities and methods for obtaining compression strength data at temperatures from -100 to 1800° F. are presented with emphasis on means of controlling variables which produce discrepancies in experimental values. Effects of testing conditions on properties of Rene 41 and Inconel X sheet specimens. (Q28, 2-62; SGA-h, Ni-b)

1488-Q. Influence of Atmospheric Moisture on Fatigue of Hardened Steel. E. R. Mantel, G. H. Robinson and R. F. Thomson. Metals Engineering Quarterly, v. 1, Aug. 1961, p. 57-61.

Test data are presented to show that the fatigue durability of hardened 52100 steel, in both reversed and unidirectional bending, is extremely sensitive to moisture in the ambient atmosphere (decreasing as humidity increases), indicating that the humidity of the test environment should be closely controlled in laboratory fatigue testing of high-hardness steels. (Q7, S18p, 1-54; ST)

1489-Q. (French.) Monographs on Fatigue Failures. Soudage et Techniques Connexes, v. 15, May-June 1961, p. 185-194.

Analyses of the causes of the fatigue failure of various welded constructions, including water tanks of locomotive tenders, the shaft of a self-propelled hoist, longituderal members of lorry underframes and bottom plating of motor vessels. (Q7, 10-54, T-general; 7-51)

1490-Q. Missiles, Material Selection and Metallurgical Research. W. S. Lyman. Chemical Engineering Progress Symposium Series, v. 57, no. 33, 1961, p. 64-71.

Al, Mg, Ni, Ti and steel alloys for operational environments above 1500° F. are surveyed in regard to load-carrying functions, oxidation and erosion problems, propellant compatibility, tensile loading, service life, brittle failure, temperature resistance and strength properties. (Q-general, T24e, 10-54, 17-57; SS, Al, Mg, Ni, Ti, SGA-g, SGA-h, SGB-r)

1491-Q. High-Temperature Mechanical Properties of Steels Used in Gas-Cooled Reactor Pressure Vessels. J. M. Robertson and R. W. Nichols. Paper from "Steels for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 14-39.

Creep and stress rupture tests have been made on specimens of low-carbon high-maganese steels. For Al grain-refined steel the results indicate that 0.2% creep strain will occur in 200,000 hr. at 400° C. at a stress of 3 1/2 tons

per sq. in. hearth Si killed steel show a higher creep strength under similar conditions, but accurate extrapolation is not possible because of inflections in the experimental creep strain/time curves. (Q3, 2-60, 2-61, 3-66, T26q; ST, 17-57)

1492-Q. Metallurgical Aspects of Creep in Carbon and Low-Alloy Steels. J. Glen. Paper from "Steels for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 40-53.

Precipitation processes that occur in steel are the prime factor controlling creep strength. Special consideration is given to carbon steels and in particular to the scatter in creep properties. that exist in them. Creep strength and variations of same are related to the "active" nitrogen content. This applies to both Al and Si-killed steels. Thermal treatments that bring about the precipitation of noncoherent nitrides from such steels also cause a lowering of the creep strength. (Q3, N7, 2-60, 2-64; ST)

1493-Q. Stress Relaxation Tests on Pressure-Vessel and Low-Alloy Steels. D. S. Wood. Paper from "Steels for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 101-110.

Results are considered in three groups, Si-killed steels, Al grain-refined steels and low-alloy steels. Stress relieving below 600° C. is less effective in reducing the residual stress level than above 600° C. Wide variations in relaxation behavior can occur between different steels within the same group and for low-alloy steels significant variations can occur from cast to cast and even within the same cast. (Q3a, T26q, 2-64, 3-66; ST, 17-57)

1494-Q. The Creep Properties of a Silacon-Killed Carbon-Manganese Pressure Vessel Steel. D. S. Wood and P. B. Swift. Paper from "Steels for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 111-126.

Low deformation creep and stress rupture tests carried out on a number of casts of 0.16% C, 1.0-1.4% Mn steel at 350-500° C. In general this steel exhibits a good level of creep resistance but may occasionally show a low level, particularly if a high soluble-aluminum content occurs in conjunction with a low free-nitrogen content. (Q3, 2-60, 2-61, T26q; ST-c, 17-57)

1495-Q. Theoretical Aspects of Radiation Damage and Brittle Fracture in Steel Pressure Vessels. A. H. Cottrell. Paper from "Steel for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 281-296.

Radiation embrittlement of structural steel. Clustered lattice defects produced by knock-on collisions from fast neutrons harden steel by a process analogous to precipitation hardening and it is shown that, for the amount of hardening produced, the increase of the ductile-brittle transition temperature by irradiation is quite normal. (Q26s, Q23n, M26s, N7, T26q, 2-67; ST, 17-57)

1496-Q. The Effect of Neutron Irradiation on the Ductile-Brittle Transition Temperature of Steels and Its Relevance to Reactor Pressure Vessels. D. R. Harries, R. W. Nichols and C. Judge. Paper from "Steel for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 297-327.

Effects of irradiation as a function of temperature of irradiation, integrated neutron dose, strain rate in post-irradiation tests and specimen dimensions assessment of the brittle fracture characteristics of steel plates employed in the construction of a reactor pressure vessel. (Q23r, Q26s, T26q, 2-61, 2-67, 3-68; ST, 17-57)

1497-Q. Practical Neutron Dosimetry for Steel Irradiation Studies. L. E. Steele. Paper from "Steel for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 328-342.

Value of preliminary neutron flux surveys and the problems of measurement and interpretation of flux values. Correlation of neutron flux data with shifts in the ductile-brittle transition temperature for various pressure vessel steels demonstrates how property changes may be useful in assessing the validity of neutron dosage values. (Q23r, 2-67, T26q; ST, 17-57)

1498-Q. Studies of Radiation Effects and Recovery of Notch Ductility of Pressure-Vessel Steels. J. R. Hawthorne. Paper from "Steel for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 343-369.

Charpy V-notch and drop-weight test specimens of various pressure vessel steels and weld metals irradiated in several different nuclear and thermal environments to determine the individual effects of these irradiations on notch ductility and to investigate the effectiveness of post irradiation heat treatment for recovery of material properties. (Q23s, Q22n, 2-64, 2-67, T26q; ST, 17-57)

1499-Q. Neutron Irradiation Effects in Steels. R. G. Berggren. Paper from "Steel for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 370-381.

Changes of notch-impact transition temperature as a function of irradiation at less than 100° C. Varied effects of elevated irradiation temperature and post-irradiation annealing on the mechanical properties of steels are shown to be dependent upon steel composition and heat treatment, neutron flux, dose and spectrum and irradiation temperature. (Q6, Q23r, 2-60, 2-61, 2-64, 2-67; ST)

1500-Q. Influence of Some Metallurgical Variables on Irradiation Embrittlement of Ferritic Steel. L. P. Trudeau. Paper from "Steel for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, 1961, p. 382-392.

Effect of steel purity, carbide phase and grain size on irradiation embrittlement at irradiation temperatures below 100° C. Irradiation near 200° C. (or heating into this temperature region after irradiation at a temperature below 100° C.) accentuates embrittlement. (Q26s, 2-59, 2-60, 2-61, 2-67; ST)

1501-Q. The Effect of High-Temperature Irradiation on the Tensile Properties of a Low-Alloy Steel. A. L. Lowe, Jr., and L. R. Weissert. Paper from "Steel for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, 1961, p. 410-415.

Effects of irradiation temperatures on the mechanical properties of a low-alloy steel were studied. Tensile specimens of 1 1/4% Cr-1/2% Mo steel irradiated to about 2.5×10^{19}; nvt. (to 1 MeV.) from 725-1700° F. Preliminary results from post-irradiation tests conducted at room temperature indicate that above 800° F. the effect of radiation damage is reduced but full recovery of unirradiated properties does not occur until the irradiation temperature equals the annealing temperature. (Q27, 2-62, 2-67; AY)

1502-Q. Progress in Development of Some Improved Steels for Gas-Cooled Reactor Pressure Vessels. I. M. MacKenzie. Paper from "Steel Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 437-462.

Three improved steels, a 28-32 tons per sq. in. tensile low-carbon high-manganese steel treated with Al and Mo to combine good notch ductility and high temperature strength; a multiple-alloy high-tensile steel based on a proprietary boiler steel extensively used for pressure vessel construction; a quenched and tempered low-carbon multiple- alloy steel providing high strength and toughness combined with good weldability. (Q-general, T11, T26q, 2-60, 2-62; ST, SGB-a, 17-57)

1503-Q. The Development of a High-Tensile Plate Steel for Use at Elevated Temperatures and Pressures. T. F. Pearson and M. Z. de Lippa. Paper from "Steel for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 463-516.

Two types of steel have been developed from an original Ni-Mo-V steel by an increase of the Ni content to 1.5% reduction of V to 0.1% and additions of either 0.3 or 0.5% Cr. These steels have given encouraging results with respect to combined tensile and impact properties. (Q6, Q27, 2-60, 2-62, 3-74; AY)

1504-Q. Steels for Nuclear Power Plant. K. J. Irvine and J. D. Murray. Paper from "Steel for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 517-533.

From the starting point of an Al-killed fine grain steel which has good impact resistance but poor creep strength both by a Mo-V addition and also by using an increased nitrogen content. The creep strength is increased by both methods but the Mo-V steel is preferred because of greater stability during extended tempering treatments. Creep properties are given for Affreeze III (0.12% C, 1.3% Mn, 0.22% Mo, 0.07% Mo, 0.07% V). (Q3, 2-60, 2-64, T26q; AY, 17-57)

1505-Q. Niobium in Carbon and Low-Alloy Weldable Steels. J. E. Russell. Paper from "Steel for Reactor Pressure

Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 534-548.

Impact properties of carbon manganese steels manufactured to a specification similar to JTA 101 are very considerably improved and results on alloy steels with Mn-Ni-Cr-Mo-V and added Cb suggest that a tensile strength exceeding 40 tons per sq. in. with impact better than 20 ft. lb. at -10° C. are available on plates up to 5 in. thick in the normalized and tempered condition. (Q6, Q27a, 2-60, 2-64; AY, Cb)

1506-Q. How Should You Evaluate High-Strength Materials. G. K. Manning. Metal Progress, v. 80, Sept. 1961, p. 65-66.

Evaluation of high-strength materials based on the measurement of their load carrying abilities in the presence of the maximum stress concentration likely to exist on the finished part. Changing concepts of "adequate ductility"; odd effects at high strengths. (Q-general, Q23p, Q27, 3-66; SGB-a)

1507-Q. Testing Protective Coating on Metals. Paul Smits. Metal Progress, v. 80, Sept. 1961, p. 75-79.

Designed to evaluate anodic coatings on Al, a scrape-abrasion apparatus can also be used to test lacquer, porcelain enamel and other nonconductive coatings. (Q9n; Al, 8-70, 8-71, 8-73)

1508-Q. The Effect of Specimen Geometry on Determination of Elongation in Sheet Tension. E. B. Kula and N. H. Fahey. Materials Research & Standards, v. 1, Aug. 1961, p. 631-636.

Studies of influence of thickness and width on elongation in Cu, AISI 1020 steel and heat treated H-11 steel generate a prediction formula and indicate that area is of greater importance than absolute values of width or thickness. (Q23p, 1-53, 3-73; ST, Cu)

1509-Q. Temperature Effects on Material Characteristics. A. L. Jaumotte, A. H. Lefebvre and A. M. Rothrock. Paper from "Combustion and Propulsion Fourth AGARD Colloquium". Pergamon Press, Inc., New York 22, 1961, p. 362-394.

Temperature and stress resistance of Mo, Cb, cermets, Ni, Co, Cr and graphite are tested and mechanical properties are tabulated for applications in aeronautics and space technology. (Q-general, 2-61, 3-66; Mo, Cb, Ni, Co, Cr)

1510-Q. (Russian.) Influence of Deformation and Heat Treatment on Properties of EI437B Alloy. M. Ya. Dzuhutov and B. F. Vakhtanov. Kuznechno-Shtampovochnoe Proizvodstvo, Mar. 1961, p. 3-7.

Effect of the relative duration and temperature of deformation and heat treatment on the mechanical properties of Ni-base alloy. Testing of impact resistance, yield strength and heat resistance. (Q6, Q23b, P11, 2-61, 2-64, 3-67, 3-68; Ni-b)

1511-Q. Testing of Brazed Joints on Steel Tubes and Sheets. H. Koch and K. F. Zimmerman. Schweissen und Schneiden, v. 13, July 1961, p. 263-270.

Tensile, fatigue, notch-impact, impact-bending and bending tests on cold drawn, brazed (using solder containing 40% Ag and equal amounts of Cu, Zn and Cd) St 35.29 steel tubes and sheets. Comparison of brazed with welded joints. Microscopic and electron microscopic investigation of joint structure. (Q-general, K9n, M21; AY, 7-52)

1512-Q. (German.) New Foreign Developments in the Field of Brittle Fracture. K. Ruhl. Schweissen und Schneiden, v. 13, July 1961, p. 271-278.

Review of American, British and Japanese investigations of brittle fracture of various steels with emphasis on influence of three-dimensional stress state, stress rate and temperature; use of specified temperature ranges in acceptance specifications for steel; difference in behavior of steel in specimen and structural parts; and relations between damage temperature and specimen temperature. (Q26s, 2-61, 3-60; ST, 10-54)

1513-Q. (German.) Influence of Residual Elements on Semi-Killed Steel. Percival Greenway. Stahl und Eisen, v. 81, Aug. 3, 1961, p. 1047-1056.

Review of openhearth refining of semikilled steel for sheets and plates. Investigation of segregation of C, Si and Mn in a 13.5 ton ingot and influence of residual elements on mechanical properties. (Q-general, D2, 2-60, 9-69; ST-k)

1514-Q. Mechanical Properties of an Iron-Carbon Alloy During Allotropic Transformation. M. De Jong and G. W. Rathenau. Acta Metallurgica, v. 9, Aug. 1961, p. 714-720.

Mechanical weakness during allotropic transformation of polycrystalline Fe-0.2% C alloy is investigated by torsional deformation and tensile testing at 600-900° C. The weakness is correlated with the difference in specific volume of parent and product phase resulting in developed internal stress and the average hardness or yield stress of the two phases near the transformation temperature. 19 ref. (Q1, Q24c, Q27, N6p, 2-61, 2-64, 3-66, 3-73; Fe-b, C)

1515-Q. Non-Basal Slip and Twin Accommodations in Zinc Crystals. H. S. Rosenbaum. Acta Metallurgica, v. 9, Aug. 1961, p. 742-748.

An etch pit technique using HBr in ethanol is used to observe dislocation patterns on the basal plane of cleaved specimens after annealing and after deformation by compression at 77-300° K. Deformation modes are analyzed in terms of annealing and mechanical twinning and the accommodation of the resultant stresses by dislocations and the relation of slip band formation to orientation. 13 ref. (Q24a, Q24c, M26b, M-general, 2-61, 3-66, 3-68; Zn, 14-61)

1516-Q. (Italian.) Department of Material Testing. Istituto Sperimentale dei Metalli Leggeri--Rapporto Annuale 1960, 1961, p. 81-89.

Methods for determining corrosion, creep, fatigue, wear and friction resistance, yield strength and hardness of light alloys. (Q-general, R11; EG-a39)

1517-Q. (Italian.) Department of Technology. Istituto Sperimentale dei Metalli Leggeri--Rapporto Annuale 1960, 1961, p. 100-107.

Effect of forming and annealing conditions on mechanic characteristics of Al alloys. Centrifugal casting of Lubral antifriction alloy and results of plastic working (forging) on Ti and its alloys. Microstructure and comparison of tensile characteristics of various light alloys. (Q-general, Q27, 2-64, 3-68, E14, F22, M27; Al-b, Ti, EG-a39)

1518-Q. (Italian.) Improvement of the Workability of Cast Irons. Fonderia, v. 10, July 1961, p. 304.

Influence of nitrogen and ferrosilicon additions on the workability of cast iron. Experiments indicate that nitriding improves cast iron workability but that ferrosilicon has no significant effect. (Q23q, 2-60; CI)

1519-Q. (English.) X-Ray Investigation on the Fatigue Damage of Metals. Shuji Taira and Kazuo Honda. Bulletin of JSME (Japan Society of Mechanical Engineers), v. 4, no. 14, 1961, p. 230-237.

Specimens of carbon steel wire, cast iron and cast steel are stressed alternately in rotary bending and the fatigue process studied by observing the half-value width of X-ray diffraction lines taken from the (310) atomic plane. Changes in half-value breadth are indicated to be functions of microstresses. Nondestructive prediction of fatigue life is considered. 19 ref. (Q5, Q7; ST, CI)

1520-Q. (English.) Investigation on Dynamic Creep and Rupture of a Low Carbon Steel. Shuji Taira and Ryoichi Katerazawa. Bulletin of JSME (Japan Society of Mechanical Engineers), v. 4, no. 14, 1961, p. 238-246.

Dynamic creep and rupture tests are carried out at 450° C. on annealed specimens of 0.15% carbon steel under combined static and alternating stress in order to relate strength under dynamic stress to static creep strength. Dynamic creep rupture strength is predicted from static creep rupture data together with fatigue data. Dislocation oscillation is discussed as influenceing dynamic creep. 26 ref. (Q3m, 1-54; CN)

1521-Q. Some Special Cast Copper-Base Alloys. A. W. O. Webb and A. R. French. British Foundryman, v. 54, Aug. 1961, p. 355-364.

Tensile strength, pressure tightness, electrical conductivity and corrosion resistance are evaluated for selected Cu alloys. (Q-general, P-general; Cu-b, 5, 17-57)

1522-Q. Procedures for the Evaluation of Fracture Toughness of Pressure Vessel Materials. W. S. Pellini and J. E. Srawley. U. S. Naval Research Laboratory, NRL Report 5689, June 8, 1961, 26 p.

Fracture toughness requirements of materials for submarine hull structure, thin-walled aerospace and space

vehicles and thick-walled pressure vessels are evaluated in terms of in-service conditions. Survey of explosion crack starter, hydrostatic, explosive bulge, NDT (Navy drop test) and other test methods applied to low-alloy and structural steels and Al alloys. Data are given for low temperature mechanical properties. 24 ref. (Q23r, Q26s, T26q, T24, 2-63; ST, Al-b, 17-57)

1523-Q. (German.) Fatigue Strength of Low-Carbon Steels for Welding Constructions. C. Schaub. Radex Rundschau, Mar. 1961, p. 569-578.

Fatigue testing of welded steel sheet specimens of various compositions and heat treatment to investigate relations between yield point and fatigue strength as influenced by heat treatment and mechanical working. (Q7, 2-60, 2-64, 3-68; CN-g, 7-51)

1524-Q. Strengthening of Iron-Base Alloys Containing Columbium. E. E. Underwood, E. M. Stein and G. K. Manning. Metallurgical Society of AIME, Transactions, v. 221, Aug. 1961, p. 676-682.

The effect of Cb, C and Ni additions to ferritic and austenitic Fe alloys containing 20% Cr on microstructure, precipitation-hardening characteristics and high-temperature properties are investigated by metallographic, hot hardness and magnetic measurement at 68-2300° F. Strengthening is attributed to an enhanced interaction of Cb and Cr_4C particles dispersed within a stable austenitic matrix. 19 ref. (Q-general, Q29p, M27, N7, N8, P16, 2-60, 2-62; SS, Cb, Ni, C)

1525-Q. Dynamic Effects During Twinning in Alpha Iron. Erhard Hornbogen. Metallurgical Society of AIME, Transactions, v. 221, Aug. 1961, p. 711-715.

Twins are propagated into large annealed crystals of alpha iron-phosphorous and alpha iron-molybdenum solid solutions. Strain fields caused by interaction of the twins are explained by assuming that transmitted and reflected plastic waves are created when a twin strikes an obstacle with high velocity. The twin front itself is regarded as a shear wave that may be able to develop a one-dimensional shock front. The phenomena are related to brittle fracture criteria. 18 ref. (Q24b, Q24j, Q26s, 3-68; Fe-b, Mo, P, 14-67)

1526-Q. The Effect of Striation Substructure on the Critical Resolved Shear Stress of Zinc Single Crystals. J. Rezek and G. B. Craig. Metallurgical Society of AIME, Transactions, v. 221, Aug. 1961, p. 715-720.

The critical resolved shear stress of zone-refined Zn single crystals deformed in tension increases with increasing amount of striation substructure. The increase in strength with numbers of striations is accounted for by a dislocation pileup mechanism. A somewhat different means of plotting stress-strain data is introduced which allows a more unambiguous choice of yield stress to be made. 16 ref. (Q23b, Q24c, M26b, 3-68; Zn, 14-61)

1527-Q. The Strain Rate and Temperature Dependence of the Yield Point in Mo in Torsion. D. Weinstein, G. Sinclair and C. Wert. Metallurgical Society of AIME, Transactions, v. 221, Aug. 1961, p. 732-737.

Yielding and brittle-ductile fracture mechanisms in annealed arc-cast Mo during torsion loading are studied as a function of temperature (-200 to 500° C.) and strain rate (0.25-12.5 per sec.) with determination of the heat of activation of the embrittelment phenomenon as a function of stress. The rate effect in yielding is attributed in part to a site place change of carbon (or other interstitial atom) in the metal. 25 ref. (Q24c, Q26s, 2-61, 3-66, 3-68, 3-69; Mo-a)

1528-Q. Observations on Twinning in Zone-Refined Tungsten. H. B. Probst. Metallurgical Society of AIME, Transactions, v. 221, Aug. 1961, p. 741-743.

Mechanical twins are produced in zone-refined tungsten single crystals by explosive working at room temperature. The twins are parallel to (112) planes and have irregular boundaries rather than the classical plane twin boundaries. These boundaries are grooved surfaced in which the grooves themselves are parallel to a (111) direction and the sides of the grooves appear to be parallel to (110) planes. 5 ref. (Q24b, 3-67, 3-68, 3-72; W, 14-61)

1529-Q. Annealing Twins and Coincidence Site Boundaries in Zone-Refined Aluminum. K. T. Aust. Metallurgical Society of AIME, Transactions, v. 221, Aug. 1961, p. 758-761.

The occurrence of annealing twins in high-purity Al single crystals results in the formation of grain boundaries having orientation relationships which correspond to a high density of coincidence sites indicating that large-angle coincidence broundaries have lower free energies than large-angle noncoincidence boundaries. Observations are presented for the coherent structure of twin interfaces and the importance of interfacial energy in preferred orientation. 15 ref. (M27e, M26c, 2-64; Al-a, 14-61)

1530-Q. Embrittlement of NaCl by Surface Compound Formation. W. H. Class, E. S. Machlin and G. T. Murray. Metallurgical Society of AIME, Transactions, v. 221, Aug. 1961, p. 769-775.

The embrittling effects of oxygen, ozone, nitrogen, air and surface residues on NaCl is studied by microscopy, mechanical testing and X-ray diffraction. The embrittlement by oxygen and ozone exposures is associated with the formation of a $NaClO_3$ surface film. It is suggested that certain atmospheres which inhibit the formation or favor the decomposition of this compound can promote ductility. 8 ref. (Q26s, M-general, 2-66; NM-a33)

1531-Q. The Effect of Surface Removal on the Plastic Behavior of Aluminum Single Crystals. I. R. Kramer and L. V. Demer. Metallurgical Society of AIME, Transactions, v. 221, Aug. 1961, p. 780-786.

Al single crystals are pulled in an electrolytic cell allowing surface removal during the deformation. The extent of Stages I and II of the stress-strain curve is increased and the slope decreased as the rate of metal removed from the surface is increased. An increase of the strain rate causes a decrease in the effectiveness of the metal removal indicating that the workhardening coefficient in Stage I is determined primarily by the conditions which exist on the surface of the crystal. 32 ref. (Q24, Q23a, G23, 3-66, 3-68; Al, 14-61)

1532-Q. The Fracture Behavior of Silver Chloride-Alumina Composites. T. L. Johnston, R. J. Stokes, C. H. Li and K. H. Olsen (Appendix). Metallurgical Society of AIME, Transactions, v. 221, Aug. 1961, p. 792-802.

Investigation of the effect of Al_2O_3 particles on the nucleation and growth of cracks through a AgCl matrix. Fibrous cracking is promoted in dispersion-strengthened AgCl under notch-impact conditions at temperatures at which AgCl alone cleaves brittlely. The modification of fracture behavior is attributed to the relaxation of hydrostatic stress beneath a notch by the nucleation of cavities near Al_2O_3 particles. 14 ref. (Q26q, 2-60; Ag-b, 6-70, Al, 14-68)

1533-Q. Accleration of Deformation by Concurrent Phase Change. A. G. Guy and J. E. Pavlick. Metallurgical Society of AIME, Transactions, v. 221, Aug. 1961, p. 802-807.

The total creep of binary Sn alloys containing 0-8.46% Sb in solid solution at 210-220° C. is observed to decrease with increase in Sb content. However, near the solubility limit an anomalous maximum in deformation is found, in agreement with similar observations by Bochvar. 40 ref. (Q3, Q24, N-general, 2-60; Sn-b, Sb, 14-67)

1534-Q. Some Recovery Characteristics of Zone Melted Iron. J. T. Michalak and H. W. Paxton. Metallurgical Society of AIME, Transactions, v. 221, Aug. 1961, p. 850-857.

The recovery of flow stress following strain hardening of polycrystalline and monocrystalline, zone-melted Fe specimens as a function of the amount and temperature of deformation and the time and temperture of the recovery anneal is studied by stress-strain measurements and X-ray back reflection and transmission metallography. The recovery is characterized by time dependence, increase of activation energy with increase of recovery and increased rates with increased deformation and increased temperature. 34 ref. (Q22r, Q24, M-general, N-general, 2-64, 3-67, 3-68; Fe-a)

1535-Q. Effect of Temperature on Yielding in Single Crystals of the Hexagonal Ag-Al Intermetallic Phase. J. D. Mote, K. Tanaka and J. E. Dorn. Metallurgical Society of AIME, Transactions, v. 221, Aug. 1961, p. 858-866.

Specially oriented specimens of the intermediate phase containing Ag plus 33% Al are tested in tension at 77-800° K. to determine the operative strain-rate-controlling dislocation mechanisms.

Slip, twinning and fracture relations to orientation are observed with yield point phenomena. Critical resolved shear stress is shown to be due to combined Suzuki locking and short-range-order hardening. 18 ref. (Q23b, Q24, M26q, M26b, 2-61, 3-68; Ag-b, Al)

1536-Q. Temperature Dependence of the Yielding Behavior of SAP-Type Dispersion Strengthened Alloys. F. V. Lenel, G. S. Ansell and R. A. Bosch. Metallurgical Society of AIME, Transactions, v. 221, Aug. 1961, p. 892-893.

The 0.2% offset yield stress and the proportional limit for MD 2100 and MD 5100 alloys containing flake shaped Al_2O_3 particles dispersed in a matrix of commercial purity Al are determined as a function of the homologous temperature by tensile testing at -190 to 500° C. Of the terms which determine the theoretically predicted yield stress, only the shear moduli have an appreciable temperature dependence. 4 ref. (Q23b, Q21b, 2-61; Al-b, 6-70)

1537-Q. A Better Acoustical Barrier--Lead Sheet. Product Engineering (Design Digest Issue), v. 32, Sept. 4, 1961, p. 61.

High weight and low rigidity put Pt ahead of other common materials on the decible-loss chart. Comparison of sound transmission loss for various materials. (Q21f; Pb, 4-53)

1538-Q. Selecting and Using Hardness Testing Equipment. L. A. Welt. Metalworking, v. 17, Aug. 1961, p. 14-16.

Brinell, Rockwell and Diamond Pyramid hardness tests are compared in terms of principles and application of the indentation equipment and the relation between hardness values as determined by the methods. Hardness of metals is related to other mechanical properties and machinability. (Q29, 1-52)

1539-Q. Sintered Steel. Metalworking Production, v. 105, Aug. 9, 1961, p. 46-47.

Nickel steel sintered at 1300-1400° C. replaces mild steel forgings, reducing costs in many applications. Properties noted include high ductility, tensile strength, composition, hardness and density. (Q-general, 17-57; ST, Ni, 6-71)

1540-Q. (Spanish.) Impurities in Steel. Jose Maria Palacios Reparaz. Instituto del Hierro y del Acero, v. 14, Apr. 1961, p. 397-419.

Sources and effect of impurities including Ni, Cr, Mo, V, B, Sn, Cu, W, Zn, As, Sb, Al, S, P and N on inclusions, surface quality, impact strength, heat resistance, hot deformability, ductility and hardness depth of carbon steel, manganese-silicon steel and toolsteel. 21 ref. (Q-general, P11, 3-69; ST, CN, TS)

1541-Q. Experimentation, Analysis and Prediction for Environmental Creep. C. J. Giemza. Martin Co. Wright Air Development Div. U. S. Office of Technical Services, Jan. 1961, p. 106. $2.50.

A reliable index for creep behavior characterization cannot be provided by static properties as they are determined for the initial condition of the material or subsequent to some metallurgical change. Within practical design limits, the degradation of a material is a reasonable gradual process and the perception of degradation appears to lend itself to analytical representation. An appreciable increase of the secondary modulus of elasticity can result as the consequence of overaging for 7075-T6 Al alloy. (Q3, Q21; Al-b)

1542-Q. Hot Workability of Stainless Steel Ingots. Takeshi Kato, Toshimutsu Kanai and Haruo Abe. Yawata Technical Report, no. 231, June 1960, p. 101-103.

Hot twist tests on 304 and 430 steel ingots to measure formability as affected by addition of rare earth metals or Ca-Si deoxidizers and by heating before working. (Q23q, 1-66, 2-60, E25; SS)

1543-Q. (German.) Effect of Vibrations on Cutting Tool Wear. P. B. Patarinski and R. Chr. Nikolov. Comples Rendus de l'Academie Bulgare des Sciences, v. 14, Jan. 1961, p. 71-74.

Experimental machining of St. 45 steel using an R9 high-speed steel tool. Wear increases when vibrations of the frequency 5500-6500 cycles per min. are transmitted to the tool. 6 ref. (Q9, G17, T6n; ST, TS)

1544-Q. Relaxation Testing of Steam Turbine Bolt Materials With Simulated Re-tightening. J. H. M. Draper. Metallurgia, v. 64, July 1961, p. 3-6.

Turbine cylinder bolts of 1% and 12% Cr-Mo-V bolt steel are tested by tightening, loading, relaxing, retightening

and reloading. Stress time relationships for creep relaxation tests with reloading and effect of reloading on residual stresses at 625 and 650° C. 5 ref. (Q1c, Q3, Q25h, 3-67, 3-68, T7f; AY)

1545-Q. A New High Temperature Steel. Metallurgia, v. 64, July 1961, p. 14.

Development of a 15% Cr, 10% Ni, 6% Mn austenitic, creep resisting steel known as Esshete 1250. Steel requires resolution treatment for either hot or cold forming. Tensile strength, elongation, proof stress, proportionality limit, reduction of area, modulus of elasticity, stress to rupture and creep properties from 20-700° C. (Q-general, 2-61; SS-e, SGA-h)

1546-Q. Ductility in Internally Oxidized Silver Alloys. J. A. Slade and J. W. Martin. Metallurgia, v. 64, July 1961, p. 23-25.

Effect of small quantities of Ni or Co on intergranular brittleness of internally oxidized binary alloys of Ag with Al. Tensile stress, elongation and hardness. Effect of third element on grain boundary precipitation on internal oxidation. 9 ref. (Q23p, Q-general, N7b, 2-60; Ag-b, Al, Ni, Co)

1547-Q. (Slovak.) Fatigue Strength of Automobile Wheels. Oskar Izdinsky. Zvaranie, v. 10, Jan. 1961, p. 3-5.

Equipment and techniques for testing fatigue strength of riveted and welded wheels. Effect of design on fatigue strength of weldments. (Q7, 1-53, 3-73, T21c; 7-51)

1548-Q. Brittle Failure of Steel Stack. M. Zar and M. H. Goedjen. Welding Journal, v. 40, Aug. 1961, p. 371s-376s.

Investigation of probable stress levels of a 21-yr. old all welded mild steel stack indicates that failure was due to brittle fracture caused by temperature stresses in the plate and the fact that the steel temperature was far below the transition temperature. 10 ref. (Q26s, Q23r, 3-66; ST, 4-53, 7-51)

1549-Q. Dilatometric Characteristics of Welded Steels. L. F. Bubba, H. H. Johnson and R. D. Stout. Welding Journal, v. 40, Aug. 1961, p. 364s-370s.

Specimens of A212, A302, T-1, HY-80 and AISI 4140 steels and E11018 steel weld metal are subjected to a simulated welding thermal cycle. Quantitative measurements for strain accompanying transformation and for net strain imposed by the thermal cycle. Microstructure. 4 ref. (Q25, Q7j, M23b; ST)

1550-Q. (Russian.) Determination of Residual Deformations by the Method of Transparent Optically-Sensitive Films. N. I. Prigorovskii and P. T. Bogdyl'. Zavodskaya Laboratoriya, v. 27, June 1961, p. 721-724.

A polarization microscope is assembled as a double polariscope to measure the residual deformations caused by strains beyond the yield point. Polariscope permits simultaneous viewing of two different photographs. (Q24c, Q25h, M21g, 1-52)

1551-Q. (Russian.) Relaxation and Creep Strength Tests Under Continuous Tensile Loading Until Failure. L. Ya. Liberman and N. V. Volkova. Zavodskaya Laboratoriya, v. 27, June 1961, p. 724-729.

Determination of the plasticity reserve, sensitivity to stress concentration and elongation during repeated tensile loading of E1612 austenitic steel, 20KH1M1F1 construction steel and 28KHVFTS steel. 4 ref. (Q3, Q24h, Q23p; ST)

1552-Q. (Russian.) Development of an Equation for Relaxation of Tensions. L. P. Nikitina. Zavodskaya Laboratoriya, v. 27, June 1961, p. 730-738.

Influence of initial elastic deformation and repeated loading on relaxation during stretching of steel. Concentration of plastic deformation. 7 ref. (Q3, Q24h; ST)

1553-Q. Neutron-Induced Changes in Notch Ductility of Reactor Pressure Vessel Steels. L. E. Steele and J. R. Hawthorne. American Nuclear Society, Transactions, v. 4, June 1961, p. 92-93.

Effect of irradiation, irradiation temperature (200-550° F.) and annealing on ductile to brittle transition temperature of A212B, A302B, A201 and SA336 steels in the form of plates, forgings and weldments. (Q23r, 2-61, 2-64, 2-67; ST, 4-51, 4-53, 7-51)

1554-Q. Application of New Cobalt-Base Alloy in Metallurgical Furnaces. Metal Treating, v. 7, Aug-Sept. 1961, p. 40, 45.

Physical and mechanical properties of UMCo 50 containing less than 0.1% and

1-2% carbon. Applications include water quenching baskets, electrodes for salt-bath furnaces and metallic shields for refractory bricks. (Q-general, 17-57; Co-b)

1555-Q. Porous Metals Get Rid of Foreign Parts. H. F. Johnson. Canadian Metalworking, v. 24, Sept. 1961, p. 44-47.

Controlled porosity metal powders used as filters easily remove particles as small as 2 microns. They have excellent shock resistance and ductility, especially when compared to ceramic type filters. They also give good flow/pressure drop characteristics. (Q-general; 6-71)

1556-Q. (Japanese.) Abrasion Test of High Manganese Point. Akira Yagi. Osaka Industrial Research Institute, Bulletin, v. 12, Jan. 1961, p. 45-53.

Laboratory and outdoor testing of high Mn and chromium-manganese steel used for railroad rails and wheels to determine abrasion characteristics. Test effects on hardness, wear amount, antishock toughness and sliding friction. 11 ref. (Q9, Q29, 1-54, T23; ST, Mn, Cr)

1557-Q. (Japanese.) The Effect of Atmosphere on the Frequency Effect in High Temperature Fatigue of a Carbon Steel. Kichiro Endo. Japan Society of Mechanical Engineers, Transactions, v. 27, July 1961, p. 1107-1112.

Use of dried town gas as an inert environment to study the influence of high temperature oxidation and gas atmosphere on corrosion fatigue at various temperatures and cyclic frequencies. At 550° C. the fatigue strength is higher in gas than in air. 18 ref. (Q7a, R1h, 1-54, 2-62, 2-66; CN, RM-m)

1558-Q. Low Alloy Constructional Steels--The Influence of Chemical Composition on Their Mechanical Properties. A. G. Haynes. Research Applied in Industry, v. 14, Sept. 1961, p. 367-376.

The effects of alloy and impurities on microstructure after heat treatment and on tensile and fatigue strength and impact resistance. Application to 18% Ni-Co-Mo steel with ultra high tensile strength and ductility. 13 ref. (Q-general, N8a, 2-60, 3-69; AY, Ni, Co, Mo)

1559-Q. (Japanese.) X-Ray Study on Fatigue of Metals. Shuji Taira and Kazuo Honda. Japan Society of Mechanical Engineers, Transactions, v. 27, July 1961, p. 1066-1073.

Observation of the half value breadth of intensity distribution curves taken from X-ray diffraction lines. Fatigue sequential stages are analyzed as they relate half value breadth and to the possibility of nondestructive prediction of fatigue life in cast iron and steel. 20 ref. (Q7, S13e; CI, ST)

1560-Q. High Temperature Materials--Today and Tomorrow. Materials in Design Engineering, v. 54, Aug. 1961, p. 127-128, 145-146, 148.

Summary of five AIME papers on the present and future status of Co, Ni, Ta, W, Mo, Cb and their alloys, graphite and refractory compounds and high temperature coatings for Mo, Cb and Ta. Effects of temperature and stress on mechanical properties and structure. (Q-general, M26, 2-61, 3-66; Co, Ni, Ta, W, Mo, Cb, NM-k36, SGA-h)

1561-Q. The Influence of Base-Lubricant Viscosity and Boundary Additions on Surface Contact and Friction During Metal Deformation. L. H. Butler. Institute of Metals, Journal, v. 89, Aug. 1961, p. 449-455.

Compression tests on annealed and workhardened sheet Al testpieces, the die/metal interfaces being either unlubricated or lubricated with pure paraffinic-base and compounded lubricants. Increase of the viscosity of the base lubricant and the presence of small percentages of a boundary additive (oleic acid) decreases the extent of matching between the die and deforming surface, and with it the surface reflectivity and interfacial coefficient of friction. 9 ref. (Q9p, 18-73; Al-b, 4-53)

1562-Q. The Tensile Properties of Heavily Deformed Molybdenum After Neutron Irradiation. D. N. Sethna, A. A. Johnson, K. J. Proud and S. S. Sheinin. Institute of Metals, Journal, v. 89, Aug. 1961, p. 476-478.

The ductile-brittle transition temperature of heavily swaged commercial purity Mo is measured before and after irradiation to doses of up to 4×10^{19} nvt. with tests in a Hounsfield tensometer at a strain rate of 0.88×10^{-4} sec^{-1}. Data are given for tensile strength, yield and brittle fracture stress, elongation and

reduction in area as a function of temperature. 7 ref. (Q27, Q23r, 2-61, 2-67, 3-68; Mo-a)

1563-Q. Hot-Hardness of Aluminium Alloys Containing Various Amounts of $CuAl_2$. E. R. Petty. Institute of Metals, Journal, v. 89, Aug. 1961, p. 478-479.

Vickers hardness tests on extruded wire specimens containing 1-40% Cu and heat treated at the extrusion temperature (530° C.) for 1/2 hr. Effect of composition and resultant $CuAl_2$ dispersion on hot hardness at 20-500° C. 4 ref. (Q29p, 2-60, 2-64; Al-b, Cu)

1564-Q. The Influence of Quenching on Twinning in Zinc Single Crystals. Katsumi Okada and Shigeyasu Koda. Institute of Metals, Journal, v. 89, Aug. 1961, p. 479-480.

Effect of clustering of quenched-in vacancies as a function of quenching strain on twin formation in 99.998% Zn crystal specimens quenched from 320-0° C. Data are given for stress-strain and orientation relations. 5 ref. (Q24b, M26s, N7, 2-64, 3-68, 3-72; Zn, 14-61)

1565-Q. (Japanese.) Relation Between Slack-Quenched Homogeneous Structures and Mechanical Properties of Spring Steel. Michira Uchiyama, Fujio Seki and Kazunori Kamishohara. Tetsu-To-Hagane (Iron and Steel Institute of Japan, Journal), v. 47, Aug. 1961, p. 1163-1169.

Specimens of Si-Mn (SUP6), Mn-Cr (SUP9) and C (SUP3) spring steels with sorbitic, pearlitic, bainitic and martensitic as-quenched structures are tempered to 300-500 Brinell hardness and subjected to torsion, bending, fatigue and impact tests. Mechanical properties, particularly fatigue and proportional limits, are related to microstructures. 22 ref. (Q-general, M27, N8, 2-64, 3-73; SGA-b, ST)

1566-Q. (Japanese,) Effect of Nickel and Boron on Properties of 18CR-12Nickel Stainless Steel. Ryuichi Nakagawa and Yasuo Orghro. Tetsu-To-Hagane (Iron and Steel Institute of Japan, Journal), v. 47, Aug. 1961, p. 1169-1174.

Aging behavior, microstructure, precipitation phenomena, oxidation resistance, creep and tensile properties and Vickers hardness of austenitic stainless specimens containing 0.052-0.207% N or 0.05-0.2% B are investigated by mechanical testing and X-ray diffraction after aging at 600-750° C. and solution treatment at 1100° C. for various times. 6 ref. (Q-general, M27, N7, R1h, 2-60, 2-65; SS-e, N, B)

1567-Q. (Translation-AIP.) The Elastic Properties of Crystals--Review. K. S. Aleksandrov and T. V. Ryzhova. Soviet Physics--Crystallography, v. 6, Sept-Oct. 1961, p. 228-252.

The elastic constants of crystals of 33 elements (and various compounds of these) in the cubic, monoclinic, rhombic, tetragonal, trigonal and hexagonal systems are determined as functions of temperature and stress-strain relations and are analyzed in terms of Raman-Laual theory. 180 ref. (Q21, 10-54; 14-61)

1568-Q. (German.) Internal Friction of Uranium. A. I. Daskovoskij, A. I. Eustjuchin, E. M. Savickij and D. M. Skorov. Kernenergie, v. 4, May 1961, p. 404-408.

Investigation of the influence of temperature and structure in a torsion pendulum under vacuum at 20-850° C. using cold drawn heat treated wires of 0.98 mm. diameter. (Q22, 1-53; U)

1569-Q. Which Carbide Grade Is Best? Production, v. 48, Sept. 1961, p. 72-73.

Comparison of physical and mechanical properties and steel cutting applications of Carboloy grades 78B and 370 carbides. Influences of TaC and Co content and temperature deformation resistance on Rockwell A hardness and transverse rupture strength. (Q-general, P-general, G17, 2-60, 2-62, 17-52; W-b, Ta, Co, 6-69)

1570-Q. (German.) Significance of Relations Between Tensile Testing Data and Bursting Pressure Data of Aluminum Foils. E. Amann and H. Langen. Schweizer Archiv, v. 27, July 1961, p. 313-325.

Tensile testing of hard and soft Al foils (Al 99.5 and Al 99.3) of various thickness and of different rolling directions and bursting tests. Relation between tensile testing data and bursting pressure measurements. 25 ref. (Q27, Q10b, 1-54; Al, 4-56)

1571-Q. (Russian.) Influence of Substructure on Creep of Nickel. V. M. Rosenberg. Fizika Metallov i Metallovedenie, v. 11, June 1961, p. 899-909.

Interference microscopic determination of the influence of polygonization caused by deformation and annealing on the speed of the fine and coarse creep inside the grain and on the relative displacement of the grain on the surface. 25 ref. (Q3, 3-71; Ni)

1572-Q. (Russian.) A Single Equation for Plastic Dilation of Metals. G. P. Zaitsev. Fizika Metallov i Metallovedenie, v. 11, June 1961, p. 910-918.

Development of an equation applicable to any technical metal for determining values of elongation and contraction. Influence of the metal plasticity constants on the relationship between tension and deformation. 7 ref. (Q24, 3-66)

1573-Q. (Russian.) Protracted Hardness of Low Melting Point Alloys at Different Temperatures. V. P. Shishokin and L. N. Baxilevskii. Fizika Metallov i Metallovedenie, v. 11, June 1961, p. 942-943.

Determination of mechanical properties of metals and eutectic alloys by testing their hardness under stress for different periods of time. 6 ref. (Q29, Q-general, 3-66, 3-67)

1574-Q. Alloys for Aircraft Gas-Turbine Rotor Blades. E. Glenny. Foundry Trade Journal, v. 111, Sept. 7, 1961, p. 293-302.

Typical compositions of high temperature Ni-base alloys; stress to rupture and creep properties; short-term tensile properties; mechanical and thermal fatigue characteristics. It is generally agreed that an increase in temperature of some 50-100° C. is the most that can be expected from conventional alloys. 24 ref. (Q-general, T24b, 2-62; Ni-b, SGA-h, 17-57)

1575-Q. (German.) Adhesive Strength of Metal Coatings on Ceramics. J. Kotowski and J. Muschaweck. Vakuum-Technik, v. 10, June 1961, p. 141-145.

Microscopic investigation and measurement of adhesive strength of brazable Mo-Mn coatings on ceramics containing 85% Al_2O_3 as influenced by burning temperature. Technology of sintering of Mo-Mn metal powders on surface of ceramics under hydrogen atmosphere at 1000-1600° C. (Q10c, H14h, 2-62; Al, Mo, Mn, 6-68, 6-70)

1576-Q. (German.) Development in the Field of Reinforcing Steels. Safety Assessments. M. Ros and A. Eichinger. Osterreichisches Ingenieur-Archiv, v. 15, 1961, p. 172-175.

Field point, tensile strength, elongation, bending strength, contraction, stress corrosion resistance, fatigue strength and creep of various steels used to reinforce concrete are considered in terms of safety requirements. (Q-general, R11s, T26; ST, 17-57)

1577-Q. Foil Tester Takes New Approach. Iron Age, v. 188, Sept. 28, 1961, p. 97.

Hydraulic bulge tester cups a punched disk to register the materials' yield plus ductility. Tests show that bulge height at failure is an adequate criterion of ductility. Application to heat treated 17-7 PH stainless steel. (Q10b, 1-52; SS, 4-56)

1578-Q. Reports on Fatigue Failures. British Welding Journal, v. 8, Sept. 1961, p. 70s-78s.

Reports from Commission XIII of the International Institute of Welding on fatigue failure of welded assemblies in service. Failures noted include bottom plating on low-tonnage motor vessels. Welded water tanks of locomotive tenders and truck frame longitudinal member. (Q7b, Q7k, T26, T22g, T26q; 7-51, 11-63)

1579-Q. Observations on the Results of Torsion Relaxation Tests Carried Out on Four Typical Heat-Resisting Steels. P. Brozzo. British Welding Journal, v. 8, Sept. 1961, p. 79s-82s.

Relaxation tests under torsion load for Cr and Cr-Mo heat resisting steels previously heat treated. Relaxation curves plotted which indicate effect of temperature on elastic limit and creep deformation and the influence of stress on the curves themselves. (Q1c, 2-61, 3-66; ST, SGA-h)

1580-Q. Selecting Lightweight Metals. R. E. Johnson. Machine Design, v. 33, Sept. 28, 1961, p. 168-169.

High-temperature properties are tabulated by plotting a strength-cost-density ratio against temperature. Data obtained for Ti-Mo-Co, Ti-Mo,

W-Ta, Al-3 Mo-IV Ti, Rene 41, Inconel X alloys and PH 15-7 Mo stainless steel for applications at temperatures to 2800° F. (Q-general, 2-62; EG-a39, 17-57)

1581-Q. (German.) Investigation of Scattering of Blank Hardness of Alloyed Case Hardenable Steels. Sepp Ammarellar, Walter Knorr and Gerhard Tacke. Archiv fur das Eisenhuttenwesen, v. 32, July 1961, p. 461-466.

Measurement of blank hardness of normalized disk specimens (5, 10 and 20 mm. thick) of 16 MnCr 5 steel with 0.16% C and 20 MnCr 5 steel with 0.2% C and comparison with end-quench hardness. Statistical evaluation of reproducibility of blank hardness test results. (Q29, 2-64; AY)

1582-Q. (German.) Investigation of Hardness as Influenced by Testing Load in the Range of Small Testing Loads. Werner Schmidt. Archiv fur das Eisenhuttenwesen, v. 32, July 1961, p. 467-473.

Microhardness testing of pure iron, high-speed steels (1.2-1.5% C, 4% Cr, 1-3.5% Mo, 4.5-10% Co, 3.5% V, 2% W) and hard metals (6-25% Co, bal. WC) at varying loads using indenters of different shape. Influence of testing load on measured hardness. (Q29q; Fe-b)

1583-Q. (German.) Plastic Deformation of Neutron Irradiated Copper Single Crystals. Uwe Essmann, Siegfried Mader and Alfred Seeger. Zeitschrift fur Metallkunde, v. 52, July 1961, p. 443-454.

Investigation of workhardening by tensile stressing at temperatures from 90-513° K. and microscopic and electron microscopic (replica method) examination of surface phenomena (gliding mechanism) of neutron-irradiated Cu single crystals of the same orientation. Comparison with nonirradiated specimens. (Q23a, Q27, 2-67, 3-68, 3-72; Cu, 14-61)

1584-Q. (German.) Relations Between Stress-Strain Curves and Material Characteristics of Plastic Metallic Materials. Walter Panknin and Galal S. A. Shawki. Zeitschrift fur Metallkunde, v. 52, July 1961, p. 455-461.

Equations for computation of stress-strain curves, tensile strength, workhardening and deformation work are verified by tensile testing of sheets of various materials including V2A steel, AlMn alloy, CuNi alloy (62% Cu, 18% Ni) and brass. (Q27, Q23a, 1-53, 2-60, 3-68; ST, Al-b, Cu-b)

1585-Q. Hydrogen Embrittlement of High Tensile Steels During Chemical and Electrochemical Processing. L. E. Probert and J. J. Rollinson. Electroplating and Metal Finishing, v. 14, Sept. 1961, p. 323-326, 342.

Factors affecting embrittlement including carbon content, ultimate tensile strength and hardness of the steel and contaminating properties of the process involved. Debrittlement heat treatment and effect of differential pressures at the surface of high tensile steels. (Q26s, 2-60, 2-64, 3-74; ST, SGB-a)

1586-Q. Faster, Less Expensive Creep Data. Michael Korchynsky. Materials in Design Engineering, v. 54, Sept. 1961, p. 124-126.

Master diagram correlates material, temperature, stress, creep rate and rupture time. The diagram can be used to choose a material that will operate at a given temperature, stress and creep rate. If the material has already been selected, then the creep rate or rupture time can be determined at given stress and temperature levels. (Q3, 17-57)

1587-Q. Hydrogen Embrittlement of High Strength Steels. Larissa Domnikov. Metal Finishing, v. 58, Sept. 1961, p. 52-55.

Study of brittleness as affected by electrodeposition of Zn, Cd, Cu, Cr, Sn and Pb. Plastic properties are measured as functions of electrolyte solutions, plating time, current density and plating metal. (Q26s, L17c; ST, SGB-a)

1588-Q. (Translation-Brutcher no.5068.) Mechanical Properties of Steel Improved by Combined Heat and Ultrasonic Treatment. E. A. Al'fran. Izvestiya VUZ-Chernaya Metallurgiya, Sept. 1960, p. 160-166.

Previously abstracted. See item 909-Q, 1961. (Q23r, Q29n, M27, 1-74, 2-64; AY)

1589-Q. (Translation-Brutcher no. 4316.) Embrittlement of 20% Cr, 14% Ni, 2.5% Si

Steel During Aging at 500-650° C. A. V. Tikhomirov. Metallovedenie i Obrabotka Metallov, v. 8, Aug. 1958, p. 22-25.

Study of 0.08% C, 1% Mn, 2.5% Si, 20% Cr, 14% Ni, 0.025% P, 0.012% S steel as-delivered, as-austenized and stabilized for susceptibility to embrittlement and intergranular corrosion during 1500 hr. of aging between 930 and 1200° F. Variation of tensile and impact properties during aging; causes of brittleness; impact toughness as criterion. (Q26s, R2h, 2-65; SS)

1590-Q. (Translation-Brutcher no. 5115.) Attenuation of Ultrasonic Waves in Chrome-Nickel Austenitic Steels. P. Midecke. Materialprufung, v. 3, Jan. 1961, p. 1-4.

Previously abstracted. See item 491-Q, 1961. (Q8g, 1-74; SS, 4-51, 5)

1591-Q. (Translation-Brutcher no. 5170.) Effect of Solution Treatment on High-Temperature Properties of 18-8 Ti Steel. K. Ono. Tetsu-To-Hagane (Iron and Steel Institute of Japan), v. 47, Mar. 1961, p. 552-554.

Lack of consistent data on stress-rupture properties of 18-8 Ti stainless. Data on compositions and solution heat treatments. Effect of solution treating temperature on tensile properties, stress-rupture times; rupture strength and grain size of 18-8 Ti versus 18-8. (Q3q, 2-62, 2-64; SS, Ti)

1592-Q. (Translation-Brutcher no. 5236.) Effect of Boron Additions Upon Low-Temperature Impact Toughness of Austenitic Steel. V. V. Levitin. Fizika Metallov i Metallovedenie, v. 11, Apr. 1961, p. 564-567.

Effect of 0.0005 and 0.005% B upon impact toughness of 0.08% C, 18% Cr, 9.3% Ni, 1.2% Mn steel at subzero temperatures after various periods of aging (Tables 1 and 2) at various temperatures. Results of micro-examination; appearance of fracture faces. (Q6, 2-62, 2-60; SS-e, B)

1593-Q. Structural Changes in Metallic Coarse Grains Subjected to Explosive Loads. S. Singh and R. C. Deshpande. Indian Institute of Metals, Transactions, v. 14, Mar. 1961, p. 68-74.

Metallographic observation of deformation modes in strain-annealed 3% Si steel and commercial Al, the steel exhibiting a highly deformed and twinned region adjoining a recrystallized region at the edge of the explosive crater with the Al specimen showing a narrow deformed region. Twin direction and spacing, microhardness and fracture appearance are related to shock velocity and the plastic properties of the metals. 14 ref. (Q24a, Q26, M-general, 3-67, 3-68; Al, Fe-b, Si)

1594-Q. The Abrasion of Materials by Carborundum Paper. A. Selwood. Wear, v. 4, July-Aug. 1961, p. 311-318.

Measurement of the rate of wear of metals including mild steel, brass, Al alloy, Pb, Sb, WC and Ni and of plastic, ceramics, rubber and nylon under standard conditions of abrasion with carborundum paper. Importance of extensibility as well as hardness in determining the resistance to this type of wear. 5 ref. (Q9)

1595-Q. Investigation of Delayed-Cracking Phenomenon in Hydrogenated Unalloyed Titanium. R. A. Wood, H. R. Ogden and D. N. Williams. Defense Metals Information Center, Battelle Memorial Institute, DMIC Memo. 124, Aug. 30, 1961, 18 p.

Study of strain-aging embrittlement effects and the effect of hydrogen and oxygen content on delayed cracking, structure and tensile, stress-rupture and impact strength of vacuum annealed and hydrogenated Ti. 18 ref. (Q26, Q-general, 2-60; Ti-a)

1596-Q. (Translation.) Plastic Deformation of Textured Beryllium. Amoenko, Tukhunskii, Finkel, Azhazha and Shpazin. Soviet Physics--Solid State, v. 3, Sept. 1961, p. 580-584. (Translation of Fizika Tverdogo Tela, v. 3, Mar. 1961).

Be foil of 99.987% purity is obtained by condensation of Be vapor in vacuum (10^{-6} mm. Hg) on a Mo substrate. The texture of the foil is observed as a function of the condition of the substrate, the foil having its basal (001) plane coincident with the condensate for a neutral substrate and a 45° inclination for a rolled, degassed Mo substrate. Temperature variation of plasticity and elongation is determined for three foil textures at 20-800° C. (Q24, C22h, 1-53, 2-61; Be, 4-56)

1597-Q. (Translation.) Mechanism of Brittle Rupture of Metal Crystals. Kochanova, Shchukin and Likhtman. Soviet Physics--Solid State, v. 3, Sept. 1961, p. 656-661. (Translation of Fizika Tverdogo Tela, v. 3, Mar. 1961).

The role of shearing and normal stresses in brittle rupture are analyzed in terms of plastic deformation and resulting stress concentrations. The size of cracks developed in amalgamated Zn monocrystals subjected to various deformations is measured and compared to theoretical values. Breaks resulting from brittle rupture are explained as a function of edge and screw dislocations. (Q26s, M26b, 2-60, 3-66; Zn, 9-72, 14-61)

1598-Q. Complex Stress Creep Fracture of Copper at 250° Under Vibratory Stress. A. E. Johnson, J. Henderson and B. Khan. Engineer, v. 212, Aug. 25, 1961, p. 304-308.

Fracture tests are conducted on Cu under pure and combined stress creep, fatigue and pure stress fatigue conditions. Effect of tensile and shear stress on cracking characteristics are examined by metallographic methods. (Q3, Q26, 3-66; Cu)

1599-Q. (French.) Improvement in the Wear Resistance of Austenitic Steels Containing Manganese. F. J. Maratray and T. E. Norman. Revue de Metallurgie, v. 58, June 1961, p. 489-506.

Study of microstructure and physical properties of austenitic steel with high C and low Mn content, stabilized with Mo. Comparison with Hadfield steel and nickel hard cast iron. 17 ref. (Q9n, M27, P-general; ST, Mn, Mo)

1600-Q. (Japanese.) Mechanical Properties of Molybdenum-Copper Cast Iron Heat Treated Isothermally. Tohei Ototani and Youichi Tokunaga. Imono (Japan Foundrymen's Society, Journal), v. 33, June 1961, p. 404-411.

The S-curve is obtained for 0.4% Mo-1.3% Cu cast iron after austenitizing at 900° C. using dilatometric and metallographic methods with subsequent investigation of mechanical properties after isothermal treatments at 250-675° C. Data are given for tensile strength, hardness, wear resistance and toughness, with properties and microstructure being related to bainitic and pearlitic transition, martempering and isothermal treatment temperatures and stabilizing influence of undecomposed austenite in the matrix. 16 ref. (Q-general, N8g, 2-64; CI)

1601-Q. (Japanese.) The Wear Resistance of Spheroidal Graphite Cast Steel Having Various Matrices. Yoshihiko Abe. Imono (Japan Foundrymen's Society, Journal), v. 33, June 1961, p. 421-427.

Comparative wear in dry abrasion tests of different matrix layers obtained by normalizing, oil quenching and tempering of specimens at 200-850° C. for various times. Effect of tempering temperature, workhardening and oxidizing and nitriding reactions on macro and microstructure and matrix appearance. Influence of combination of identical and extremely different layers on wear. (Q9, M26, N8a, 2-64; ST)

1602-Q. Mechanical Properties of Sandwich Structures. Space/Aeronautics R & D Technical Handbook, v. 4, 1961-1962, p. B18-B20.

Nomographs for determining the allowable bending moment of honeycomb panels, the heat gradient through stainless steel and Al honeycomb panels and the weight of honeycomb panels of PH15-7Mo and 17-7PH. (Q-general, P10, P11k; SS, Al, 7-59)

1603-Q. Cryogenic Materials. Space/Aeronautics R & D Technical Handbook, v. 4, 1961-1962, p. H18-H19.

Mechanical properties for the following materials, for applications to liquid hydrogen temperatures--AISI 301 and AISI 304L stainless steels, ASTM A353 steel and a 6Al-4V Ti alloy. (Q-general; SGB-r, SS, CN-g, Ti-b)

1604-Q. High-Strength Steel Extrusions. Space/Aeronautics R & D Technical Handbook, v. 4, 1961-1962, p. I12-I13.

Mechanical properties, heat treatment and availability of steel extrusions, mainly of the AISI 4100 and 4300 low-alloy series for aerospace applications. Tabulation of parameters governing specification of materials. (Q-general, J-general, T24e; SGB-a, AY, 4-58, 17-57)

1605-Q. (French.) Fatigue Strength of Steel Springs. Pierre Caffier. Mecanique Electricite, v. 45, May 1961, p. 53-58.

Springs of alloy and carbon steel are fatigue tested indicating influences of composition, low temperature (to -50° C.) and surface roughness and establishing parameters for design. 9 ref. (Q7a, 1-53, 2-60, 2-63, 3-71, T7c, 17-51; AY, CN)

1606-Q. (Russian.) Study of Technological Plasticity of Stainless Steels. N. I. Korneev, H. M. Morokhovets, F. I. Filatov and V. P. Manich. Kuznechno-Shtampovochnoe Proizvodstvo, Apr. 1961, p. 9-12.

Testing stainless steels for tensile, compression and impact resistance strengths as a function of temperature (600-1300° C.) and deformation with tabulation of results. (Q-general, 2-61, 3-68; SS)

1607-Q. How Metals React in Space. Steel, v. 149, Oct. 2, 1961, p. 58-59.

Steel rod, vinyl, Cd, Zn, Ti, W, Pt and alloys are tested in simulated outer space conditions to observe changes in tensile strength and brittleness and such phenomena as metal evaporation and cold welding as functions of high temperatures and low pressures. (Q-general, T24e, 2-62, 3-74; 17-57)

1608-Q. (Italian.) Influence of the Graphite Form and Distribution on the Quality of Piston Rings Made of Alloyed Cast Iron. Fonderia, v. 10, Aug. 1961, p. 337-340.

Inoculation and casting of Fe alloyed with Cr, Ni, V and die. Determination of wear resistance and thermal stability as a function of eutectic and lamellar graphite. Brinell hardness, eutectic coefficient, humidty and compression resistance. (Q-general, E-general, N8, 2-60, 3-71; CI, Cr, Cu, Ni, V, 5)

1609-Q. Resonant Strength of a Vibrating Member Having Two Degrees of Freedom With Hysteresis Damping. M. G. Sharma. International Journal of Mechanical Sciences, v. 3, Aug. 1961, p. 118-128.

Comparison of experimental and theoretical damping characteristics of various alloy shafts of Al, Mg, Ti and steel (SAE 1020, SAE 4130). Only hysteresis of material damping is considered in the energy dissipation of the fixed shafts. Fluctuating loads are induced to produce stresses which become critical when resonance occurs in either of the co-ordinates of the vibrating system. 7 ref. (Q21, Q8, 1-54; ST, Al-b, Mg-b, Ti-b)

1610-Q. NBS Conquers Metal Fatigue. Iron Age, v. 188, Oct. 5, 1961, p. 72-73.

Smooth and notched test bars of 4340 steel, Cu-Be alloy, 6061-T6 Al alloy and 17-7 PH stainless steel are coated with dodecyl-alcohol and subjected to fatigue tests which indicate a reduction of fatigue crack propagation rate. Nominal stress amplitude and fatigue life values are listed for clean and coated samples. (Q7, L26; SS, ST, Cu-b, Be, Al-b, NM-b)

1611-Q. (Japanese.) The Wear Resistance of Various Cast Irons Having Different Graphite Shapes. Yoshihiko Abe. Imono (Japan Foundrymen's Society, Journal), v. 33, July 1961, p. 496-502.

Dry abrasion wear testing of malleable, nodular and flake graphite cast irons and nodular cast steel after normalizing at 850° C. for 2 hr. Effect of graphite shape, dimension and distribution in the matrix on wear resistance, surface roughness and Rockwell B microhardness. (Q9, N8s, 2-60, 2-64; CI, ST)

1612-Q. (Japanese.) Damping Capacity and Mechanisms in Cast Iron. Hifumi Hotta. Imono (Japan Foundrymen's Society, Journal), v. 33, July 1961, p. 511-518.

Measurement of damping capacity in gray, nodular, malleable and Meehanite cast irons and cast steel as a function of composition up to 4.05% carbon, bending strain and structural characteristics. Damping capacity is unchanged for up to 3% carbon, but increases sharply thereafter due to the carbon mass effect and is affected by the shape of the graphite in the matrix and by strain amplitude. The high damping capacity of gray iron is attributed to dislocation movement due to stress concentration. 9 ref. (Q8g, M26c, 2-60, 3-66, 3-68, 3-73; CI, ST)

1613-Q. A Summary of the Theory of Fracture in Metals. J. W. Spretnak. Defense Metals Information Center, Battelle Memorial Institute, DMIC Report 157, Aug. 7, 1961, 64 p.

Investigation into discrepancies between theoretical and observed strengths of metals, alloys and minerals including Cu, Al, Fe, Mo, Cr, Mg, Zn, Bi, Te, Al-Zn, Si-Fe and Zn-Cd alloys and rock salt. The relationship of plastic flow to crack initiation is considered in terms of lattice imperfections, polycrystalline aggregate characteristics of metals, anisotropy and shear deformability. 51 ref. (Q-general, 3-71, 3-72)

1614-Q. A Theory for the Occurrence of Intrinsic Resonances in Stressed Solid Materials. S. R. Bodner. Society of Rheology, Transactions, v. 5, 1961, p. 297-316.

Measurement of resonance frequencies in samples of loaded, prestressed Al. Discussion of a theory attributing some of the unpredicted resonances observed to dislocations in the material which make it possible for self-excited oscillations to occur. 21 ref. (Q22, Q8, M26b, 3-66; Al)

1615-Q. Columbium Treated, Mild Carbon, Semikilled Steels. C. L. Altenburger. Paper from "Regional Technical Meetings, 1960". American Iron and Steel Institute, New York 17, 1961, p. 59-78.

Tensile properties, toughness, grain size and hardenability of steels as affected by Cb content. Weldability and formability characteristics in fabrication of steel sheet and plate. (Q-general, J5, M27c, 2-60; CN, Cb)

1616-Q. Cause and Effect of Work Hardening in Austenitic Stainless Steels. H. E. Tomlinson, Jr. Paper from "Regional Technical Meetings, 1960". American Iron and Steel Institute, New York 17, 1961, p. 107-115.

Correlation of tensile properties, Brinell hardness, corrosion resistance and magnetic permeability of these steels with workhardening mechanisms occurring through forming, flattening, cutting, explosive hardening and other mechanical hardening processes. (Q23a, Q-general, 2-64, 3-68; SS-e)

1617-Q. Diaphragm Action in Light Gage Steel Construction. Arthur R. Nilson. Paper from "Regional Technical Meetings, 1960". American Iron and Steel Institute, New York 17, 1961, p. 117-145.

Measurement of the in-plane shear resistance of light gage steel panel with data given for failure shear and net deflection at 50% of failure load for various welded systems. Application of data to lateral bracing of steel buildings and beams and reinforcement of folded plate roof systems. (Q2g, T26, 17-51; ST, 7-51)

1618-Q. On Tensile Properties of the Butt Welds in Alpha + Beta Titanium Alloys at High Temperature and the Beta→Alpha Transformation Process in Its Alloys. Minoru Okada and Shiged Shin. Osaka University, Technology Reports, v. 11, Mar. 1961, p. 155-172.

Hardness and microstructure after beta-solution treatment, quenching and tempering at 450° C. are investigated to derive a mechanism for the transformation and hardening process. 7 ref. (Q27a, 2-64, M27, N7d; Ti-b)

1619-Q. (French.) Measuring the Elongation of Cast Aluminum Alloys. Claude Mascre. Fonderie, no. 184, May 1961, p. 185-190.

Tensile tests on steel and sand or mold-cast Al alloys. Relation between ingot diameter and tensile strength of sample. (Q23p, 1-54, 3-73; ST, Al-b, 5)

1620-Q. (Book.) Toughness and Brittleness in Metals. N. J. Petch, E. A. G. Liddiard, G. M. Boyd and H. M. Finniston. 1961. 103 p. Institute of Metallurgists, 4 Grosvenor Gardens, London S.W., by Iliffe Books Ltd., Dorset House, Stamford St., London, S.E. 1, England.

Papers delivered at the 14th Annual Refresher Course of the Institution of Metallurgists, Eastbourne, 1960. Metallurgical, engineering and environmental factors are discussed including influence of physical and chemical properties, heat treatment, composition and fabrication procedures. Theoretical, testing and metallographic analysis of modes, kinds and causes of fracture failure. 79 ref. (Q23, Q-general, P-general, 2-60, 2-64, 3-68, 10-54)

1621-Q. The Definition and Significance of Toughness and Brittleness in Metals. N. J. Petch. Paper from "Toughness and Brittleness in Metals". Institution of Metallurgists, London, S.W. 1., by Iliffe Books Ltd., London, S.E.1., 1961, p. 3-10.

Influence of stress and stress concentration and strain aging on toughness and brittleness in mild steel and

Al alloys with emphasis on differences between tough and brittle fracture as affected by transition temperature. Theory of ductile-cleavage transition with calculations for stress factors. (Q23, Q26, N7e, 3-66, 10-54; CN, Al-b)

1622-Q. Engineering Aspects of Toughness and Brittleness in Metals. G. M. Boyd. Paper from "Toughness and Brittleness in Metals". Institution of Metallurgists, London, S.W.1., by Iliffe Books Ltd., London, S.E.1., 1961, p. 3-37.

Fractures in steel and Al alloy are classified emphasizing engineering characteristics. Factors affecting brittle fractures in service failure include stress, weldability, temperature, impact, speed, fatigue cracks, notch effects, loading, strain aging, cleavage, composition, inclusions, heat treatment and workhardening. 29 ref. (Q-general, K9s, 2-60, 2-61, 2-64, 3-66, 10-54; ST, Al-b)

1623-Q. Metallurgical Aspects of Ductility and Brittleness in Metals and Alloys. H. M. Finniston. Paper from "Toughness and Brittleness in Metals". Institution of Metallurgists, London, S.W. 1., by Iliffe Books Ltd., London, S.E. 1., England, 1961. p. 67-103.

Review of brittle-ductile transition phenomena as related to plastic deformation and crystal structure, strain-rate effects, stress, workhardening, grain size, additives, irradiation and preferred orientation. Brittleness characteristics of multiphase, heat treatable and precipitation hardening alloys. 30 ref. (Q23, Q26s, M-general, 2-60, 3-68, 3-73, 10-54)

1624-Q. (French.) Choice of Steel Grades. A. V. Frances. Metallurgie et la Construction Mecanique, v. 93, June 1961, p. 527-539.

Strength, ductility, machinability and weldability of low-alloy steels including spring steel, Si, Cr, molybdenum steel and wear resistant steel; and of high-alloy steels including austenitic manganese steel, W and stainless steel. 6 ref. (Q-general, K9s, 17-57; AY, SS, Cr, Mo, Mn, Si, W)

1625-Q. The Fatigue Strength of Vehicle-Engine Crankshafts. E. Gassner and W. Schutz. Engineers' Digest, v. 22, Sept. 1961, p. 79-81.

Comparative fatigue testing of crankshafts of 0.45% carbon steel and spheroidal-graphite cast iron. Determination of fatigue strength under maximum firing pressure in diesel and petrol engines. Evaluation of the relative bending moment at web center as a function of load cycles. 7 ref. (Q7a, T21b; CN, CI-r, 17-57)

1626-Q. The Mechanical Properties of Yttrium, Scandium and the Rare-Earth Metals. C. R. Simmons. Chapter 18 from "The Rare Earths". John Wiley & Sons, Inc., New York 16, 1961, p. 428-452.

Hardness, tensile properties and related elastic constants are determined, where possible, as a function of temperature and of the presence of impurities. 10 ref. (Q-general, 2-61, 3-69; EG-g45)

1627-Q. Titanium Alloys Tensile Modulus of Elasticity. Magnesium Products, Aug. 1961, insert (facing p. 6).

Room temperature elongation and tensile strength for alpha, beta and alpha-beta Ti alloys. Effect of high temperatures (70-1000° F.) on the modulus of elasticity. (Q21, Q23p, Q27, 2-61, 2-64; Ti-b, 11-62)

1628-Q. Lightweight Structures for Space Vehicles. Milford C. Childers and V. B. Koriagin. Society of Automotive Engineers, 420C, 1961, 8 p.

Materials tested from 1-100 hr. at 50-2000° F. include Rene 41, Inco 702 and Hastelloy X. Inflatable, insulated, cooled and sandwich structures are studied with special reference to the design of the vehicle. 20 ref. (Q-general, 2-61, T24e, 17-51; Ni-b, 7-59)

1629-Q. New Alloy Steel from Samuel Fox. Metal Treatment and Drop Forging, v. 28, Aug. 1961, p. 308.

Mechanical properties are summarized for a 15% Cr, 10% Ni, 6% Mn austenite steel with special attention to stress rupture and creep properties, weldability, structural stability and oxidation resistance at elevated temperatures. (Q-general, A-general, K9s, 2-60; AY, SS)

1630-Q. Avoidance of Distortion in Heat Treatment. K. Sacks. Metal Treatment

and Drop Forging, v. 28, Aug. 1961, p. 317-323, 316.

Volume shape and dimensional changes such as stretching, shrinking and warping in martensitic and austenitic stainless steels due to cooling and transformation stresses. Elimination by adjusting alloy content, hardening temperature and quenching treatment. Influence of upset and anistropy on distortion correction. 6 ref. (Q25, J26, 2-61, 9-67, 9-74; SS)

1631-Q. (German.) Influence of Toughness on Behavior of Case-Hardening Steels in Static and Dynamic Bend Testing. Hans Brugger and Gerhard Kraus. Archiv fur das Eisenhuttenwesen, v. 32, Aug. 1961, p. 529-539.

Carburized and case hardened 15 CrNi 6, 20 MnCr 5, C 15 and 100 Cr 6 steels are submitted to testing on a rotary impact machine which permits kinematographic registration of the deformation. Yield and bend strengths are measured as a function of material toughness. (Q5, Q23, 1-53, 2-64; ST)

1632-Q. (German.) Influence of Annealing Temperature on Results of Static Bending Testing on Cutting and Free-Cutting Steels. Hans-Josef Becker. Archiv fur das Eisenhuttenwesen, v. 32, Aug. 1961, p. 557-560.

Measurement of hardness, bend strength and ductile fracture for 90 MnV 8, X 210 CrW 12 steels and BMo 9, DMo 5 and EV 4 free-cutting steels as influenced by annealing at temperatures from 100-640° C. (Q5g, Q23, Q29, 2-64; ST, SGA-k)

1633-Q. (German.) Testing Equipment for Evaluation of Hot Cracking of Metallic Materials. Karl Bungardt, Hans Preisendanz and Otto Mulders. Archiv fur das Eisenhuttenwesen, v. 32, Aug. 1961, p. 561-572.

Resistance to thermal shock by inductive temperature cycling and susceptibility to hot cracking are measured for heat treated X 30 WCrV 53 steel. (Q7j, Q10a, Q26s; ST)

1634-Q. Do It Better, Cheaper With Standards. Steel, v. 149, Oct. 9, 1961, p. 121.

Mechanical properties are tabulated for structural and engineering grades of carbon and low-alloy steel castings. (Q-general; CN, AY, 5)

1635-Q. Tungsten Crystals Are Ductile. Steel, v. 149, Oct. 9, 1961, p. 145.

Production of virtually pure (99.9975%) single crystals up to 10 in. in length and 0.2 in. in diameter having ductility at temperatures down to -330° F. (Q23p, 2-63, N12; W, 14-61)

1636-Q. (Russian.) Hardening of Molybdenum by Exposure to Neutrons. Sh. Sh. Ibragimov and A. N. Vorob'ev. Atomnaya Energiya, v. 11, Jan. 1961, p. 65-66.

Microhardness and electrical resistance are measured to determine the influence of irradiation and of hardening at 805-897° C. for various lengths of time. 4 ref. (Q29q, P15g, 2-64, 2-67; Mo)

1637-Q. Recent Research on Fatigue in Metals. P. G. Forrest. American Society of Naval Engineers Inc., Journal, v. 73, Aug. 1961, p. 519-528.

Survey includes stress distribution, fatigue of thick cylinders, effect of loads of varying amplitude, rate of crack propagation, use of low endurance metals, thermal fatigue at high temperatures, fretting corrosion, influence of inclusions on high-tensile steels and Al alloys and fatigue strength of welded structures. 67 ref. (Q7, R1f, 3-69, 7-51, 10-54, 17-57)

1638-Q. (Russian.) Resistance to Plastic Deformation of Hard Titanium-Zirconium Alloys at Variable Temperatures. V. V. Hlazova and N. N. Kurnakov. Izvestiya Akademii Nauk SSSR--Metallurgiya i Toplivo, Mar. 1961, p. 67-72.

Creep resistance of Ti-Zr alloy at 300, 500 and 700° C. is determined by hot hardness and centrifugal bending tests and relationships are established between creep and composition. 16 ref. (Q3, 2-60, 2-61; Ti, Zr)

1639-Q. Aluminum Structural Engineering in Britain. R. M. Davies. Light Metals, v. 24, Sept. 1961, p. 236-239.

Mechanical strength of Al alloy struts and riveted or welded joints is tested by various techniques and calculations are made to determine failure load stress constants, strut slenderness ratio to stress curves and the relationship of design and joining techniques riveted and welded joint strength. (Q7k, 1-53; Al-b, 7-51, 7-53)

1640-Q. Instability of Semi-Brittle Steels at Room Temperature Under Torsional Impact. J. B. Hunt. Engineer, v. 211, Apr. 7, 1961, p. 551.

Impact, static and dynamic torsional testing of untreated solid mild steel cylindrical specimens. Effect of strain on fracture mechanism and instability. 5 ref. (Q26, 3-68; AY)

1641-Q. Fatigue Tests on "Mustang" Wings and Notched Aluminum Alloy Specimens Under Random Gust Loading With and Without Ground to Air Cycle of Loading. J. Y. Mann and C. A. Patching. Australian Defence Scientific Service, Aeronautical Research Laboratories, Mar. 1961, 26 p.

Determining endurance under a load sequence representative of flight loading both with and without ground to air cycles. The wings are made from 24S-T-Al alloy and the notched specimens from Al alloys D. T. D. 363A, D. T. D. 364B and 7178-T6. 12 ref. (Q7, 1-54, T24a; Al-b)

1642-Q. (Translation-ConBur.) Effect of Cathodically Reduced Hydrogen on the Properties of Metals. Popova and Sanzharovskii. Academy of Sciences of the USSR, Proceedings, v. 136, Jan. 2, 1961, p. 89-93.

Investigation of changes in mechanical properties of rolled iron, rolled nickel and electrolytic nickel, indicating a relationship between residual brittleness and the adsorbed hydrogen. Hydrogen pressure rather than adsorptional effects are responsible for reduction of mechanical strength. (Q26s, 1-54; Fe, Ni)

1643-Q. (French.) Composite Materials. B. Hedde D'Entremont. Mecanique Electricite, v. 45, May 1961, p. 65-69.

The principles that a brittle solid may exhibit the plastic properties of a ductile solid when limited to deformation in only one direction in compressive testing and that a ductile solid can show brittle fracture when exposed to ideal impact are applied to the strengthening of design of structure using nonhomogenous materials (for example, case hardened steel). 9 ref. (Q23, Q26r, 17-51, 17-57)

1644-Q. Nonbasal Glide in Dislocation-Free Cadmium Crystals. Pt. 1. $(10\bar{1}1)$ $(1\bar{2}10)$ System. P. B. Price. Journal of Applied Physics, v. 32, Sept. 1961, p. 1746-1750.

Electron-transparent, dislocation-free plates of Cd are deformed in tension parallel to the basal plane in an electron microscope at 25 to -150° C. The high strain rates causes twinning; slip, glide and edge dislocations are investigated. 10 ref. (Q24, 1-54; Cd)

1645-Q. Nonbasal Glide in Dislocation-Free Cadmium Crystals. Pt. 2. The $(11\bar{2}2)(\bar{1}\bar{1}23)$ System. P. B. Price. Journal of Applied Physics, v. 32, Sept. 1961, p. 1750-1757.

Plates of Cd are deformed under an electron microscope and glide, slip, screw dislocation loops are observed. These are compared with those observed in Zn on the basis of pyramidal glide as well as of loop formation. 19 ref. (Q24, 1-54; Cd, Zn)

1646-Q. Acoustical Study of Quench-Aging in Alpha Cu-Al Alloys. T. J. Koppenaal and M. E. Fine. Journal of Applied Physics, v. 32, Sept. 1961, p. 1781-1782.

The increase of Young's modulus is indicated to be a function of Al content and to correlate with the decrease in electrical resistivity. An effective activation energy for the diffusion is determined. 10 ref. (Q21a, P15g, 2-64; Cu, Al)

1647-Q. Friction of Molybdenum Diselenide. M. T. Lavik, T. Bruce Daniel and A. N. Abbott. Journal of Applied Physics, v. 32, Sept. 1961, p. 1795.

Friction coefficient measured in vacuum is found to vary with stop time from 5 min. to 695 hr. Data are also found for friction in MoS_2 crystals. 4 ref. (Q9p, 1-54, 1-73; Mo, Se)

1648-Q. Charged Dislocations in Ionic Crystals. F. Rueda and W. Dekeyser. Journal of Applied Physics, v. 32, Sept. 1961, p. 1799.

Crystals of NaCl, LiF and MgO are annealed, quenched and etched and measured with an electronic circuit. The etch pit distribution indicating charged dislocations is observed in doped and undoped crystals. Slip planes are observed. (Q24c, 1-54)

1649-Q. Ferritic Steel for Superheater Tubes. Engineering, v. 192, Sept. 15, 1961, p. 351.

Mechanical properties are given for Sandvik HT7, HT8 and HT9 12% chromium ferritic steel alloys for boiler tubes with emphasis on high temperature creep and stress rupture strength as a function of composition and hardening heat treatments. (Q-general, T26q, 2-60, 2-64; AY, 17-57)

1650-Q. (French.) Effect of the High Purity of Iron on Its Ability to Absorb Cathodic Hydrogen and on Its Low Temperature Embrittlement. Simone Besnard. Annales de Chimie, Mar-Apr. 1961, p. 245-283.

Armco iron, electrolytic iron and zone-melted iron are electrolytically polished and immersed in 10 N H_2SO_4 together with a Pb annode. A current of 10 amp. per sq. dm. is passed while the electrolyte temperature is held at -15° C. Hydrogen absorption is influenced by the Fe purity, its microstructure and crystal structure and the addition of sodium sulphide, $SbCl_3$ or As to the electrolyte. Effect of hydrogen on mechanical properties and embrittlement at the temperature of liquid nitrogen. (Q26s, 1-54; Fe)

1651-Q. (Russian.) Influence of Heat Treatment on the Anisotropy of the Mechanical Properties of Forged Steel. V. N. Trubin and I. Ya. Chernikhova. Kuznechno-Shtampovochnoe Proizvodstvo, May 1961, p. 5-9.

Investigation of the anisotropy of forged steel developed by stress, stretching out of nonmetallic inclusions and dendritic segregation. 9 ref. (Q24g, 2-64, 3-66, 3-69; ST, 4-51)

1652-Q. Analysis of Steel Stanchions Bent About Their Minor Axes. H. B. Harrison. Australian Journal of Applied Science, v. 12, Sept. 1961, p. 287-302.

Stress-strain relations, yield stress, flexural buckling and moment ratios are calculated for mild steel columns in terms of axial loads by the use of elasticity theory and approximation calculations. 10 ref. (Q25n, Q23b, 1-54; CN)

1653-Q. Metals and Alloys at Elevated Temperatures. G. J. Danek, Jr., H. H. Smith and M. R. Achter. Report of NRL (Naval Research Laboratory) Progress, Aug. 1961, p. 24. (Available as PB171321 from U. S. Office of Technical Services, Washington 25, D. C.) $1.25.

An optical method based on the determination of the radius of curvature of a strained sheet metal specimen is developed for measuring bending strains in the plastic range at 1500° F. Measurements are compared with those made with a resistance strain gage on Ni, Inconel X and 316 stainless steel. (Q5m, X28j, 2-62; Ni-b, SS, 4-53)

1654-Q. The Contamination of Platinum Metal Thermocouples. H. E. Bennett. Platinum Metals Review, v. 5, Oct. 1961, p. 132-133.

Embrittlement failure of Pt-Rh and Rh-Ir thermocouples heated in H in the presence of siliceous materials is investigated by metallographic methods through heating alloys containing 0.3% Si in H atmospheres at 1400° C. for various times. Hydrogen-influenced grain boundary diffusion of Si and formation of silicides are determined as the embrittling mechanism with prevention of hydrogen contamination by impermeable sheathing being suggested. (Q26s, 2-60, 2-62, 3-69; SGA-a, Pt-b, Rh-b, Ir)

1655-Q. Magnetomechanical Damping in Chromium. M. E. De Morton. Philosophical Magazine, v. 6, July 1961, p. 825-831.

Torsion pendulum testing of ordered specimens at -80 to 80° C. after tensile deformation. Damping hysteresis observed with changing temperature and strain amplitude below 40° C. and a marked reduction of strain-amplitude-dependent damping in this region when a biasing tensile stress is present is correlated with the suggestion that an antiferromagnetic domain structure exists in Cr below 40° C. 14 ref. (Q22j, Q22m, 2-61, 3-66, 3-68; Cr)

1656-Q. Stress Relaxation in Alpha-Iron at Low Temperatures. P. Feltham. Philosophical Magazine, v. 6, July 1961, p. 847-850.

Relaxation of the applied tensile stress at strains of up to 2% is studied at 77-358° K. in vacuum-annealed Fe containing 0.1% C. A relation previously derived for stress relaxation in Cu, in terms of melting temperature, tensile yield stress and the temperature

independent part of the yield stress, is found to be applicable, with the energy associated with the conservative migration of jogs in edge dislocations, equal to 6.4 kcal per g. atom. (Q3a, M26b, N3, 2-61, 3-66, 3-68; Fe-a)

1657-Q. Special-Purpose Brazing Alloys. Engineering Materials and Design, v. 4, Sept. 1961, p. 615.

Tensile strength, elongation, hardness, brazing temperature and industrial applications are given for alloys of Ag-Cu, Au-Cu, Au-Ni, Ag-Cu-Pd, Ag-Pd, Cu-Pd-Ni-Mn, Ag-Pd-Mn, Ni-Mg-Pd and Pd-Ni. (Q-general; SGA-f, 17-57)

1658-Q. (German.) Influence of Dimensions of Notched Tensile Testing and Notched Bending Testing Specimens According to Standard DIN 50127 on Testing Results. Harald Fiehn and Karl Teske. Materialprufung, v. 3, Aug. 1961, 289-296.

Tensile and bending testing of fusion welded butt joints using notched specimens according to DIN 50127 standard and 3-17 mm. thick flat sheet specimens of structural and boiler steel. Tensile strength, yield point, fracture elongation, fracture necking, bending angle and bending elongation as influenced by dimensions and shape of specimens. (Q5h, Q27d, 3-73; ST, 7-51)

1659-Q. (German.) Nondestructive Testing of Brazed Butt Joints of Copper Plates. Hans Krachter. Materialprufung, v. 3, Aug. 1961, p. 297-299.

Investigation of quality of bonding of butt-brazed Cu plates by X-ray and ultrasonic testing, comparative tensile strength and transmitted sound energy. (Q27a, S13; Cu, 7-52)

1660-Q. (German.) Behavior of Technical Titanium Alloys at Elevated Temperatures. K. Rudiger and H. H. Weigand. Metall, v. 15, Sept. 1961, p. 857-862.

Tensile testing at 400-650° C. and stress rupture testing at 400-450° C. of vacuum melted, cast and hot rolled specimens of Ti5Al2.5Sn, Ti8Al2Cb1Ta, Ti8Al8Zr1Cb/Ta, Ti2.7Cr1.5Fe, Ti2Cr2Fe2Mo, Ti5Al1.5Cr1.5Fe1.5Mo, Ti6Al4V and Ti7Al4Mo. (Q3q, Q27, 1-53; Ti-b)

1661-Q. (German.) Development, Production and Properties of Wear-Resistant Rails of Natural Hardness. Walter Janiche and Hedwig von Hye. Stahl und Eisen, v. 81, Sept. 14, 1961, p. 1253-1263.

Statistical investigation of chemical composition, mechanical properties including impact and fatigue strength and failure modes such as shatter cracks, flakes and chipping of steel rails containing 0.50-0.65% C, 0.15-0.50% Si and 1.3-1.7% Mn. Processing operations include adjustment and welding of rails. (Q-general, K-general, T23q, 1-53; ST)

1662-Q. The Influence of Nickel on the Properties of Sand-Cast Gunmetals. J. E. Stolarczyk. British Foundryman, v. 54, Sept. 1961, p. 377-382.

Effect of 0-3% Ni additions on the mechanical and physical properties of gun metal bars, plates, rods and disks, including grain structure, porosity, tensile strength, elongation, creep resistance and hot tearing. (Q-general, N3, P10m, 2-60, 9-71; Cu-b, Ni)

1663-Q. Ductility in Aluminum Casting Alloys. British Foundryman, v. 54, Sept. 1961, p. 410-416.

Mechanical properties, with attention to ultimate tensile strength, 0.1% proof stress, elongation and ductility, of Al sand and chill cast alloys, some specimens being precipitation and solution heat treated. Importance of ductility in producing castings requiring strength and rigidity. 11 ref. (Q23p, Q-general, 2-64; Al-b, 5-60, 5-66)

1664-Q. (Russian.) Shock Waves on Iron and Steel in Vacuum. A. G. Ivanov and S. A. Novikov. Zhurnal Eksperimental'noi i Teoreticheskoi Fiziki, v. 40, June 1961, p. 1880-1882.

Formation of smooth surface splinters on cylindrical specimens by explosive reaction. (Q6q, Q24j; Fe, ST)

1665-Q. (German.) Influence of Cold Working on Age-Hardening of AlCu 3 Alloy. Friedrich Erdmann-Jesnitzer and H. Wenzlaff. Bergakademie, v. 13, May 1961, p. 294-299.

Measurements of hardness, electrical conductivity and microstructure for homogenized (540° C.), quenched, cold rolled (10-60% deformation) and aged (100-540° C.) specimens. Results are given in a three-dimensional diagram: hardness versus aging temperature versus degree of deformation.

(Q29, P15g, M27, N7a, 2-65, 3-68; Al-b, Cu)

1666-Q. The Calculation of Structural Members Subject to Buckling. W. Kerkhofs. Acier Stahl Steel, v. 26, July-Aug. 1961, p. 345-355.

Buckling forces and stresses are calculated within both the elastic limit and plastic range for A-37 and A-52 steel beams of uniform and non-uniform cross sections. Beams are also calculated under stresses by compressive forces varying from one section to another. (Q28k, 1-54; ST, 4-57)

1667-Q. Friction and Lubrication. G. W. Rowe. Chartered Mechanical Engineer, v. 8, Sept. 1961, p. 414-421.

Methods of lubrication by air, liquids, solid-film lubricants, CCl_4, melted glass, graphite, boron nitride, CCl_2F_2 vapor and lamellar solids (MoS_2 and TiI_2) are investigated for metallic surfaces of carbon and stainless steels, for air bearings and for Pt and Ti bars. A new comprehensive theory of friction is advanced. (Q9p, 18-73; CN, SS, Pt, Ti)

1668-Q. (Translation.) Testing of Filamentary Crystals in Tension and Bending. E. M. Nadgornyi and A. V. Stepanov. Soviet Physics--Solid State, v. 3, Oct. 1961, p. 778-782. (Translation from Fizika Tverdogo Tela, v. 3, Apr. 1961.)

Specimens of fused quartz, Cu, Si, Zn, ZnS, KCl, NaCl and hydroquinone are tested over a range of load, temperature and deformation rates, in air and various other media. 5 ref. (Q27, 1-54; Cu, Si, Sn, Te, Zn, NM-a, NM-e)

1669-Q. Orientation Dependence of the Slip and Failure of Beryllium Single Crystals in Tension. R. I. Garber, I. A. Gindin and Yu. V. Shubin. Soviet Physics--Solid State, v. 3, Oct. 1, 1961, p. 832-837.

Study of mechanical properties and crystallographic elements of plasticity and failure at 20° C. with determination of critical shear, fracture stresses and relative elongation. Resultant data agree with rule of constancy of normal and shear stresses in brittle fractures. 14 ref. (Q-general, 3-72; Be, 14-61)

1670-Q. Some Metallographic Observations on the Fatigue of Aluminium Bicrystals. Gilbert Y. Chin and W. A. Backofen. Institute of Metals, Journal, v. 90, Sept. 1961, p. 13-16.

X-ray diffraction study of deformation in isoaxial symmetrical bicrystals of high purity fatigued in pure bending at three levels of constant deflection. Kink bands and critical-slip clusters found at high and intermediate deflections become the sites of intense crystallite formation with subsequent cracking along crystallite boundaries as the predominant factor in fracturing. Deformation at low deflection is characterized by the absence of kink bands, formation of a more diffuse crystallite pattern and appearance of "holes" along primary slip bands associated with cracking. 9 ref. (Q24c, Q26, M22g;Al)

1671-Q. Anomalous Hardness Changes on Recrystallization and Recovery of a Titanium-10% Molybdenum Alloy. T. H. Schofield and A. E. Bacon. Institute of Metals, Journal, v. 90, Sept. 1961, p. 31-32.

Macro and microhardness measurement and X-ray analysis of recrystallized and polygonized regions adjacent to Vickers pyramid hardness impressions made on specimens, followed by beta phase heating (925° C.) for 1/2 hr. with rapid quenching. Relation of higher hardness of recrystallized grains, as compared to polygonized fields, to dislocation annihilation and migration and to nucleation of alpha and omega phases at the sub-boundaries. (Q29c, Q29q, N-general, 1-54, 2-64, 3-71; Ti-b, Mo)

1672-Q. Plastic Flowing (Determination of Plane Strain Fracture Toughness). J. M. Kraft, A. M. Sullivan and R. W. Boyle. Report of NRL (Naval Research Laboratory) Progress, Sept. 1961, p. 33-34. (Available as PB 171322 from U. S. Office of Technical Services, Washington 25, D.C.) $1.25.

Strain energy parameters obtained from tests on centrally notched thin sheets of Al alloys are compared with the plane-strain toughness determined for circumferentially notched tensile rounds. A width effect is observed for the sheet specimens that is almost identical to the diameter effect for the rounds, indicating the applicability of strain energy parameter determinations on the smaller specimens as a substitute for tests

on the larger rounds and thick plates. (Q23r, Q24, Q26, 3-66, 3-73; Al-b)

1673-Q. Metals and Alloys at Elevated Temperatures. G. J. Danek, Jr., H. H. Smith and M. R. Achter. Report of NRL (Naval Research Laboratory) Progress, Sept. 1961, p. 39-40. (Available as PB 171322 from U. S. Office of Technical Services, Washington 25, D. C.) $1.25.

The effect of environment on the high-temperature fatigue properties of Ni, 316 stainless steel and Inconel X is investigated by comparing the fatigue life in air to that in vacuum at 1500° F. of sheet-metal specimens cycled in reverse bending at their resonant frequency. (Q7; Ni-b, SS, SGA-h)

1674-Q. Radiation Damage of Metals (Irradiation Studies in Army Nuclear Power Plant-SM1). L. E. Steele. Report of NRL (Naval Research Laboratory) Progress, Sept. 1961, p. 42-45. (Available as PB 171322 from U. S. Office of Technical Services, Washington 25, D. C.) $1.25.

Charpy V-notch and tensile specimens of eight steels, ASTM A^{212} Grade B, ASTM A^{302} Grade B, ASTM A^{350} Grade B LF-1 (modified), ASTM A^{350} Grade B LF-3, ASTM A^{353}, HY-80 and 304 and 347 stainless, are encapsulated in stainless steel holders under pressure and subjected to neutron bombardment in an operating nuclear reactor for 1-3 years for comparison with neutron-induced changes in properties with property changes occurring in research reactors. (Q6, Q27, P-general, 2-67; ST)

1675-Q. The Andrade Formulae. Pt. 2. S. A. Main. Iron & Steel, v. 34, Oct. 1, 1961, p. 465-470.

Application of the Andrade beta-kappa formula to highly alloyed heat-resisting steels, both ferritic and austenitic. Graphical analysis of creep rate and creep strain versus time. (Q3, 1-53, 3-67; SS, SGA-h)

1676-Q. Review of Recent Developments in the Evaluation of Special Metal Properties. J. E. Campbell. Defense Metals Information Center, Battelle Memorial Institute, DMIC Memo. 128, Sept. 27, 1961, 8 p.

Tests reviewed include the determination of the effects of varying oxygen contents in titanium alloys at temperatures of 78 to -423° F. on the tensile properties and the notched to unnotched strength ratio of the alloy in order to evaluate the alloy for use in liquid-hydrogen tankage; the effects of small cracks in reducing the strength of SAE 4340 steel, H-11 steel and Ti alloy specimens; and determination of H embrittlement in Cd-plated specimens. 7 ref. (Q26s, Q27, 2-60, 10-54; ST, Ti-b, Cd)

1677-Q. Effects of Changing Stress Amplitude on the Rate of Fatigue-Crack Propagation in Two Aluminum Alloys. C. Michael Hudson and Herbert F. Hardrath. NASA (National Aeronautics and Space Administration), TN D-160, Sept. 1961, 24 p.

Constant amplitude and two-step axial loading of 2024-T3 and 7075-T6 sheet. 7 ref. (Q7, Q26q; Al-b, 4-53)

1678-Q. Ball and Roller Bearings. Pt. 6. Power Transmission, v. 30, Sept. 1961, p. 526-529.

Study of bearing failure in terms of fatigue life, loading cycles and stress-strain relations, alignment, lubrication and moisture effects. (Q7, Q9, T7d, 1-54)

1679-Q. Bowing of Cryogenic Pipelines. W. G. Flieder, J. C. Loria and W. J. Smith. Journal of Applied Mechanics (ASME Transactions), Series E, v. 28, Sept. 1961, p. 409-416.

Bowing effects and thermal stresses are examined in stainless steel pipelines carrying cryogenic fluids to determine the effect of temperature distribution on bowing and the effect of bowing on support loads and pipe stress. 6 ref. (Q25p, T26r, 2-63; SS)

1680-Q. Plastic Stress-Strain Relationships--Further Experiments on the Effect of Loading History. J. Parker and J. Kettlewell. Journal of Applied Mechanics (ASME Transactions), Series E, v. 28, Sept. 1961, p. 439-446.

Thin closed-ended tubes of alpha brass (Cu 69.42%, Zn 30.56%, Fe 0.02%) are subjected to various combinations of torque and internal pressure. The effect of loading, unloading and reloading along different paths is investigated. The loading paths are based on a yield function which correlates initial radial loadings for brass, which possesses one degree of anisotropy. 7 ref. (Q23b, Q24h, 1-53; Cu-n)

1681-Q. High Strength Aluminum Alloy Airframe Castings. W. A. Bailey and E.

N. Bassing. Modern Castings, v. 40, Oct. 1961, p. 86-88.

Comparison of mechanical properties of 356, A356 and Tens-50 Al alloy castings to determine effects of composition, casting procedures and heat treatment. (Q-general, E-general, T24a, 2-60, 2-64; Al-b, 5)

1682-Q. Comparison Tests on Various Lubricants and Coatings on Steel. William P. Hayduk. Allen Aircraft Products Inc., Ravenna, Ohio, Engineering Report, no. 32061, 1961, 5 p.

Steel races, both coated (electrolized, lubrited, hard chrome plated and electrofilmed) and uncoated are life tested on a modified MacMillan tester both dry and lubricated (SAE 30 oil, MO_2 and graphite). (Q9p, T7d, 17-57; ST, 8-62, NM-h)

1683-Q. (French.) Cracking Susceptibility of Cast Steel. A. de Sy, J. van Eeghem and R. de Groote. Fonderie Belge, v. 31, July-Aug. 1961, p. 175-184.

Effect of varying amounts of C, P, S and Al on the cracking susceptibility of steel permanent mold and sand castings. Comparison of defects of the two types of castings by microscopic examination. (Q26, E11, E12; ST, C, P, S, Al)

1684-Q. (Italian.) Brittle Fracture. Alberto Nacher. Rivista Italiana della Saldatura, v. 13, July-Aug. 1961, p. 175-198.

Behavior of metallic specimens, crystals and welds subjected to nonfatigue testing in order to determine the start and propagation of brittle fracture as a function of crystal structure and notch geometry. Determination of resilience, yield point and transition temperature. (Q26s, Q23r, 1-54; 7-51, 14-61)

1685-Q. Determine Impact Properties of High Hardness Materials. Materials in Design Engineering, v. 54, Oct. 1961, p. 98-99.

Determination of the dynamic torsional properties of metals using a newly developed kinetic torsion tester. Application to a low-alloy steel containing 0.75% carbon. (Q1, Q6, 1-54; SGB-q)

1686-Q. (German.) Influence of Alloying Elements and Heat Treatment of Stress Rupture Strength of Ferritic Heat Resistant Steels. H. G. Brandt. Schweizer Archiv, v. 27, Aug. 1961, p. 344-351.

Stress rupture testing at 550-600° C. of notched and notchless specimens of alloyed steels of various Cr, Mo, V, Ta and Cb content including 21 CrMoV 5 11, 24 CrMoV 55 and X 22 CrMoV 121 steel after varying heat treatment operations such as hardening at 920-1100° C. and annealing at 600-750° C. (Q3q, 2-60, 2-64; SS-d, SGA-h)

1687-Q. (German.) Effect of Toughness on Lifetime and Fatigue Strength of Case-Hardened Parts. Hans Brugger and Gerhard Kraus. Archiv fur das Eisenhuttenwesen, v. 32, Sept. 1961, p. 627-635.

Fatigue testing of notched and notchless specimens and wear testing of gears of case-hardened 15 Cr Ni 6, 20 MnCr 5 and C 15 steel and of conventionally hardened 100 Cr 6 steel. Fatigue strength and lifetime as influenced by geometrical shape of specimen and steel toughness. (Q7a, Q9, 2-64, 3-73; ST)

1688-Q. Measurement of the Tensile Strength of Brittle Materials. A. Ormerod, R. Berenbaum and I. Brodie. British Journal of Applied Physics, v. 12, Jan. 1961, p. 29-30.

The sensitivity of the bending test to surface conditions is emphasized with acknowledgement of the fact that nonlinearity of the stress-strain relation plays a major part in the case of cast iron and other materials with similar stress-strain curves. (Q5g, 1-54)

1689-Q. Aluminum Alloy L^{65}. T. R. G. Williams, S. W. Hallwood and R. W. Hayden. Metal Industry, v. 99, Sept. 8, 1961, p. 182-185.

Mechanical properties of extruded alloy are investigated with reference to the effect of various preheat homogenization treatments. (Q-general, 2-64; Al-b)

1690-Q. How to Choose a Gunmetal. J. E. Stolarcyzk. Foundry Trade Journal, v. 111, Oct. 5, 1961, p. 407-411, 414.

Effects of structure, microporosity and composition on properties including tensile strength, ductility and elongation. Metallurgical control for common casting applications. 5 ref. (Q23p, Q27a, E25, 2-60, 2-71; Cu-b)

1691-Q. (German.) Hardness and Creep Measurements Under Pressure for Sintered Metal Alloys at Elevated Temperatures. Georg Altmeyer and Otto Jung. Zeitschrift fur Metallkunde, v. 52, Sept. 1961, p. 577-583.

Measurement of hardness at elevated temperatures (200-600° C.) and creep under uniaxial compression stressing at 500° C. for pure Co and tungsten carbide-Co alloys (6-25% Co), which were sintered under vacuum or hydrogen atmosphere at temperatures of 1330-1450° C. (Q3, Q29, 2-62, 3-66; 6-71)

1692-Q. (Czech.) Conchoidal Fracture of Superheated Steel. Jiri Elfmark and Otakar Sedenka. Hutnicke Listy, v. 16, Aug. 1961, p. 546-552.

Steel samples containing 0.14-0.66% C, 0.38-1.20% Mn, 0.21-1.48% Si, 0.017-0.045% S, 0.014-0.036% P, 0.1-1.16% Cr, 0.03-5.02% Ni, 0-58% W and 0-0.15% V are heated in a coke gas-fired furnace up to 1420° C., allowed to cool in air, with a part being subsequently heated up to 560-920° C. and allowed to cool, or heated and quenched from 830-890° C. and then annealed at 560° C. Effect of composition, superheating and subsequent heat treatment on conchoidal fracture and microstructure. 5 ref. (Q26, M27, 2-60, 2-64; ST)

1693-Q. Hydrogen Embrittlement of High Tensile Steels During Chemical and Electrochemical Processing. Pt. 2. L. E. Probert and J. J. Rollinson. Electroplating and Metal Finishing, v. 14, Oct. 1961, p. 356-360, 382.

Detection and effect of hydrogen-liberating process. Discussion of controlling factors including carbon content, ultimate tensile strength, contamination and pressure, hydrogen removal, stress embrittlement and de-embrittlement heat treatment. (Q26s, Q27a, J-general, 2-60; ST)

1694-Q. (Translation-AIP.) Plastic Deformation of Zinc Monocrystals Under Conditions Preventing Basal Slip. Pt. 2. Dislocation Distribution in Specimens, the Direction of Compression of Which Lies in the Basal Plane. A. A. Urosovskaya and V. M. Stepanova. Soviet Physics--Crystallography, v. 5, May-June 1961, p. 879-888.

Crystals are compressed along the basal plane at 20-300° C. and studied by selective etching and Laue back-reflection diffraction patterns to determine prismatic slip, etch figure distribution and longitudinal curvature. Crystallographic diagrams are given, showing compression directions and effective slip elements. 13 ref. (Q24c, Q28, M26b, 2-61; Zn)

1695-Q. Strength of Rim Reinforcements for Manholes in Welded Storage Tanks. R. T. Rose. British Welding Journal, v. 8, Oct. 1961, p. 491-501.

Determination of stress distribution and resistance to yield and fracture when using a tubular rim reinforcement. (Q23b, Q26, T26q)

1696-Q. (French.) New Magnesium Alloys and Their Applications. Maurice Hardouin. Technique Moderne, v. 53, July 1961, p. 49-52.

Tensile properties of castings, sheets and profiles of various Mg alloys containing 0-5.5% Zn, 0-0.7% Zr, 0-3% rare earths, 0-3% Th, 0-1.5% Mn and 0-2.5% Ag at temperatures from 20-350° C. Applications in aircraft. (Q27, 2-60, 2-61, T24; Mg-b, 17-57)

1697-Q. (French.) Failure of Carbon Steels and Low-Alloy Steels Under the Combined Effect of Mechanical Loads and Corrosion. Pt. 1. E. Herzog. Corrosion et Anticorrosion, v. 9, 1961, p. 260-269.

Specimens are creep tested in H_2SO_4 and other corrosive media with and without the use of electrical current to make the straight, notched or gradually section-reduced sample a cathode. Creep strength is measured as a function of composition, shape of sample, corrosive medium, current passage, temperature and surface characteristic. 6 ref. (Q3m, R1, R6, 2-60, 2-61, 2-66, 3-68, 3-73; CN, AY)

1698-Q. Deformation and Fracture. Metal Industry, v. 99, Oct. 6, 1961, p. 265-270.

A review of papers presented at the 53rd Autumn Meeting of the Institute of Metals, Brussels, Sept. 18-22, 1961. Topics include: An analysis of the deformation of Al-4.5% Cu alloy single crystals; hardness indentation pressure in Pb and In single crystals; phase transformations in Co and Co alloys; effects of stress on recovery and recrystallization in high purity Al and Cu; effects of

neutron irradiation on ductile-brittle transition in Mo; and effects of voids on creep rupture behavior of Ni. (Q-general, N-general, 2-67, 3-68, 3-71, 10-54; Al, Co, Cu, In, Mo, Ni)

1699-Q. (Japanese.) Studies on Titanium Alloys. Yutaka Kondo. Sumitomo Light Metal Technical Reports, v. 2, July 1961, p. 15-25.

Hot and cold workability, mechanical properties and heat treatment response are studied for alloys in the Ti-Al-Mn, Ti-Al-Cu and Ti-Mn-Cr to determine feasibility of wrought Ti alloys for use as sheet, bars and forgings. Data are given for Brinell and Vickers hardness, tensile properties, forgeability and machinability, response to shearing and rolling reduction, embrittlement, microstructure and time-temperature-transformation effects for annealed and quenched (200-800° C.) specimens as a function of temperature. 23 ref. (Q-general, F22, 17-52, G17k, 2-61, 2-64; Ti-b, Al, Mn, Cu)

1700-Q. (Japanese.) Effects of Intermetallic Compounds in Extruded Extra-Super Duralumin and 7075 Aluminum Alloys on Their Fatigue Strengths. Seikiti Hukai and Katsuzi Takeuchi. Sumitomo Light Metal Technical Reports, v. 2, July 1961, p. 26-35.

Ultrasonic pulse-echo technique and metallographic methods are used to examine micro and macrostructures and plain and rotating bending fatigue tests are used to determine effect of intermetallic compound and Mn content on fatigue strengthening of large extruded shapes. Correlation is made of the S-N curve with other mechanical properties including Brinell and Rockwell B hardness, yield and tensile strength, elongation, elastic limit, Charpy impact value, true breaking strength, modulus of elasticity and reduction of area. 5 ref. (Q7, Q-general, M26q, 2-60, 9-69; Al-b)

1701-Q. (Japanese.) Bulging-Drawing Combined Formability. Pt. 2. Koichi Yoshii. Sumitomo Light Metal Technical Reports, v. 2, July 1961, p. 53-60.

Heat treated specimens of 70-30 bronze, aluminum O alloy and aluminum 1/2 H subjected to Erichsen clipping, Fukui conical clip, Swift clip-forming and Fukui deep drawing tests using Al-killed steel as standard. Formability rating for bulging and deep drawing are determined as a function of punch profile and diameter, specimen size and strain hardening effects. (Q23q, 2-73; Al, Cu-s)

1702-Q. (Japanese.) Mechanical Properties of Aluminum Alloys at Low Temperatures. Katsuzi Takeuchi and Eiji Tanaka. Sumitomo Light Metals Technical Reports, v. 2, July 1961, p. 78-81.

Data are presented for properties of heat treated 5052, 5056 and 5083 Al-Mg at -200 to 50° C. (Q-general, 2-63; Al-b, Mg)

1703-Q. Which Type of Stress Analysis Method? Nelson A. Crites. Product Engineering, v. 32, Oct. 16, 1961, p. 90-96.

Applications and limitations of methods including brittle coatings, strain gages, photoelasticity, grid systems, X-ray diffraction, acousto-elastic devices and extensometers. (Q25, 1-54)

1704-Q. Review of Recent Developments in the Technology of High-Strength Stainless Steels. D. A. Roberts. Defense Metals Information Center, Battelle Memorial Institute, DMIC Memo. 131, Oct. 13, 1961, 3 p.

Mechanical properties are tabulated for AFC 77 stainless steel, a Ni-Co-Mo steel and a wrought Fe-Al-Mn-C alloy. Tensile testing on 17-7 PH and 12 MoV stainless steel sheet. 4 ref. (Q-general, 10-54; SS, SGB-a)

1705-Q. New Test Methods "Predict" Metal Failure. Richard Turner. Western Metalworking, v. 19, Oct. 1961, p. 36-38.

Eddy current, sonic and ultrasonic testing of Al alloy and steel bearing balls, transducer parts and aircraft and missile components for fatigue cracking, Rockwell hardness, tensile strength and shear modulus. (Q-general, P16s, S13, T7, T24; Al-b, ST, 17-57)

1706-Q. (English.) Rolling Friction on Single Crystals of Copper in the Plastic Range. L. D. Dyer. Acta Metallurgica, v. 9, Oct. 1961, p. 928-936.

Rolling friction and track width are found to vary with crystallographic direction when a sapphire ball is rolled in various directions on the cube face of a Cu

crystal. The topography of the deformed areas is studied by optical and interference microscopy with microhardness measurements made in and around the ends of the tracks to aid in developing an explanation for the observed anisotropies as a function of stress. A dislocation model is presented of plastic flow and workhardening. 16 ref. (Q9, Q-general, M26c, 3-66; Cu, 14-61)

1707-Q. (English.) Work-Softening of Metal Crystals by Alternating the Rate of Glide Strain. B. Langenecker. Acta Metallurgica, v. 9, Oct. 1961, p. 937-940.

Work-softening observed in Al and Zn crystals grown from the melt as a result of unloading after straining at a high rate of glide strain and subsequent loading at a low rate of glide strain at 76-296° K. with and without ultrasonic radiation. Resulting stress-strain curves are compared to those obtained by Cottrell and Stokes and by Blaha and Langenecker. 11 ref. (Q23, Q25, 2-61, 2-67, 3-68; Al, Zn, 14-61)

1708-Q. (English.) The Stored Energy in Deformed Copper: The Effect of Grain Size and Silver Content. R. O. Williams. Acta Metallurgica, v. 9, Oct. 1961, p. 949-957.

Measurements of the total energy of deformation of Cu which remains stored within the material as a function of 0.3 strain, grain size and Ag (0.1-1.0%) additions. There is a slight release of energy immediately following the deformation which appears proportional to the flow stress and is temperature sensitive, but is insensitive to grain size. 16 ref. (Q22n, Q23, Q24, 2-59, 2-60, 2-61, 3-68; Cu-b, Ag)

1709-Q. (English.) Temperature Dependence of the Flow Stress in Quenched Aluminum Crystals. H. K. Birnbaum. Acta Metallurgica, v. 9, Oct. 1961, p. 968-969.

Review of theory and analyses of the nature of dislocation barriers which contribute to the temperature dependent and independent portions of the flow stress in quench hardened and annealed Al single crystals at 77-293° K. 10 ref. (Q23, Q24, 2-61, 2-64; Al, 14-61)

1710-Q. (English.) Occurrence of Longitudinal Cleavage in Stretched Silicon Iron Crystals. R. Honda. Acta Metallurgica, v. 9, Oct. 1961, p. 969-970.

Effect of twinning and slip systems and their intersections on transverse and longitudinal cleavage fracture of 2.9% Si-Fe single crystals deformed in tension at 77° K. along specificied crystallographic axes. (Q26n, Q24, 3-68; Fe-b, Si, 14-61)

1711-Q. The Effect of Zinc Plating on Threaded Fasteners. W. M. Hanneman. Assembly & Fastener Engineering, v. 4, Nov. 1961, p. 47-48.

Torque, twist-tension and tension testing of unplated and 0.00005 in. Zn-plated bolts and nuts indicating tensile strength and elastic limit. (Q-general, T7f; 8-65, Zn, 17-57)

1712-Q. Advantages of the New XC-60 Pipe. A. G. Barkow. Pipe Line Industry, v. 15, Oct. 1961, p. 50-56.

Testing of arc welds and burst, underbead crack, notch and bend testing of steel pipe containing 0.26% maximum carbon, 1.30% maximum Mn and 0.05% maximum Cb provide data on ductility, yield and tensile strengths, elongation and weldability. (Q-general, K9s, T7n; ST, C, Mn, Cb, 17-57)

1713-Q. Metal Bellows Seals. R. W. Blair, D. L. Johnson and J. P. Morley. Lubrication Engineering, v. 17, Oct. 1961, p. 470-475.

Flexure fatigue and tensile testing of seals indicating spring rate variation in terms of temperature, mean diameter and thickness; modulus of elasticity; pressure limits; and amount of cracking. Hydraulic forming and welding of 316, 321, 347, 17-7PH and AM-350 stainless steels, phosphor bronze, beryllium copper, 6061 T-6 Al, Ti and Ni alloys to produce a corrosion resistant seal for use at high and low temperatures. (Q-general, G4, 1-70, K-general, R-general, 1-52, 2-61; SS, Al-b, Cu-b, Ni-b, Ti-b, 17-57)

1714-Q. Materials for Elevated Temperature Piston Ring and Seal Ring Applications (600-1200° F.) Glenn F. Hyde and John H. Fuchsluger. Lubrication Engineer, v. 17, Oct. 1961, p. 476-483.

Wear and oxidation testing indicating weight loss, wear rating and coefficient of friction for carbons, carbides, nitrides, borides, intermetallics, ceramics, cermets, irons, steels, high-temperature alloys and hard facing alloys

with and without surface treatments or coatings such as carbide, oxide and soft and hard metal. (Q9n, T7, 1-53, 17-57, R1h, 2-62, 2-64)

1715-Q. A Study of the Torque Characteristics of Grease Packed R-2 and R-3 Ball Bearings. John C. Lawrence. Lubrication Engineer, v. 17, Oct. 1961, p. 484-487.

Effect of grease content and amount, thrust load and separator configuration on bearing torque characteristics determined at 1-2 and 15,000 rpm. for metal and rubber beaded shields. (Q1, T7d, 1-53; NM-h)

1716-Q. (French.) New Steel Used in Steam Superheaters. M. Caubo and L. Gottignes. Revue de Metallurgie, v. 58, Aug. 1961, p. 637-654.

Samples containing 0.08-0.12% C, 0.2-0.4% Si, 0.9-1.2% Mn, 9-10% Cr, 1.5-2% Mo, 0.4-0.6% Cb, 0.20-0.30% V and 1.8-2.2% Co are austenitized at 1100° C. for 2 hr., cooled at a velocity of 50° C. per min. and subsequently heated and held at 750° C. for 8 hr. Data are given for room temperature tensile properties, corrosion in steam and smoke, microstructure, forgeability and weldability and creep strength at 575-625° C. 14 ref. (Q-general, R-general, W11; ST, 17-57)

1717-Q. The Effects of Interstitial Solute Atoms on the Fatigue Limit Behavior of Titanium. Harry A. Lipsitt and Douglas Y. Wang. Metallurgical Society of AIME, Transactions, v. 221, Oct. 1961, p. 918-923.

A fatigue study in completely reversed axial tension-compression is performed on high-purity Ti and on three high-purity Ti alloys containing approximately 0.75% of a single interstitial element, C, N or O. The results corroborate a previously published theory proposing that strain aging under alternating stress is responsible for the fatigue limit behavior of certain alloys. 20 ref. (Q7b, N7e, 2-60, 3-69; Ti-b)

1718-Q. Determination of the Glide Elements and Recrystallization in InSb. M. S. Abrahams and G. W. Neighbor. Metallurgical Society of AIME, Transactions, v. 221, Oct. 1961, p. 947-951.

The active slip plane in InSb is found to be of the (111) type by the method of two-trace analysis. Measurements of the rotation of the tensile axis as a function of increasing plastic shear strain are used to determine macroscopic slip direction, recrystallization and dislocation density. 8 ref. (Q24a, M26, N5, 3-68; In-b, Sb-b, 14-67)

1719-Q. The Effect of Surface-Active Agents on the Mechanical Behavior of Aluminum Single Crystals. I. R. Kramer. Metallurgical Society of AIME, Transactions, v. 221, Oct. 1961, p. 989-993.

Single crystals of Al are pulled in tension in a solution of paraffin oil and stearic acid with determination of the critical resolved shear stress, creep, stress-strain relation and plastic flow properties. The weakening effect of surface-active agents is attributed to the rate of desorption of the metal soap formed by the reaction of the surface-active agent and the metal surface. 21 ref. (Q-general, P13d, 2-66; Al-a, 14-61)

1720-Q. The Effects of Deformation at 78° K. on the Alloy Cu_3Au. Barton Roessler and Michael B. Bever. Metallurgical Society of AIME, Transactions, v. 221, Oct. 1961, p. 1049-1055.

The effects of deformation by wire drawing at 78° K. on initially ordered and initially disordered specimens are investigated. The resistivity, stored energy, drawing force and microhardness are measured as functions of strain with microstructural changes observed and the results interpreted in terms of the structural imperfections and the changes in atomic configuration resulting from deformation. The effects of room-temperature annealing after deformation at 78° K. are studied and suggest vacancy promoted ordering in disordered alloys. 19 ref. (Q-general, M27, N10, P15g, 2-63, 3-68; Cu-b, Au, 14-68)

1721-Q. The Creep Behavior of Heat Treatable Magnesium Base Alloys for Fuel Element Components. P. Greenfield, C. C. Smith and A. M. Taylor. Metallurgical Society of AIME, Transactions, v. 221, Oct. 1961, p. 1065-1073.

The Mg-Zr alloy, ZA, and Mg-Mn alloy, AM503(S), are shown to have a markedly improved resistance to creep deformation after suitable heat treatments. This improvement makes

them suitable for certain stress-bearing fuel element components in nuclear reactors. The extent of strengthening is described and an explanation of the behavior of both materials is given, based on a combination of strain aging and grain growth. 10 ref. (Q3, N3, N7e, T11g, 2-64; Mg-b, Zr, Mn, 17-57)

1722-Q. Tensile Properties of Hot-Worked Pyrolytic Graphite. W. V. Kotlensky and H. E. Martens. Metallurgical Society of AIME, Transactions, v. 221, Oct. 1961, p. 1085-1086.

Polycrystalline specimens are hot worked at 2750° C. with subsequent tensile testing at 20-2000° C. and X-ray diffraction examination of structures. Data are given for ultimate strength, elongation and stress-strain relations. Dissappearance during testing of a growth cone structure, noted in the microstructure after deformation, is related to strength changes. (Q27, 2-62, 3-68; NM-k36)

1723-Q. The Effect of Cyclic Loading on MgO Single Crystals. A. J. McEvily, Jr., and E. S. Machlin. Metallurgical Society of AIME, Transactions, v. 221, Oct. 1961, p. 1086-1087.

Axial load and unidirectional bend tests on as-cleaved specimens after heat treatment with comparison of yielding and failure behavior to chemically polished specimens. Embrittlement is noted in the as-cleaved specimen with much lower values of yield strength. All specimens fracture by static failure rather than fatigue failure which is attributed to absence of easy cross slip. 6 ref. (Q24, Q26; Mg-b, 14-61, 14-68)

1724-Q. The Influence of Bunton Configuration on the Stress Distribution in and Strength of Buntons. R. S. Loubser and J. R. M. Bull. South African Mechanical Engineer, v. 11, Aug. 1961, p. 13-25.

A theoretical analysis of the defection and the bending moment distribution in a bunton layout in terms of the applied load and the bunton configuration. The properties of end plate welded to diamond-shaped streamlined buntons are established by static and fatigue tests. (Q7, Q25, 3-68, W28h)

1725-Q. A Method for Strengthening Semi-Austenitic Stainless Steels. D. C. Ludwigson. Metal Progress, v. 80, Nov. 1961, p. 78-81.

Both the formability and strength of a semi-austenitic stainless steel can be improved to a degree by mild deformation followed by a stabilizing heat treatment. (Q27, Q23q, J-general; SS)

1726-Q. Malleable Irons. . .Versatile Engineering Materials. Hans J. Heine. Metal Progress, v. 80, Nov. 1961, p. 94-96.

The foundery industry has made significant progress in advancing the technology of malleable irons. More is known about machinability and recent studies confirm excellent stress-rupture properties of these materials to at least 800° F. (Q-general, G17k; CI-s)

1727-Q. A Metal for Service at Both Cryogenic and Ultrahigh Temperatures. H. R. Ogden and I. Perlmutter. Metal Progress, v. 80, Nov. 1961, p. 97-99.

Ta alloys may be useful for parts requiring a combination of toughness at cryogenic temperatures with strength at high temperatures. (Q-general, 2-61; Ta-b, 17-57)

1728-Q. Stainless Steels for High-Strength Welded Structures and Components. Metal Progress, v. 80, Nov. 1961, p. 100-105, 118-121.

Stainless steels, including the more recent precipitation-hardening grades, have become important engineering materials for welded structures due to corrosion resistance and wide range of mechanical properties. (Q-general, K-general, R-general; SS, 17-57)

1729-Q. Testing Steels for Low Temperature Use. Digest of "Welded Ferritic Steel Construction for Intermediate Low-Temperature Service". A. S. T. M. Preprint 80C. A. A. Wells. Metal Progress, v. 80, Nov. 1961, p. 172, 174, 176.

For rating steel to be used in low temperature applications, the notched and welded wide plate tension test gives the most comprehensive results. Minimum values of 35 ft-lb. and 30% fibrous fracture are suggested as specifications for steels in as-welded structures. (Q27,1-53, 2-63; ST, 7-51)

1730-Q. Treating Semikilled Steels With Columbium. Digest of "Columbium-Treated Mild Carbon, Semikilled Steels". Paper presented at the A. I. S. I. Regional Technical Meeting, Buffalo, N. Y., 1960. C. L. Altenburger. Metal Progress, v. 80, Nov. 1961, p. 177-178.

Cb, in amounts up to 0.03%, increases the yield and tensile strengths of plate made of low-carbon semikilled steels. Formability and weldability of the steel are adequate for fabrication. (Q23, Q27a, K9s, 2-60; ST, 4-53)

1731-Q. How Alloys Affect Hot Cracking of Stainless Steels. Digest of "Effects of Alloying Additions on Hot Cracking of Austenitic Chromium-Nickel Stainless Steels". Paper (Preprint 78) presented at the A. S. T. M. annual meeting, June 1960. Frederick C. Hull. Metal Progress, v. 80, Nov. 1961, p. 192.

According to tests, W and Mn reduce hot cracking tendencies, while Si and Ti increase them. (Q26q, 2-60; SS, Mn, Si, Ti, W)

1732-Q. Experimental Investigation at Mach Number 3.0 of the Effects of Thermal Stress and Buckling on the Flutter of Four-Bay Aluminum Alloy Panels With Length-Width Ratios of 10. S. C. Dixon, G. E. Griffith and H. L. Bohon. NASA (National Aeronautics and Space Administration) Technical Note D-921, Oct. 1961, 28 p.

The effect of thermal stress and buckling on skin stiffener panels with various holding geometries is determined at dynamic pressures of 1500-5000 psf. and 300-655° F. 9 ref. (Q25p, Q3c, T24a, 2-61, 3-74; Al-b, 17-57)

1733-Q. Heat of Preferential Adsorption of Surfactants on Porous Solids and Its Relation to Wear of Sliding Steel Surfaces. A. J. Groszek. American Society of Lubricating Engineers, Preprint no. 61 LC-9, 1961, 9 p.

Determination of the heats of preferential adsorption of various wear reducing agents on silica gel, alumina, Fe and activated C surfaces covered with n-heptane or benzene. Examination of heat effect in relation to the wear produced by lubricants under different loads and correlation of the wear reduction of sliding steel surfaces and the heat of preferential adsorption with regard to different lubricants. (Q9, P13d, 18-73; ST)

1734-Q. A Unified Engineering Theory of High Stress Level Fatigue. Sitaram Rao Valluri. Aerospace Engineering, v. 20, Oct. 1961, p. 18-19, 68-69, 71-75, 77-89.

An analytical theory of fatigue for high stress levels is formulated based on a simple model derived from a synthesis of the macroscopic elasto-plastic fracture theory and concepts derived from the dislocation theory of metals. The theory predicts the shape of the stress versus number of cycles curve in fatigue; makes quantitative predictions regarding the residual static strength, changes resulting from changes of stress ratio and cumulative damage due either to multiple step or to random loading; and gives a quantitative theory of acoustic fatigue. 37 ref. (Q7, Q26, Q25, M26b, 3-66, 3-68)

1735-Q. A Direct Radioisotope Method of Investigating the Wear of Wire Drawing Dies. J. Kieszniewski, Likus J. Siewierski and R. Wusatowski. Wire Industry, v. 28, Oct. 1961, p. 991-993.

Comparative testing of mechanical and physical properties of wires made of C steel, D45A, D85A steel and of irradiated sintered carbide drawing dies. Test results show that the effect of drawing speed on die wear is influenced by coating and lubricant. Drawing, patenting, pickling, lime and phosphate coating. (Q9, Q-general, 1-59, T6r, 17-52; ST, 4-61, 6-69, 17-57)

1736-Q. (German.) Quality Assessment of Soft Copper Wire for Windings in Electrical Engineering. Otto Lissner. ASEA Research, no. 6, 1961, p. 93-118.

Comparative testing of soft annealed cold drawn Cu wire by the "coil stretching test" and by conventional mechanical testing techniques with correlation of data for quality assessment. (Q-general; Cu, 4-61)

1737-Q. (German.) Assay on Mechanical Properties of Compound Materials. W. Hofmann and G. Hillmann. Dechema Monographien, v. 39, no. 600-615, 1961, p. 89-98.

Mechanical properties such as bending strength, stress distribution on bending, deformation and surface cracking upon thermal stressing of composite materials including wood steel, austenitic-steel plated ferritic-steel sheet and Pb-plated steel sheet. 9 ref. (Q-general; ST, 8, NM, 7-59)

1738-Q. New Test Data on Aluminum Screw Strength. W. J. Dewalt. Product Engineering, v. 32, Nov. 13, 1961, p. 99-104.

Data on breaking torque values of Al alloy, brass and stainless steel bolts; recommended drill sizes for wood screws; tensile properties of 2024 T4 bolts and stock; hole sizes for 2024 T4 sheetmetal screws; relationship between tension and torque clamping load capacities; shear strength of Al alloys. Effect of lubrication on torque. 6 ref. (Q27, Q1, Q2g, T7f; Al-b, Cu-n, SS)

1739-Q. Refractory Metal Structural Development Program. Fansteel Metallurgy, Oct. 1961, p. 1, 6.

A General Electric F-48 alloy (Cb-15% W-5% Mo-1% Zr) and Fansteel 82 metal (Cb-33% Ta-. 7% Zr) full-scale fin-rudder is spray-dip coated with Al-Cr-Si for protection against oxidation and tested under simulated re-entry conditions. Determination of specimen deflections and load distribution at temperatures from 400-2350° F. (Q24, R1h, 2-62, T24e; Cb-b, W, Mo, Zr, Ta)

SECTION R

CORROSION

1-R. Developmental V-Cb Alloys Have Excellent Corrosion Resistance. S. T. Wlodek. Materials in Design Engineering, v. 52, Nov. 1960, p. 14-15.

Corrosion and oxidation resistance, mechanical properties and strength-to-weight ratio of V-Cb alloys at 1290 and 1830° F. (R-general, Q-general, 1-66; V-b, Cb)

2-R. (French.) Passivation of 18-8 Stainless Steels With Special Reference to Steels Containing Molybdenum. Phillippe Berge. Memoires Scientifiques de la Revue de Metallurgie, v. 57, Sept. 1960, p. 699-704.

Potentials and passivation in 18N H_2SO_4 are measured for a current density of 5×10^{-6} amp. per sq. cm. at a temperature of 18° C., with reference to an electrode formed by a saturated Hg_2SO_4 solution. It is found that the presence of dissolved oxygen does not affect the process of passivation. 19 ref. (R10c; SS, Mo)

3-R. (French.) Study of the Tensile Factor in the Anodic Peroxidizement of Lead. Pt. 1. A. Coustenoble. Metaux, Corrosion, Industries, v. 35, Sept. 1960, p. 309-316.

Rupture testing of Pb frames in positive plates of storage batteries. Behavior of Pb under mechanical stress; corrosion of plates in sulphuric acid in presence and absence of electrical current; process of corrosion fatigue in metals in general and in some Pb alloys. (R1e, Q3q, 3-66; Pb-b, 4-53)

4-R. Oxidation of Zirconium-Columbium Alloys in Oxygen at 525-1090° C. Otto Zmeskal and Mary L. Brey. American Society for Metals, Transactions, Preprint no. 207, v. 53, 1961, p. 415-431.

Alloys of high-purity Zr and Cb are heated in oxygen at pressures lower than atmospheric and temperatures ranging from 525-1090° C. Rates of oxidation at constant pressure and temperature are measured by a volumetric procedure for periods of 2-6 hr. X-ray diffraction patterns are made of the free oxides. 11 ref. (R1h; Zr-b, Cb)

5-R. Preferential Corrosion of Stabilized Stainless Steel Welds. C. L. Angerman and P. M. Kranzlein. American Society for Metals, Transactions, Preprint no. 208, v. 53, 1961, p. 433-446.

Electron metallography of weldments of types 309SCb, 347 and 321 stainless steels after short-term corrosion in a 3. OM HNO_3-0. 075M HF solution and in 65% HNO_3 revealed that the attack occurred by preferential dissolution of Cb or Ti carbide particles located along the dendrite boundaries in the weld. This mechanism was in contrast to the attack of grain boundaries adjacent to chromium carbide particles in sensitized 304 steel. 15 ref. (R2h; SS, 7-51)

6-R. Effects of Alloying on the Oxidation Behavior of Tantalum. W. D. Klopp, D. J. Maykuth and R. I. Jaffee. American Society for Metals, Transactions, Preprint no. 221, v. 53, 1961, p. 637-652.

Studies were conducted on the air-oxidation behavior of Ta binary and ternary alloys at 1000-1400° C. Additions of the Group IV A metals, Ti, Zr and Hf, were most effective in reducing the oxidation rate. The effects of alloying on oxidation behavior can be correlated qualitatively with ionic size and oxide properties of the alloy additions. (R1h, 2-60; Ta)

7-R. Rapid Intergranular Oxidation of 18-8 Stainless Steels by Oxygen and Dry Sodium Chloride at Elevated Temperatures. H. W. Pickering, F. H. Beck and M. G. Fontana. American Society for Metals, Transactions, Preprint no. 232, v. 53, 1961, p. 793-803.

Mechanism is based on the formation of a nonprotective Na_2CrO_4 containing scale from the reaction of NaCl and O_2 with Cr_2O_3, Cr and $Cr_{23}C_6$. The reaction rates involving Cr_2O_3, Cr and $Cr_{23}C_6$ increase in order as listed, the $Cr_{23}C_6$ reaction occurring very rapidly. 4 ref. (R2h, 2-62; SS)

8-R. (French.) Application of a New Electrochemical Technique to the Investigation of the Inhibition of Amines of the Corrosion of Iron. M. Cappelaere and G. Montel. Comptes Rendus, v. 251, Aug. 22, 1960, p. 1007-1009.

Measurement of Fe-Cu and Fe-Zn cells determining activity of local anodes and cathodes formed at surface of Fe electrode in contact with corrosive solution. Effect of solution pH and amine concentration on the anodic inhibition of corrosion. (R10b, 2-66; Fe, Cu, Zn)

9-R. Can Enamels and Ceramic Coats Curb Corrosive Attack? G. L. Geltman. Iron Age, v. 186, Nov. 17, 1960, p. 148-150.

Resistance of coated and uncoated carbon and alloy steels to scaling and embrittlement above 1000° F. Effect of coating on the acid resistance of Ni alloys and steels. (R2q, R2h, 2-62; AY, CN, Ni-b, 8-71)

10-R. The Propagation of Corrosion Pits in Metals. C. Edeleanu. Institute of Metals, Journal, v. 89, Nov. 1960, p. 90-94.

Sample 99.999% Al foil in 3% NaCl solution is examined microscopically to determine the anodic reaction rate on the active portion of a pit during pitting corrosion. 7 ref. (R2j, M21; Al-a, 4-56)

11-R. Selective Corrosion of Inconel. R. Bakish and F. Kern. Corrosion, v. 16, Nov. 1960, p. 89-90.

Sheets, rod and tube samples were tested in the as-received condition by complete immersion in a fused salt bath. Tests were carried out at 800° C. for test times up to 50 days. A layer of porous sponge-like material formed on the surface. Cr and Fe were preferentially leached out of these layers. 4 ref. (R2h; Ni-b)

12-R. Corrosion Problems in the Use of Dense Salt Solutions as Packer Fluids. C. M. Hudgins, J. E. Landers and W. D. Greathouse. Corrosion, v. 16, Nov. 1960, p. 91-94.

Salts considered were $NaNO_3$, $CaCl_2$, $Ca(NO_3)_2$, $ZnCl_2$, $NaNO_3$-$CaCl_2$, $Ca(NO_3)_2$-$CaCl_2$ and $CaCl_2$-$ZnCl_2$. Only slight corrosivities were noted for the first three solutions. However, stress corrosion cracking was encountered in $NaNO_3$ solutions and in some mixtures of $NaNO_3$ and $CaCl_2$. 6 ref. (R6g)

13-R. Stress-Corrosion Cracking of High Strength Oil Country Tubular Goods. R. S. Ladley. Corrosion, v. 16, Nov. 1960, p. 95-98.

Failure experience with N-80, 9% Ni, 9% Cr and AISI 4340 tubing and N-80 casing. 5 ref. (R1d; AY, 4-60)

14-R. New Developments in the Mitigation of Corrosion in the Utility Field. E. H. Thalmann. Corrosion, v. 16, Nov. 1960, p. 99-108.

Use of distributed high Si cast iron anodes for corrosion protection of an underground Pb-covered cable distribution system. Use of well-type ground beds for cathodic protection of buried metallic structures at generating stations; methods of protection of Si rectifiers from damage because of surges. (R10d)

15-R. Cracking of Low Carbon Steel by Ferric Chloride Solutions. Mary Boehm Strauss and M. C. Bloom. Corrosion, v. 16, Nov. 1960, p. 109-112.

Aqueous corrosion of mild steel at 316° C. is greatly accelerated by low concentrations of $FeCl_3$. This can lead to stress corrosion cracking in plastically deformed areas subject to high stress. Analogous results can be obtained with chloride-bearing slurries of the ferric oxides and hydrated oxides gamma-FeOOH, alpha-FeOOH, gamma-Fe_2O_3 and alpha-Fe_2O_3 or from slurries of these compounds in contact with chloride-bearing solutions. (R1d; CN-g)

16-R. Stress Corrosion Cracking of Carbon Steels in Concentrated Sodium

Nitrate Solutions. R. L. McGlasson, W. D. Greathouse and C. M. Hudgins. Corrosion, v. 16, Nov. 1960, p. 113-117.

When locally stressed above the yield point, carbon steels (N-80 and J-55) failed in 150-230° F. concentrated solutions of $NaNO_3$. Mixed concentrated solutions of sodium nitrate and calcium chloride did not produce cracking in either normalized or quenched and tempered N-80 ranging in hardness from Rc 15-Rc 36. 9 ref. (R1d; CN)

17-R. Corrosion of Nuclear Power Plant Tube Materials by Boiler Sludge. E. Howells, T. A. McNary and D. E. White. Corrosion, v. 16, Nov. 1960, p. 127-133.

Inconel is the material most resistant to the test environment with little corrosion effect in evidence. 347-stainless steel is next with surface etching and some random pitting up to 2 1/2 mils deep. Croloy 16-1 is superior to Monel and carbon steel and rated below 347 stainless because it suffered more general pitting up to 2 1/2 mils deep. Monel is still more severely corroded with preferential attack up to 11 mils deep occurring at crevice opening. Carbon steel suffers the deepest attack on all surfaces. (R4c; Ni-b, SS, CN)

18-R. High Temperature Furnace Corrosion of Type 309 Alloy Steel. R. C. Merrick. Corrosion, v. 16, Nov. 1960, p. 134-136.

Severe corrosion occurs on the external surface of tubes and tube supports of 25 Cr-12 Ni alloy steel in a furnace operating at metal temperatures from 1600-2100° F. Corrosion to a depth of 1/2 in. occurs in 6 weeks time. Investigation reveals that the metal loss of furnace parts is accelerated by contaminants fluxing the hot metal surfaces. (R7; SS)

19-R. Factors Governing the Corrosion Testing of Zircaloy-Base Fuel Alloys. S. Kass and R. F. Gessner. Corrosion, v. 16, Nov. 1960, p. 137-141.

High temperature water and steam corrosion behavior of a Zircaloy-2 alloy containing 6.3 wt.% uranium. Corrosion is found not to be influenced by sample size, marking methods or precorrosion exposure surface condition. Corrosion resistance is markedly influenced by heat treatment, with the low temperature heat treatment resulting in less corrosion than the high temperature treatment. 7 ref. (R4a, R4d; Zr-b)

20-R. (Italian.) Behavior of Bronzes for Pump Bodies and Centrifugal Propellers in Corrosive Media. Angelo Azzolini. Fonderia Italiana, v. 9, Sept. 1960, p. 345-360.

Oxidation, corrosion by impact of swiftly moving waters and by microorganisms, pitting and intergranular corrosion in bronze pump components, data for corrosion and general service behavior of components composed of Cu-Ni, Cu-Zn, Cu-Sn, Cu-Si, Be and Al bronzes and Ni-Cu Monel-type alloys. 11 ref. (R-general, W13d; Cu-s, 17-57)

21-R. The Tarnish Resistance of Gold Plating Over Silver. William B. Harding. Plating, v. 47, Oct. 1960, p. 1141-1145.

Accelerated exposure testing to determine the tarnish rate of Au plating over Ag plating. Effect of thickness and porosity of the Au plating on tarnish resistance. (R2r; Ag, Au)

22-R. (English.) A Note on the Paper of A. Mituya and T. Obayashi "On the Deterioration of Platinum Anodes in Acid Solutions". A. N. Frumkin. Hokkaido University, Research Institute for Catalysis, Journal, v. 8, July 1960, p. 10-11.

Measurement of the hydrogen over voltage in 0.1N HCl on Hg at very low current densities allowing for the dissolution of the Pt anode when placed too close to the Hg surface. 5 ref. (R10d; Pt, 17-57)

23-R. Union Carbide Stops Condenser Failures With Bimetallic Tube. William Ashbaugh. Chemical Processing, v. 23, Oct. 1960, p. 52-53.

Bimetallic tubes consisting of a Cu shell over stainless steel pipe are used in heat exchangers to prevent corrosion cracking. (R-general, W13b; Cu, SS, 4-60, 17-57)

24-R. Inhibition of Metallic Corrosion in Aerosols. K. Klausner. American Perfumer, v. 75, Oct. 1960, p. 53-56.

Inhibition of corrosion in metallic aerosol containers by induced polarization of the electrochemical cell. Mechanisms of corrosion and corrosion

protection by various types of inhibitors. (R10b)

25-R. Corrosion--Cathodic Protection Cost Is Fully Justified. Pipe Line News, v. 32, Oct. 1960, p. 70, 72.

Use of Mg anodes or a rectifier system for cathodic protection of steel pipelines from galvanic corrosion. (R10d, R1a, T26r; ST)

26-R. (German.) Tarnishing of Silver, Copper and Copper-Zinc Alloys in the Presence of Cardboard and Paper. G. Schikott and K. Volz. Metall, v. 14, Nov. 1960, p. 1073-1076.

Samples at 18-70° C. are allowed to tarnish in the presence of cardboard containing elementary sulphur. Effect of time and air humidity on tarnishing rate. 10 ref. (R2r, 2-61; Ag-b, Cu-b, Zn-b)

27-R. (German.) Stress Corrosion of Alpha-Brass. K. V. Kamath and F. Erdmann-Jesnitzer. Metall, v. 14, Nov. 1960, p. 1061-1072.

Samples containing 6.1-35.2% Zn are homogenized at 600° C. and cold rolled with 30-90% deformation. Effects of holding time and temperature and of Al, Cr, Sn and Si additions on stress corrosion. 60 ref. (R1d, 2-60, 2-64; Cu-n)

28-R. Cathodic Protection Used to Control Corrosion of Service Station Underground Equipment. M. J. Olive. Corrosion, v. 16, Oct. 1960, p. 9-10, 12, 14-15.

Effect of soil resistivity and ground bed resistance on the corrosion of pipelines and tanks. Use of a cathodic protection system with Mg, Zn or Al sacrificial anodes and of rectifiers and graphite ground beds for protection of underground equipment. 17 ref. (R10, T26r, T26q)

29-R. Corrosion by Urban Cooling Waters. Sidney Sussman. Corrosion, v. 16, Oct. 1960, p. 471t-472t.

Effect of cooling water composition on the corrosion of mild steel coupons in cooling towers and untreated evaporative cooling units. (R4; CN)

30-R. Cooling Water Inhibitor Performance. P. R. Puckorius and W. J. Ryzner. Corrosion, v. 16, Oct. 1960, p. 473t-4785.

Use of polyphosphate and chromate-based inhibitors to provide a protective film for open recirculating water systems. SAE 1010 mild steel coupons are used in laboratory tests. 4 ref. (R10b; CN)

31-R. Cathodic Protection of Water Treatment Plants. F. O. Waters. Corrosion, v. 16, Oct. 1960, p. 487t-490t.

Cathodic protection of moving drives and chains in the chemical mixing and settling basins of a rapid sand water treatment plant by graphite anodes. (R10d, W10h)

32-R. Zinc as a Self-Regulating Galvanic Anode for Ship Hulls. J. A. H. Carson. Corrosion, v. 16, Oct. 1960, p. 491t-496t.

High-purity Zn anodes containing trace amounts of Al and Cd used to control corrosion of steel ship hulls by adjusting current output automatically and stopping current flow before the potential of the hull reaches the H_2 evolution level. Current distribution depends on anode shape, arrangement and location. 16 ref. (R10d, T22g, W3h; Zn, 17-57)

33-R. Chromium Electroplates for Corrosion Protection of Stressed AISI 410 Steel in High Temperature, High Purity Water. Henry Suss. Corrosion, v. 16, Oct. 1960, p. 497t-502t.

410 steel is tempered at 650 and 1125° F. and plated with Cr to a thickness of 0.003-0.005 in. Susceptibility to stress corrosion cracking is measured in oxygenated H_2O at 300° F. (R1d, R4, L17; SS, Cr)

34-R. Corrosion Problems in a Refinery Diethanolamine System. Kenneth L. Moore. Corrosion, v. 16, Oct. 1960, p. 503t-506t.

Corrosion of a stainless and carbon steel piping in a large diethanolamine system for removal of H_2S from refinery gas and liquid propane streams. (R7, T29n; CN, SS)

35-R. Compatibility of Materials With Unsymmetrical Dimethylhydrazine Rocket Fuel. C. W. Raleigh and P. F. Derr. Corrosion, v. 16, Oct. 1960, p. 507t-510t.

Compatibility of Al, Ti and Ni alloys, mild and stainless steels, plastics and elastomers with UDMH rocket fuel. (R7d; Al-b, Ni-b, Ti-b, CN, SS, NM-d)

36-R. Corrosion of Metals in Tropical Environments. C. R. Southwell, B. W.

Forgeson and A. L. Alexander. Corrosion, v. 16, Oct. 1960, p. 512t-518t.

Corrosion of wrought iron, carbon steel and structural steels in fresh and sea waters and inland tropical atmospheres. Corrosion of metallic couples of wrought iron and carbon steel. (R1a, R3, R4; Fe-m, CN, ST, SGB-s)

37-R. Laboratory Investigation of Water-Side Scale and Corrosion in the Presence of High Process-Side Temperatures. Herman Kerst. Corrosion, v. 16, Oct. 1960, p. 523t-529t.

Corrosion tests on seamless steel tubing in a circulating water system and on miniature heat exchangers to determine corrosion attack and $CaPO_4$ scale deposition rates at 130° F. water temperature and 350-395° F. hot side temperatures. (R4, R11, 2-61, W13b; ST, 4-60)

38-R. Use of Alloy Additions to Prevent Intergranular Stress Corrosion Cracking in Aluminum Bronze. J. F. Klement, R. E. Maersch and P. A. Tully. Corrosion, v. 16, Oct. 1960, p. 519t-522t.

Addition of Be, Se, Si, As, Cr, Ni, Ag, Sb, Ti and Sn to different batches of Al bronze to reduce concentration of segregated Al atoms at grain boundaries and prevent intergranular stress corrosion cracking. Cold rolled strips are tested at stresses of 30,000 psi. in 350° F. saturated steam from 160-3000 hr. 12 ref. (R1d, R2h, M27; Cu-s, Al, AD-n)

39-R. A Contribution to the Explanation of Intergranular Corrosion of Chromium-Nickel Steel. U. Cihal and M. Prazak. Corrosion, v. 16, Oct. 1960, p. 530t-532t.

Effect of boiling H_2SO_4 containing $CuSO_4$ on the intercrystalline corrosion susceptibility of heat treated Invar alloy, 18 Cr-9 Ni alloy and stainless steel. (R2h, R6g, 2-64; Ni-b, Cr-b, SS)

40-R. Anhydrous Ammonia Can Halt Internal Casing Corrosion. R. C. Loncaric, D. R. Anthony, M. D. Folzenlogen and Fair Calvin. Oil and Gas Journal, v. 58, Oct. 24, 1960, p. 117-121.

Description of an injection truck for anhydrous ammonia having three main sections: an ammonia reservoir and pump intake system, a glycol-storage tank and nitrogen-pressurizing system and a calibrated gear pump and high-pressure injection and venting system. Casing leaks are eliminated at a fraction of the cost of a well-repair job. Advantages, disadvantages and description of the process. (R10a, 1-52, T28)

41-R. How to Fight Pretreater Corrosion. Kenneth Brooks. Oil and Gas Journal, v. 58, Oct. 17, 1960, p. 127-128.

Use of intermittent water washing, inhibition and ammonia injection for corrosion control in exchanger trains in oil refineries. As a result of the process, carbon steel exchanger tubes can be substituted for alloy steel tubes in the trains. (R10, T29n; AY, CN, 4-60)

42-R. (Japanese.) Acetylene Compounds as Corrosion Inhibitors. Tomio Baba and Tsutomu Yoshino. Chemical Society of Japan, Journal, Industrial Chemistry Section, v. 63, Aug. 1960, p. 1377-1380.

Use of acetylene compounds to inhibit corrosion of thin mild steel plates in acidic solutions. 15 ref. (R10b; CN, 4-53)

43-R. Corrosion Wear of Cylinder Liners of Diesel Engines Using Residual Oil. G. Simonetti. Corrosion Technology, v. 7, Oct. 1960, p. 315-319, 334.

Mechanism of H_2SO_4 attack on diesel cylinder liners occurring through use of residual oil rich in sulphur and ashes. Use of anti-corrosive lubricating oils to prevent corrosion wear of liners during thermal cycle. (R6g, Q9, T21b)

44-R. Corrosion Prevention at Farnborough. Corrosion Technology, v. 7, Oct. 1960, p. 325-326, 334-335.

Corrosion resistance of new products for use in aircraft and missiles including a flexible fuel tank, sealed-in inhibitor tank and polyester radome. (R-general, T24)

45-R. (French.) Corrosion Fatigue During the Anodic Peroxydation of Lead. A. Coustenoble. Metaux-Corrosion-Industries, v. 35, Oct. 1960, p. 379-394.

Corrosion-fatigue testing of Pb-Sb alloys for use in accumulator grids in acid electrolyte to show the effect of corrosion cracking resistance on the rate of anodic peroxidation of Pb. 20 ref. (R1h, R1e; Pb-b, Sb)

46-R. (German.) Corrosion of Silumin and Cast Iron in Radiator Water. Gerhard

Schikorr. Zeitschrift fur Metallkunde, v. 51, Oct. 1960, p. 590-595.

Corrosion of Silumin, an Al alloy containing 9.2% Si and of cast iron engine components by water in radiator cooling system at 10-100° C. (R4, 2-61, T21b; Al-b, CI)

47-R. Slurry Spraying for the Control of Corrosion and Deposits in Oil-Fired Boilers. W. F. Cantieri and R. C. Chappell. American Society of Mechanical Engineers, Paper no. 60-WA-284, 1960, 8 p. $1.

Brief history of additives and description of equipment and application procedures for slurry. 11 ref. (R10g, T26q)

48-R. (German.) Chemical Behavior of Stainless Steel Threaded Inserts in Aluminum and Aluminum Alloys. E. A. Bommer. Aluminium, v. 36, Nov. 1960, p. 653-656.

Corrosion resistance of Cr-Ni stainless steel inserts in Al-Mg_3 alloy sections in normal atmospheres. (R11; Al-b, SS, Mg, 7-55)

49-R. Decorative Plated Coatings of Improved Durability. D. M. Bigge. Plating, v. 47, Nov. 1960, p. 1263-1268.

Corrosion resistance during outdoor exposure of Zn-base die castings plated with Cu, Ni and Cr and steel panels plated with Ni and Cr. 5 ref. (R11, L17; Zn-b, ST, Cr, Cu, Ni, 4-53, 5)

50-R. Moisture: Key to Bromine Corrosion. D. E. Lake and A. A. Gunkler. Chemical Engineering, v. 67, Oct. 31, 1960, p. 136-138.

Corrosion resistance of Ni, Pb, Monel and bronze in Br liquid and vapor. Corrosion rate as a function of Br moisture. (R6q, R-general; Cu-s, Ni, Ni-b, Pb)

51-R. Internal Cathodic Protection. C. Wilson, C. Plumpton and H. M. Powell. Nuclear Power, v. 5, Nov. 1960, p. 101-103.

Principles of the process, mathematical theory and design techniques. Reasons for success or failure in internal applications. (R10d, 10-51)

52-R. (Russian.) Corrosion in Clearance Gaps of Steel Electrolytic Equipment. R. R. Salem, E. M. Zaretski and I. Ya. Klinov. Khimicheskoe Mashinostroenie, no. 2, 1960, p. 30-33.

Distribution and diffusion of oxygen (dissolved in an electrolyte) in the clearance gaps between metal surfaces. Effect of current density and width and depth of the gap on corrosion rate. 4 ref. (R1a; ST)

53-R. Performance of Stainless-Steel Condenser Tubes. Robert H. Pell. American Society of Mechanical Engineers, Transactions, Paper no. 60-WA-217, 1960, 3 p.

Corrosion, wear resistance and heat transfer rate of welded seam 304 stainless steel tubes for power station condensers. (R4, Q9n, P11k; SS, 4-60)

54-R. (Russian.) Effect of Scale Factor on Corrosion Fatigue. G. V. Karpenko. Zavodskaya Laboratoriya, v. 26, Sept. 1960, p. 1134-1135.

Effect of sample dimensions and surface layer defects on corrosion and fatique resistance of samples exposed to water, oil and air media. (R1e, 3-73)

55-R. Reactions of Magnesium With Inorganic Constituents of Heavy Fuel Oil and Characteristics of Compounds Formed. W. D. Niles and H. R. Sanders. American Society of Mechanical Engineers, Paper no. 60-WA-278, 1960, 8 p. $1.

High temperature reactions of Mg with fuel oil-ash studied in static reaction tests to determine the effect of SO_3 partial pressure on the corrosivity of the compounds formed. 10 ref. (R7d; Mg)

56-R. (French.) Low Temperature Corrosion of Oil-Fired Boilers. A. Denis. Corrosion et Anticorrosion, v. 8, Oct. 1960, p. 347-358.

Methods of combatting corrosion of coolest parts of boilers (heat economizers, flues and the like) by SO_3 formed in combustion gases including elimination of sulphur contained in fuel; protective coatings on metal surfaces; use of metals such as cast iron for affected parts; use of neutralizing and inhibiting additives in fuel; and by abrasive shot cleaning. 6 ref. (R-general, R10, T26q)

57-R. (French.) Corrosion at Welds of 18-8 Type Austenitic Stainless Steels in Fuming Nitric Acid. M. L. J. Bernard and N. Flavian. Corrosion et Anticorrosion, v. 8, Oct. 1960, p. 359-370.

Tests in nitric acid at boiling point and room temperature on welded assemblies of a 0.03% carbon steel and a Ti-stabilized steel; and tests at room temperature and under alternating heating and cooling between 40-60°C. on micro-containers filled with nitric acid for resistance to intergranular and knife-edge corrosion in the weld. 11 ref. (R6g; SS-e, 7-51)

58-R. (Japanese.) High Electric Tension Transmission Cables. Kohichi Utsumi. Metals, v. 30, Apr. 15, 1960, p. 16-19.

Corrosion resistance, corona discharge glow and tension of steel reinforced Al aerial cables. Corrosion and electrical resistance, creep and fatigue of Pb sheathed Cu underground cables. (R-general, P15g, Q3, Q7, T1b)

59-R. (Japanese.) Corrosion Resistant Titanium Alloy Containing Palladium. Gohki Hiramatsu. Metals, v. 30, Apr. 15, 1960, p. 20-23.

Effect of Pd content on corrosion resistance and tensile properties of Ti alloy specimens prepared from arc melted castings by forging, rolling and annealing. (R-general, Q27a, 2-60; Ti-b, Pd)

60-R. Factors Influencing the Adherence of Oxides on Metals. R. F. Tylecote. Iron and Steel Institute, Journal, v. 196, pt. 2, Oct. 1960, p. 135-141.

Adherence of oxide films on Fe, Ni, Cr and Co. Ultimate tensile strengths of Ni and Fe oxides at elevated temperatures. Relative thermal expansion coefficients of metals and their oxides. 14 ref. (R1h, 2-62; Co, Cr, Fe, Ni)

61-R. Bimetallic Heat Exchanger Tubes Solve Dual Corrosion Problem. W. G. Ashbaugh and S. E. Doughty. Metal Progress, v. 78, Dec. 1960, p. 115-117, 128, 130, 132.

Cu on the outside prevents pitting and stress-corrosion cracking caused by brackish cooling water; stainless steel on the inside withstands corrosive action of chemicals being processed. (R1d, R2j, W13b, 17-57; Cu, SS, 4-60)

62-R. Protective Coatings for Corrosion Control in Production Operations. R. M. Robinson. Journal of Petroleum Technology, Oct. 1960, p. 20-24.

Control of corrosion of offshore platforms, floating, drilling and production equipment, production tanks, flowlines and subsurface equipment by metallic, bituminous, plastic and resinous coatings. (R10g, T28)

63-R. Some X-Ray Observations on the Oxidation Characteristics of Binary Niobium Alloys. Ralph H. Hiltz. Paper from "Advances in X-Ray Analysis", v. 2. Plenum Press, Inc., New York, 1960, p. 71-77.

X-ray diffraction and fluorescent studies determining the effect of alloying elements on the oxidation resistance of Cb. Alloys containing Ti, Cr, W, Cu, Fe, Ni, Zr, Mo, V, Mn, Al, Co and Si are heated in air at 1000° C. and analysis is made of the scale and the interface between the metal and the scale. 3 ref. (R1h, M22g, S11p; Cb-b)

64-R. (Spanish.) Oxidation of Columbium. Tor Hurlen. Instituto del Hierro y del Acero, v. 13, July-Sept. 1960, p. 714-728.

Rate of reaction of Cb with oxygen as function of time at 150-1000° C. and oxygen pressures between 760 and 10^{-2} mm. Hg. is measured by semi-continuous gravimetric and volumetric measurements. Oxidized specimens are examined by X-ray and electron diffraction, electron microscopy and metallographic techniques to determine composition of the oxides. (R1h, 2-61, 3-67, 3-74, M22; Cb)

65-R. Metallic Materials of Construction for the Chemical Industry. G. W. Brewer. Corrosion Prevention & Control, v. 7, Nov. 1960, p. 35-39.

Corrosion resistance of cast iron, mild and stainless steels, Ni, Cu and Al alloys and Pb in acidic, basic and neutral solutions. Prevention of weld decay. 10 ref. (R6, T29; Al-b, CI, CN, Cu-b, Ni-b, Pb, SS, 17-57)

66-R. New Theory of Rust Formation. Corrosion Prevention & Control, v. 7, Nov. 1960, p. 43.

Corrosion tests on thin pure Fe wires reacting with oxygen and water vapor at 835° F. show that rust formation may be due to penetration of the Fe by hydrogen ion which enlarges the sites where oxygen combines with the metal. (R-general; Fe-a)

67-R. Corrosion Inhibition of Aluminum Cathodic Protection by Impressed Current.

T. L. Ramachar and J. Sundararajan. Corrosion Prevention & Control, v. 7, Nov. 1960, p. 49-50.

Polarization studies on corrosion of commercial and pure Al in acid and alkaline solutions in the presence of inhibitors to determine the effectiveness of cathodic protection under these conditions. 9 ref. (R6g, R6j, R10d; Al)

68-R. Corrosion Problems and Their Treatment. Corrosion Prevention & Control, v. 7, Nov. 1960, p. i-v.

Water treatment, painting, coating, cathodic protection and insulating of steel, cast iron and nonmetallic pipelines. (R10, T26r, CI, ST)

69-R. Latest Developments in Uses of Znic. A. D. MacLellan. Corrosion Prevention & Control, v. 7, Nov. 1960, p. vi-vii.

Preventing corrosion of Fe or steel structures with Zn by hot dip galvanizing, spraying, electroplating, sherardizing and painting. (R10, L-general; Fe, ST, Zn, SGB-s)

70-R. (Russian.) Thin Oxide Films on Titanium, Zirconium, Molybdenum and Titanium Alloys. V. V. Andreeva and E. A. Alekseeva. Doklady Akademii Nauk SSSR, v. 134, Jan. 1960, p. 106-109.

Oxidation kinetics analyzed in polished samples exposed to oxygen and air at 50-400° C. for 6 hr. Oxide film thickness as a function of time and temperature. 12 ref. (R1h; Ti-b, Zr, Mo)

71-R. (Russian.) Corrosion and Electrochemical Behavior of Stainless Steels During Cathodic Polarization in Nitric Acid Solutions. Pt. 3. Effect of Steel Composition. E. N. Mirolyubov, M. M. Kurtepov and N. D. Tomashov. Izvestiya Akademii Nauk SSSR, Otdelenie Khimicheskikh Nauk, July 1960, p. 1185-1190.

Dependence of the corrosion rate in steels and alloys upon Cr, Ni, Ti and Mo concentrations and potential in 3% nitric acid electrolyte at 20° C. Effect of Ni and Cr on the dissolving rate and passivation. 12 ref. (R-general, P15; SS, Ni)

72-R. Aluminum for Sugar Handling and Processing. K. C. Latmir and J. F. Hawkins. Food Processing & Handling, v. 29, Oct. 1960, p. 371-374.

Corrosion resistance of Al alloys used in sugar refinery equipment as compared with that of steel and Cu components. (R7n; Al-b, Cu, ST)

73-R. (Japanese.) The Oxidation of W-Co Layer Electrodeposited on 0.06% C Steel and Its Carburized Surface. Hisashi Yamamoto. Japan Institute of Metals, Journal, v. 24, July 1960, p. 421-424.

Oxide films formed on carburized W-Co electroplate during heating in air at 100-1100° C. are studied by X-ray and electron diffraction. Data are given for deposit hardness, weight gain and composition and microstructure of the W and CO oxide layers. 3 ref. (R1h, M-general; ST, W-b, Co-b, 8-62)

74-R. (Japanese.) A Method of Corrosion Potential Measurement Using Microelectrode. Goro Yokoyama. Japan Institute of Metals, Journal, v. 24, July 1960, p. 445-449.

Corrosion potentials of Zn, Fe, Cd, Sn, Cu, Al and Sb in 10% NaCl and 20% H_2SO_4 solution measured by microelectrodes. 4 ref. (R11m; Zn, Fe, Cd, Sn, Cu, Al, Sb)

75-R. (Japanese.) Application of Microelectrode Method for Measuring Corrosion Potential of Alloy Structures. Goro Yokoyama. Japan Institute of Metals, Journal, v. 24, July 1960, p. 449-452.

Corrosion potentials of three-phase Cd-Sb alloys and a Cu-Zn diffused layer are determined by a microelectrode system which comprises measuring noble, interphase and base metal phases separately and conjunctively. 4 ref. (R11m; Cd-b, Sb, Cu-b, Zn)

76-R. Inorganic Coatings. Harry A. Pearl. Space/Aeronautics, v. 34, Nov. 1960, p. 56-59.

Oxidation and thermal resistance, tensile properties and ductility of Mo, Cb, W and graphite coated with Durak MG and Cr electrodeposits at temperatures above 2000° F. (R1h, Q27, Q23p; Cb, Mo, W, Cr, Mg, 8-62)

77-R. (Swedish.) Corrosion of Steel in the Atmosphere. Uno Tragardh. Teknisk Tidskrift, v. 90, Nov. 4, 1960, p. 1103-1105.

Samples of a carbon steel containing 0.05% C, 0.014% P, 0.039% S, 0.35%

Mn, 0.002% Si, 0.066% Cu, 0.007% Mo, 0.048% Ni and 0.011% Sn are exposed to natural and industrial atmospheres. Effects of humidity and SO_2 content on corrosion velocity. 8 ref. (R3; CN)

78-R. Effects of Alloying on Oxygen Resistance and Mechanical Properties of Columbium. Industrial Heating, v. 27, Nov. 1960, p. 2410, 2416.

Effect of additions of W, Ti, Al, V, Mo, Cr and Zn on oxidation resistance, tensile strength and stress rupture properties of Cb. (R-general, Q3m, Q27a, 2-60; Cb-b, Al, Cr, Mo, Ti, V, W)

79-R. Cathodic Processes on Passive Zirconium. Robert E. Meyer. Electrochemical Society, Journal, v. 107, Oct. 1960, p. 847-853.

Rates of reduction of oxygen, hydrogen, cupric ion and hydrogen peroxide on passive Zr in acidic solutions of sodium sulphate are measured at 25-85° C. Kinetic orders of reduction are determined from measurements of current as a function of concentration. 6 ref. (R10c; Zr)

80-R. Studies in Corrosion of Brass: Corrosion in Aqueous Solutions of Some Acids and Salts. A. M. Trivedi and M. N. Desai. Indian Journal of Applied Chemistry, v. 23, Jan. 1960, p. 2, 10-17.

Dezincification, decuprification and protective film and complex formation during corrosion of brass by solutions of various acids and salts. Effect of concentration of corrosive media and time of immersion on corrosion rate. (R2k, R6; Cu-n)

81-R. A Look at Corrosion-Resistant Fasteners. Robert D. Tuttle. Assembly & Fastener Engineering, v. 3, Dec. 1960, p. 38-40.

Strength/weight ratio, electrical conductivity, temperature resistance and quality of corrosion-resistant fasteners composed of Al, Cu and Ti alloys and stainless steel. (R-general, P15g, Q27, T7f; Al-b, Cu-b, SS, Ti-b, 17-57)

82-R. (Russian.) Radioactive Tracer Study on Oxidation of Liquid Copper by Sulphur. I. I. Pokrovsky and M. M. Pavlyuchenko. Doklady Akademii Nauk SSSR, Fizicheskaya Khimiya, v. 134, Feb. 1960, p. 391-393.

Radioactive isotope S^{35} is introduced into the oxide scale during oxidation of heat treated (at 1000° C.) pure Cu to determine structure of the various scale layers. Sulphide scale formation as a function of mutual diffusion between the metal and the sulphur. 4 ref. (R1h, M23q, N1; Cu, 14-60)

83-R. (Russian.) Corrosion and Electrochemical Behavior of Stainless Steels in Nitric Acid Solutions With Cathodic Polarization. Pt. 2. Cathodic Processes. E. N. Mirolybov, M. M. Kurtepou and N. D. Tomashov. Izvestiya Akademii Nauk SSSR, Otdelenie Khimicheskikh Nauk, July 1960, p. 1178-1184.

Analysis of cathodic polarization curves for stainless steel in entirely dissociated HNO_3 solution at 20° C. Mechanism of self dissolution of the cathode and reduction of HNO_3 to HNO_2 on the activated stainless steel in presence of homopolar molecules of HNO_2. 17 ref. (R6g, R1j; SS)

84-R. Engine Rusting in Service and Dynamometer Tests. P. A. Bennett. Lubrication Engineering, v. 16, Nov. 1960, p. 529-538.

Rusting of internal automobile engine parts under low temperature operation. Effect of physical-chemical properties of lubricants, carburetor air humidity and engine blowby rates on rusting. (R-general, T21b, 2-63)

85-R. (French.) Penetration of Sulphur Corrosion in Steels Placed Under Stress in Sodium Sulphide. E. Hierzog and L. Backer. Comptes Rendus, v. 251, Oct. 17, 1960, p. 1633-1635.

Surface activity, depth of penetration and distribution of sulphur in oil-quenched, tempered test bars of low-carbon steel placed under static bending stress. S^{35} is used as a tracer. (R-general, M27, 1-73; CN-g, S)

86-R. The Volatile Corrosion Inhibitors. Modern Packaging, v. 34, Nov. 1960, p. 116-117.

Chemical coating of packaging for ferrous metal parts to produce invisible vapor that prevents oxygen from combining with metal to form rust. Problems of greasing, shipping, dismantling and degreasing are eliminated. (R10b)

87-R. (Italian.) Preliminary Research on the Behavior of Pure Metals Immersed in Molten Alloys. P. Spinedi and G. Signorelli. Metallurgia Italiana, v. 52, Aug. 1960, p. 202-204.

Corrosion of electrolytic Cu wire immersed in molten Cd-Zn and Sn-Zn alloys of varying compositions; dissolution of specimen metal and appearance of intermetallic phases at liquid-solid interface. 10 ref. (R6m; Cu, Cd-b, Zn, Sn-b, Zn)

88-R. Crystal Growths and the Corrosion of Iron. Earl A. Gulbransen and Thomas P. Copan. Nature, v. 186, June 18, 1960, p. 959-960.

Effect of water vapor on corrosion of Fe is determined by exposing annealed pure zone-refined Fe wires to oxygen, water vapor and several gas mixtures of water vapor and oxygen. Electron microscope and electron diffraction studies. 5 ref. (R4d, M26n, M213, M22h; Fe, 4-61)

89-R. (English.) Selenites and Tellurites as Corrosion Inhibitors. Brahm Dev and B. D. Jain. Journal of Scientific & Industrial Research, v. 19B, Oct. 1960, p. 408.

Corrosion of cold-rolled steel by tap water is inhibited by the addition of 0.05% potassium selenite, 0.5% potassium selenate or 0.2% potassium tellurite. Low concentrations of selenite and tellurite accelerate corrosion. 3 ref. (R10b, R4; ST)

90-R. Keep Rust Off Parts and Subassemblies. George A. Hatfield. Mill & Factory, v. 67, Dec. 1960, p. 100-101.

Procedures for storing metal parts to protect against corrosion and physical damage. Description of various specially treated papers, tapes and plastic sheets now available. (R10e)

91-R. (Italian.) Use of an Electronic Potentiostat in Testing Stainless Steels for Intercrystalline Corrosion. B. Corradi and E. Gasperini. Metallurgia Italiana, v. 52, Sept. 1960, p. 249-254.

Heat treated, bent or welded Cr-Ni stainless steels are mechanically and electrolytically polished, then corrosion tested in NH_42SO4 at steady potentials of 0-5 V. 7 ref. (R6k, 2-64, 3-68; SS, Cr, Ni)

92-R. The Mechanism of Erosion of Ductile Metals. Iain Finnie. 3rd. U. S. National Congress of Applied Mechanics, Proceedings, 1958, p. 527-532.

Derivation of equations which predict weight loss from erosion by considering the behavior of a single abrasive grain impinging on the surface. Experimental results for SAE 1020 steel, low carbon steel, Cu and Al eroded by diamonds, silicon carbide grains and steel shot. (R1c, R11r; Al, Cu, CN, ST)

93-R. (Japanese.) Effect of Si on High Temperature Oxide Films in Heat-Resisting Alloys. Masataka Sugiyama and Tadayuki Nakayama. Japan Institute of Metals, Journal, v. 24, Aug. 1960, p. 541-544.

Electron and X-ray diffraction studies of initial oxide films formed on the surface of 302 B, 19-9 DL, Durimet 20 and Nichrome oxidized in air at 700-900° C. and subsequently reheated to 1300° C. Relation of the formation of special heat resisting films of amorphous SiO_2 to the initial stages of oxidation and the Si content of the alloy. 9 ref. (R1h, 2-60, 2-62, M22; SGA-h, SS, Ni-b, Si, 14-62)

94-R. (Translation-BWRA.) Investigation of Corrosion Resistance of Aluminium Welds. N. N. Skvortsov. Welding Production, Nov. 1959, p. 52-55.

See item 281-R, May 1960. (R11; Al, 7-51)

95-R. (French.) Trans-Passive State of 18/8 Austenitic Stainless Steels. I. Epelborn, M. Froment and Ph. Morel. Corrosion et Anticorrosion, v. 8, Nov. 1960, p. 383-393.

Steels with 0.02-0.23% C, 0.1-0.71% Mn, 0.1-0.48% Si, 17.2-19.1% Cr, 8.8-12.6% Ni and 0-0.54% Ti are made the anode in a IN solution of H_2SO_4 with applied voltage of 1-1.7. It is found that the appearance and degree of secondary passivation depend on the carbon content. 10 ref. (R10c; AY)

96-R. (French.) Low-Alloy Corrosion Resistant Steels. E. Herzog. Corrosion et Anticorrosion, v. 8, Nov. 1960, p. 394-406.

Steels containing 0-0.2% Cu, 0.001-0.03% S, 0-4.18% Cr, 0-0.78% Al and 0-1.12% Ni are corrosion tested in atmospheres containing SO_2, CO_2 and to marine and industrial atmospheres of varying humidity by exposure to coal, $(NH_4)2SO4$ and silica dusts and to fresh and sea waters. Effect of alloying elements and stress on corrosion resistance. (R-general, R11, AY)

97-R. (German.) Anodic Passivation of Metals. K. Schwabe. Electrochimica Acta, v. 3, Oct. 1960, p. 186-194.

A kinetic treatment of the passivation of ferrous metals is developed on the premise that porous films do not constitute a necessary requirement for the passivation of metals, especially Ni and Fe and that hindered dissolution of the metals leads to the formation of chemisorbed oxygen layers. 18 ref. (R10c; Fe, Ni)

98-R. Thermodynamics of Corrosion in Fused Chlorides. C. Edeleanu and R. Littlewood. Electrochimica Acta, v. 3, Oct. 1960, p. 195-207.

Effect of the mobility of the metal, stability of the chloride, initial redox potential of the melt, pressure over the system and presence of impurities on the corrosion of Ni and Cr in molten-chloride systems. 10 ref. (R7h; Cr, Ni)

99-R. Rapid Pitting Corrosion on Gas Scrubber. Corrosion, v. 16, Dec. 1960, p. 9-11.

Attack is evident in only three weeks of operation from salt accumulation on areas not washed down by water showers. Titanium and Hastelloy C exhibit excellent resistance to corrosive attack, but none of the materials tested show better resistance than 316 stainless. Monel, Inconel and Ni failed rapidly in the scrubber exposure, probably because of the traces of SO_2 in the gases. (R2j; Ti, Ni-b, SS)

100-R. Impressed Current Anodes for Cathodic Protection. Corrosion, v. 16, Dec. 1960, p. 79-84.

Data for calculating anode resistance to earth. Recommendations for installing anodes for various soil conditions. Advatages are given for deep ground beds in high resistivity soil and in urban areas. Use of Pb alloy and Pt anodes for underwater use. (R10d)

101-R. High Temperature Corrosion in Refinery and Petrochemical Service. Corrosion, v. 16, Dec. 1960, p. 85-92.

Problems of oxidation, sulphidation and carburization in relation to the effects of condensate corrosion and residual oil ash corrosion. Contributions of various alloying elements in the common engineering alloys to their physical and mechanical behavior as well as to their corrosion resistance at elevated temperatures. (R7a, 2-62)

102-R. Internal Carburization and Oxidation of Nickel-Alloys in Carbon Monoxide Type Atmospheres. Corrosion, v. 16, Dec. 1960, p. 100-104.

Tests show that the rate of internal carburization and oxidation of Ni-Cr alloys attains a maximum at 1500-1750° F. Attack is slight at 1330 and 1830° F. The presence of carbon dioxide, water vapor and hydrogen in the carbon monoxide does not significantly affect the rate of penetration. (R2s; Ni-b, Cr)

103-R. (German.) Influence of Palladium Additions to Titanium and Titanium Alloys on Corrosion Resistance and Passivation. U. Zwicker. Metalloberflache, v. 14, Nov. 1960, p. 334-337.

Hot rolled, descaled and degreased sheet specimens of pure Ti and of TiAl4V4, TiAl6V4, TiCr5Al3 and TiAl9V3 alloys; with and without 0.1% Pd addition, are corrosion tested for 2-1000 hr. in 20% HCl + 0.0013-1.3% HNO_3 at room temperature (22-25° C). (R-general, R10c, 2-60; Ti-b, Pd)

104-R. (Russian.) Resistance of Hydroturbine Materials to Cavitation Erosion. N. I. Pylaev. Energo-Mashinostronie, Sept. 1960, p. 28-31.

Turbine blades face hardened by carbon, low alloy and stainless steels are tested for cavitation erosion during operation and under laboratory conditions. 4 ref. (R2m, L24, T7h; AY, CN, SS)

105-R. Aluminum Reactions With Water Vapor, Dry Oxygen, Moist Oxygen and Moist Hydrogen Between 500 and 625° C. P. E. Blackburn and E. A. Gulbransen. Electrochemical Society, Journal, v. 107, Dec. 1960, p. 944-950.

Rate of reaction of Al in water vapor and in mixtures of water vapor with hydrogen or oxygen is studied in a Kanthal resistance furnace. Effect of corrosive atmosphere and oxide film formation and treatment in HCl solution on reaction rates. (R1h, 2-66; Al)

106-R. Dissolution of Copper in Sulphuric Acid Solutions. D. P. Gregory and A. C. Riddiford. Electrochemical Society, Journal, v. 107, Dec. 1960, p. 950-956.

Rate of reaction of brass and amalgamated Cu disks rotating in H_2SO_4 solution is measured as a function of temperature, stirring speed, acid concentration and surface preparation. 20 ref. (R6g, 2-61, 2-66; Cu-n)

107-R. Microtopography of Oxide Films Formed on Tantalum. R. E. Pawel, J. V. Cathcart and J. J. Campbell. Electrochemical Society, Journal, v. 107, Dec. 1960, p. 956-960.

Structures of the oxide films formed by oxidation of Ta in air at 300-700° C. are studied by optical and electron microscopy. 5 ref. (R1h, M27, M21, 2-61; Ta, 14-62)

108-R. The Role of the Oxygen Concentration Cell in Crevice Corrosion and Pitting. G. J. Schafer, J. R. Gabriel and P. K. Foster. Electrochemical Society, Journal, v. 107, Dec. 1960, p. 1002-1004.

It is proposed that, for any particular metal, steady-state pitting and crevice corrosion occur by identical mechanisms involving both the action of differential acid and differential oxygen concentrations. Arguments are given against the differential aeration cell mechanism as the sole agent responsible for localized corrosion. 17 ref. (R1b, R2j)

109-R. Copper Sulphide Creep on Porous Electroplate. M. S. Frant. Electrochemical Society, Journal, v. 107, Dec. 1960, p. 1009-1011.

Growth of CuS films on Cu plated with Sn and other metals and Cu coated with nitrocellulose and acrylic lacquers. 9 ref. (R1h; Cu, 8-62, 8-70)

110-R. (Japanese.) High Temperature Oxidation of Zirconium and Zirconium Alloys in Carbon Dioxide. Tatsuo Maekawa. Japan Institute of Metals, Journal, v. 24, Sept. 1960, p. 608-611.

The oxidation rate of reactor-grade pure Zr and 2.5% Sn and 0.24% FeZr alloy in CO_2 measured at 650-850° C. and 15-760 mmHg pressure using the weight gain method. 8 ref. (R1h, 2-62; Zr-b)

111-R. (Japanese.) Oxidation of Zirconium and Zirconium Alloys. Pt. 2. Tadao Sano, Shosuku Imoti and Mungyu Kang. Japan Institute of Metals, Journal, v. 24, Sept. 1960, p. 604-607.

Effects of Te additions on oxidation of Zr, Zircaloy 2 and Zircaloy 3 at 750-850° C. Relation to vacancy mobility and concentration, valency and ionization potential. 6 ref. (R1h, M26s, P15m, 2-61; Zr-b, Te)

112-R. (Japanese.) High Temperature Oxidation of Zirconium and Its Alloys in Water-Vapor. Tatsuo Maekawa and Junjiro Kai. Japan Institute of Metals, Journal, v. 24, Sept. 1960, p. 581-584.

Rates of oxidation and hydrogen absorption measured at 650-850° C. for iodide processed high purity Zr, commercial grade Zr, Kroll processed reactor-grade Zr and alloys containing 2.5% Sn and 0.24% Fe. 13 ref. (R1h, P13d; Zr-b, H)

113-R. (Russian.) Effect of Tantalum on the High Temperature Oxidation of Columbium. R. F. Voitovich and V. A. Lavrenko. Fizika Metallov i Metallovedenie, v. 10, Apr. 1960, p. 554-559.

Cb-Ta alloy samples of various composition are oxidized at 500-900° C. in recrystallized and strain hardened state (deformation 33%). Additions of Ta improve corrosion resistance at temperatures up to 800° C. Evaporation of volatile scale components takes place above 800° C. and is believed to be influenced by deformation. 5 ref. (R1h, 2-60, 2-61; Cb-b, Ta)

114-R. (Russian.) Basic Problems in Study of Oxidation Mechanism. S. Mrovets and T. Veber. Fizika Metallov i Metallovedenie, v. 10, Apr. 1960, p. 574-580.

Mechanism of two-layer sulphide scale formation on Cu and Ag. Process of "inert marking" using Pt wire for study of diffusion between metal-metalloid. Structure and activity of the layers. 48 ref. (R1h; Cu, Ag)

115-R. Stress-Corrosion Cracking of Alpha-Brass and Similar Alloys. C. Edeleanu and A. J. Forty. Philosophical Magazine, v. 5, Oct. 1960, p. 1029-1040.

Microscopic examination of brass single crystals immersed in ammonia, after deformation by bending. A mechanism consisting of local embrittlement followed by a cleavage-like fracture is suggested for crack propagation in stress corrosion. 10 ref. (R1d, Q26s; Cu-n, 14-61)

116-R. (Russian.) Mechanism of Sulphide Corrosion of Iron. P. V. Held and A. K. Krasovskaya. Zhurnal Fizicheskoi Khimii, v. 34, Aug. 1960, p. 1721-1727.

Sulphidization of Armco iron samples in a quartz tube from 500-800° C. Determination of micro and macrostructure of the sulphide scale; influence of size and curvature of a sample on the thickness of the scale. Mutual diffusion of S and Fe in the scale and formation of pyrrhotite. 10 ref. (R6p; Fe-a)

117-R. (Russian.) Resistance of Cr-Ni-Mo-Cu Steels to Corrosion in Etching Solutions. E. V. Zotova. Metallovedenie i Termicheskaya Obrabotka Metallov, Nov. 1960, p. 14-15.

Influence of various additions of Ni and Cr on corrosion rate in H_2SO_4 solutions of 5-20% concentration at 80° C. for 100 hr. Evaluation of steel compositions suitable for use in etching equipment. (R6g, M20q, 2-60; ST, Cr, Cu, Mo, Ni)

118-R. (Russian.) Structural Changes and Corrosion Resistance in Kh17N2 Stainless Steel. A. P. Akshentseva. Metallovedenie i Termicheskaya Obrabotka Metallov, Nov. 1960, p. 7-12.

Hardness, structure, impact strength and corrosion resistance of welded samples normalized at 800-1300° C. for 1-5 min., then annealed at 300-900° C. Annealing of weldments at 680-700° C. for 1 hr. to provide complete removal of stresses, formation of stable Cr carbides on the grain boundaries and intercrystalline corrosion resistance. (R-general, Q-general, M27, 2-64; SS)

119-R. (Russian.) Protection of Low Alloy Pearlitic Steels Against High Temperature Gas Corrosion. A. V. Ryabchenkov and V. I. Velemitsina. Metallovedenie i Termicheskaya Obrabotka Metallov, Nov. 1960, p. 39-42.

Corrosion and frictional wear resistance, hardness and bend strength of 15KhMFKR steel electroplated by Ni-P at 92° C. and subsequently heat treated at 400° C. Application to parts operating in superheated vapors. (R-general, Q29n, Q5g; ST, 8-62)

120-R. (Polish.) Kinetics and Mechanism of Reaction Between Sulphur and Silver-Zinc Alloys. Stanislaw Mronec, Krystyna Wallisch and Teodor Weber. Archiwum Hutnictwa, v. 5, Apr. 1960, p. 323-344.

The rate of sulphurization as a function of temperature (300-444° C.) and Zn concentration in Ag-Zn alloy. Structure of scale layers is analysed by the inertial marking method. Data on values for activation energy and parabolic constants. 27 ref. (R2r, 2-60, 2-61; Ag-b, Zn-b)

121-R. New Corrosion-Testing Service Solves Pipe-Valve Problems. Iron Age, v. 186, Dec. 22, 1960, p. 64-65.

Description of a corrosion test in which test rods composed of type 304 or 316 stainless, Aloyco 20 or Aloyco 25-12S are mounted inside processing lines to determine their corrosion resistance and therefore their effectiveness as pipe and valve materials. (R11, T7b, T26r; SS, 17-57)

122-R. (Japanese.) Oxidation of Molten 85-5-5-5 Red Brass. Shigeo Oya, Umewa Honma and Hiroshi Nakazima. Imono (Japan Foundrymen's Society, Journal), v. 32, Sept. 1960, p. 648-657.

Oxidation of red brasses containing approximately 85% Cu, 5% Pb, 5% Sn and 5% Zn is studied by X-ray diffraction and electron microscopy analysis and by fracture tests of cast chill blocks. Data are given for oxidation pattern and effect of time, temperature, grain size and composition. 9 ref. (R1h; Cu-n)

123-R. Corrosiveness of Indoor Atmosphere. T. Henry Turner. Engineer, v. 210, Dec. 2, 1960, p. 935.

Test specimens composed of bare low alloy or mild steel or of mild steel coated with Zn or Al are exposed to various types of indoor factory atmospheres for a period of one year. Effect of plant humidity and acid fumes and of Zn or Al coating on the corrosion rate of the specimens. (R3n; AY, CN, 8)

124-R. Stress Corrosion Cracking of Ti-5Al-2.5 Sn. Hiram Brown. Light Metal Age, v. 18, Dec. 1960, p. 4-7.

Stress corrosion testing of bent Ti alloys at 1150-1500° F. in air, trichloroethylene and cutting oil media to determine the cause of cracking during fabrication of complex assemblies. (R11s, R1d; Ti-b, Al, Sn)

125-R. Corrosion Protection of Magnesium in Electronic Equipment. Harold Shapiro. Light Metal Age, v. 18, Dec. 1960, p. 7-10.

Evaluation of organic finishes to prevent electrolytic corrosion of Mg with emphasis on plastisols and organosols. Methods of Sn plating and immersion Zn coating. (R1a, L17; Mg, Sn, Zn, NM-d30)

126-R. (Japanese.) Corrosion of Copper Alloys in High Temperature Water and Steam. Pt. 2. Takemichi Otsu and Shiro Sato. Japan Institute of Metals, Journal, v. 24, Oct. 1960, p. 637-641.

Corrosion tests on 5-40% Zn-Cu alloys, as cold rolled and annealed strip in saturated water and steam at 300° C. for 250 hr. Data for effect of corrosion on tensile strength and elongation, corrosion penetration and corrosion mechanisms and nature of the Cu-Zn-ZnO corrosion product. 5 ref. (R1h, R4, R10, Q-general, 2-62; Cu-b, Zn)

127-R. (Japanese.) Effect of Halide Ions on the Anodic Passivation of Zirconium. Akimi Vmezono and Susumu Morioka. Japan Institute of Metals, Journal, v. 24, Oct. 1960, p. 680-684.

Anodic polarization curves for Zr in acid, neutral and alkaline solutions containing F, Br, Cl and I ions and small quantities of oxidizing agents. Effect of halide ion concentration, pH oxy-anions and general anions on pitting corrosion. 5 ref. (R10c, R1h, R2j, 2-66; Zr)

128-R. An X-Ray High-Temperature Oxidation Study on Iron-Copper. H. J. Goldschmidt. Iron and Steel Institute, Journal, v. 196, Dec. 1960, p. 390-393.

Use of a high temperature X-ray diffraction camera to follow oxidation sequences on Fe-Cu powder compacts. Determination of types and proportions of pure metal and oxide phases with changes in time and temperatures up to 1000° C., at low air pressure. 11 ref. (R1h, M22g, M24b, 2-62; Cu-b, Fe-b, 6-72)

129-R. Marker Movements in the Oxidation of Iron and Some Other Metals. R. F. Tylecote and T. E. Mitchell. Iron and Steel Institute, Journal, v. 196, Dec. 1960, p. 445-453.

Study of Swedish charcoal iron APC, copper NPE, Zr and Ti samples, marked with Pt wire and oxidized at 750-1000° C. for 1/2 to 65 hr. Effects of diffusion mechanism, oxide film plasticity and adherence of the film to the metal surface on movement of the marker inward with the metal interface or outward with the oxide/air interface. 17 ref. (R1h, N1; Cu, Fe, Ti, Zr)

130-R. Relation Between Boiler Cleanliness and Feedwater. F. U. Neat. American Society of Mechanical Engineers Paper no. 60-WA-216, 1960, 11 p. $1.

Corrosion of steel boiler and of condenser tubes composed of Cu, Cu-Ni alloy, Monel, Inconel, brass and stainless steel by dissolved oxygen and ammonia. Influence of boiler water pH. (R4c; Cu-b, Ni-b; SS, 4-60)

131-R. Protective Coatings. Francis Scofield. I/EC (Industrial and Engineering Chemistry), v. 52, Oct. 1960, p. 879-880.

A literature review covering protective organic coatings which show increasing resistance to chemicals, abrasion and corrosion. New applications for structural steel. 72 ref. (R-general, Q9n; SGA-s, ST, 8-69)

132-R. Titanium. H. B. Bomberger and H. A. Clampett, Jr. I/EC (Industrial and Engineering Chemistry), v. 52, Oct. 1960, p. 886-888.

Chemical properties and corrosion resistance of Ti and its alloys. Use of Ti in electrodes, heat exchangers and impellors. (R-general, W29h, W13b; Ti, 17-57)

133-R. (English.) Cavitation Erosion of Screw Propellors. Nils Christian Astrup. Acta Polytechnica Scandinavica, Mechanical Engineering Series, no. 7, 1960, 16 p.

Mechanism and hydrodynamics of cavitation. Types described include "sheet", "tip vortex", "cavern", "worm-eaten" and super cavitation. Suggested precautions to avoid cavitation erosion. (R2m, T22h)

134-R. (German.) Material Requirements of Mechanical Precision Engineering. K. Franz. VDI Berichte, no. 46, 1960, p. 7-16.

Detection of defects caused by improper materials including intercrystalline corrosion of Zn die castings caused by Sn, Cd or Pb impurities, dimensional changes in high-accuracy parts, cold creep of Zn wire, corrosion of Cu, brass and Zn sheet caused by nonstabilized PVC (polyvinylchloride) insulation, stress

corrosion on brass parts and electrolytic corrosion of electric coils. (R-general, Q3; Cu-b, Zn, Cd, Pb, Sn)

135-R. (German.) Weathering of Precision Apparatus With Particular Reference to Metallic Materials. A. Eckstein. VDI Berichte, no. 46, 1960, p. 17-25.

Definition of testing conditions and operations necessary to obtain results significant for different climates. Reaction mechanisms of metallic corrosion. Corrosion protection by, and control of coating thickness in, electroplating and plastic coating. (R3, L17, L26p)

136-R. (German.) Corrosion Testing of Electrical Contacts. J. Weissler. VDI Berichte, no. 46, 1960, p. 27-30.

Permanent wire wrap connections and non-permanent (edge connector, switch contact) contacts are corrosion tested in a 3% NaCl solution spray test under tropical, European and industrial climatic conditions. (R11j, T1d)

137-R. (German.) Corrosion of Steels in Hot Gases. Hans Keller. Chemie-Ingeniur-Technik, v. 32, Sept. 1960, p. 582-584.

Corrosion of ferritic X10CrAl24 and austenitic X15CrNiSi 2520 steel tubes through which coal grains are flowing under nitrogen atmosphere containing small amounts of CO_2 and sulphur at 800-1000° C. Corrosion of steel by oil containing vanadium at over 660° C. (R6; SS)

138-R. Evaluation of Aluminum Enamels. A. W. Brace. Institute of Vitreous Enamellers Bulletin, v. 11, Nov. 1960, p. 21-27.

Selection of suitable Al grades for vitreous enamelling and methods of surface preparation. Tests for spalling, acid and alkali resistance and abrasion resistance in relation to firing conditions and coloring oxide used. 9 ref. (R6, Q9n; Al, 8-71)

139-R. Nickel-Chromium Plated Aluminum Sheet. R. C. Spooner and D. P. Seraphim. Metal Finishing, v. 58, Dec. 1960, p. 40-44.

Atmospheric corrosion resistance of 3S Al alloy panels plated with bright Cr (Cu-Ni-Cr deposit) after pretreatment with phosphoric acid anodizing, zincate or Vogt processes. (R3; Al-b, Cr, Cu, Ni, 8-62)

140-R. Measurement of Thickness and Porosity of Oxide Films on Iron and Aluminum. K. F. Lorking. Journal of Applied Chemistry, v. 10, Nov. 1960, p. 449-456.

Capacity measurements obtained with an a-c. bridge are used to determine thickness of nonporous oxide films on Fe and Al surfaces and to show the effect of both the solvent action of aqueous solutions and electrochemical processes on the thickness of these films. 14 ref. (R1h; Al, Fe)

141-R. A Comparison of the Corrosiveness of Indoor Atmospheres. J. F. Stanners. Journal of Applied Chemistry, v. 10, Nov. 1960, p. 461-470.

Corrosion testing of bare, pickled mild steel, bare, pickled low-alloy steel, mild steel coated with Al and mild steel coated with Zn in industrial atmospheres to determine corrosion rate as a function of humidity and amount of ventilation. 7 ref. (R3n; AY, CN, 8-67)

142-R. Stress-Corrosion Failure of Austenitic Stainless Steel. A. B. Chatterjea and B. R. Nijhawan. NML Technical Journal (National Metallurgical Laboratory, India), v. 2, Aug. 1960, p. 20-25.

Industrial failure of austenitic stainless steel in H_2SO_4 and $(NH_4)_2SO_4$ at 90-100° C. is investigated and attributed to stress-corrosion attack. (R1d, R11s; SS-e)

143-R. Hardening by Internal Oxidation As a Function of Velocity of the Oxidation Boundary. J. L. Meijering. Metallurgical Society of AIME, Transactions, v. 218, Dec. 1960, p. 968-971.

Oxidation hardening in cylindrical and spherical specimens of Ag-Mn, Ag-Be, Ag-Mg, Cu-Be and Cu-Be alloys at 800-1200° C. Oxidation hardening first decreases with depth below the surface, but then increases again as the center is approached. This is in agreement with the view that change in hardness is mainly determined by the change in velocity of the oxidation boundary, which affects oxide dispersion. 6 ref. (R2s, Q29n; Cu-b, Ag-b)

144-R. Corrosion and Electrode Potential Studies of Nickel-Chromium Coatings. A. H. DuRose. Paper from "American Electroplaters' Society, Technical Proceedings", 1960, p. 83-89.

The outdoor corrosion weight loss for bright Ni foil is only slightly greater than that for sulphur-free Ni but the number of perforations is much greater for bright Ni and Cr intensifies the degree of perforation. Potential, galvanic and polarization data are given for bright Ni, sulphur-free Ni and Cr. 26 ref. (R-general; Ni, Cr, 8-62)

145-R. A Progress Report on Experiences in Improving Corrosion Resistance of Automobile Parts. J. C. Thomas, D. W. Hardesty and C. F. Nixon. Paper from "American Electroplaters' Society, Technical Proceedings", 1960, p. 90-95.

Correlation of CASS Test results and performance of plated parts. Reliability and reproducibility of test results. 7 ref. (R11, T21c)

146-R. New Data on the Performance of Nickel and Chromium Plated Zinc Die Castings. W. H. Safranek, H. R. Miller, R. W. Hardy and C. L. Faust. Paper from "American Electroplaters' Society, Technical Proceedings", 1960, p. 96-104.

New accelerated corrosion data show that a combination of duplex Ni and thicker than normal, crack-free type Cr provides a more prolonged corrosion resistance than a composite of duplex Ni and ordinary Cr or a composite of bright Ni and thicker, crack-free Cr. 14 ref. (R11; Zn, 5-61, Ni, Cr, 8-62)

147-R. Experience in the Operation and Performance of Dual Chromium Systems. W. E. Lovell, E. H. Shotwell and J. Boyd. Paper from "American Electroplaters' Society, Technical Proceedings", 1960, p. 215-225.

CASS tests on dual Cr plated automobile parts and roofs; minimum Cu and Ni thickness requirements; factors favorable to good anticorrosion performance. (R11, T21)

148-R. Epoxide Resins for Corrosion Resistant Applications. G. J. Powell. Current Engineering Practice, v. 3, Sept. 1960, p. 22-24.

Coating of structural steel and concrete with an amine cured paint composed of coal tar pitch and epoxide resin to prevent corrosion. (R10g, L26p; ST, 4-57)

149-R. (Translation-ConBur.) The Mechanism of Hydrogen Peroxide Formation in the Corrosion of Metals. T. M. Abramova, I. L. Gankina and A. S. Fomenko. Academy of Sciences of the USSR, Proceedings, Physical Chemistry Section, v. 129, Nov-Dec. 1959, p. 1021-1024.

The change in the isotopic compositon of H_2O_2 formed during the corrosion of Zn, Mg, Cd, Al and Sn in oxygen and water is determined by a radioactive tracer technique. (R4, R1h, S11q; Al, Mg, Sn, Zn)

150-R. (Translation-ConBur.) An Electronographic Study of Passive Films on Zinc. A. I. Levin, M. E. Prostakov and G. D. Susloparov. Academy of Sciences of the USSR, Proceedings, Physical Chemistry Section, v. 129, Nov-Dec. 1959, p. 995-998.

Structures of surface films formed on Zn by liquid alkaline oxidizing media and by anodic treatment in solution of pure alkalism are determined by X-ray diffraction. (R1h, L19, M27, M22g; Zn)

151-R. (Translation-ConBur.) Protection of Steel Against Gaseous Corrosion by Glass-Metal Coatings. E. A. Antonova and A. A. Appen. Journal of Applied Chemistry of the USSR, v. 32, Nov. 1959, p. 2536-2541.

Steel protected with glass-Cr layers remains almost unoxidized in air up to 1000° C. General properties of such coatings make them more advantageous than silicate enamels or protective layers produced by thermal diffusion of Si or Cr. 14 ref. (R10g; ST)

152-R. (Translation-ConBur.) Influence of Temperature on the Effect of Polarization in the Corrosion Cracking of V-95 Alloy in a 0.1 N Solution of H_2SO_4 + 35 g. Per Liter of NaCl. V. V. Romanov and V. V. Dobrolyubov. Journal of Applied Chemistry of the USSR, v. 32, Nov. 1959, p. 2556-2559.

Temperature substantially influences shape of polarization curve. Current density, required for protection of the alloy from corrosion cracking, increases linearly as temperature rises. Influence of anodic polarization is most effective at 20 and 35° C., less effective at 50° C. and absent at 70° C. 4 ref. (R1d, R6, 2-61; Al-b)

153-R. (Translation-ConBur.) Corrosion of Lead in Contact With Graphite. V. A. Titov and E. N. Semkova. Journal of Applied Chemistry of the USSR, v. 32, Nov. 1959, p. 2560-2565.

When graphite is combined with Pb in HCl solutions an electrochemical couple

is formed in which Pb acts as anode and graphite as cathode, contact of graphite with Pb increases its corrosion more than 100% in 20% HCl and about 50% in 35% HCl. Corrosion rate increases exponentially with temperature. Admixtures of methyl chloroformate in HCl affect the corrosion in different ways depending on the acid concentration. 20 ref. (R6g, 2-60; Pb)

154-R. Internal Cathodic Protection. Pt. 7. Line Anodes in Cylindrical Tanks; the Edge Effect. C. Plumpton and C. L. Wilson. Corrosion Prevention & Control, v. 7, Dec. 1960, p. 33-35, 60.

Mathematical investigation of current flow patterns of line anodes fitted in cylindrical containers, taking into account the rounding off of anode edges which occurs during operation and is predicted by the re-entrant angle theorem. (R10d)

155-R. Corrosion-Inhibition of Aluminum-Zinc Alloys. J. Sundararajan and T. L. Rama Char. Corrosion Prevention & Control, v. 7, Dec. 1960, p. 38-39.

Corrosion rates of aircraft DTD 687 Al alloys and pure Al in NaOH solutions containing gum acaciae, agar agar, gelatin, dextrin and glue as inhibitors. Effect of current density and time on corrosion rate. 10 ref. (R10b; Al-b, Zn)

156-R. Corrosion Prevention. Pt. 4. T. Henry Turner. Corrosion Prevention & Control, v. 7, Dec. 1960, p. 40-42.

Corrosion resistance of galvanized steel, Sn coated metals, Ni alloys and stainless steel in rural and industrial atmospheres and in salt water spray. Applications in food and cutlery industry. (R3, R11j; Ni-b, SS, ST, 8)

157-R. Conditions for the Cathodic Protection of Metals. M. Pourbaix. Corrosion Prevention & Control, v. 7, Dec. 1960, p. 43-48.

Thermodynamic and kinetic conditions required for passivation of 18-8 stainless steel, Ag, Cu, Pb, Fe, Sn and Zn. 11 ref. (R10c; Ag, Cu, Fe, Sn, SS, Zn)

158-R. Anodic or Cathodic. P. de Waele. Corrosion Prevention & Control, v. 7, Dec. 1960, p. i-ii, viii.

Study of the fundamental differences between galvanic and electrolytic cells in relation to cathodic protection of metals. (R10d)

159-R. Corrosion Problems and Their Treatment. Pt. 4. Corrosion Prevention & Control, v. 7, Dec. 1960, p. iii-viii.

Galvanizing, painting, coating, spraying and cathodic protection of steel structures to prevent corrosion. Relation of surface preparation to adherance of coatings. (R10, L16, L26; ST, 4-57)

160-R. (German and French.) Corrosion of Semi-Finished Aluminum Products During Shipment and Storage. H. Greutert. Aluminium Suisse, v. 10, Nov. 1960, p. 282.

Corrosion caused by frictional contact between products during shipment by truck, where shaking of load is greater than in railroad cars and by condensation of water in cold weather when materials are transferred from means of transport or outside storage areas to heated interiors. Preventive measures. (R1f, R4, R10; Al-b)

161-R. Protection of Gas Plant and Equipment. Corrosion Technology, v. 7, Nov. 1960, p. 360-367.

Abstracts from British Gas Industry Corrosion Symposium covering principles and applications of cathodic protection, cast iron and corrosion in the gas industry, Cu and Al appliances, sprayed metal coatings (Zn, Al) and organic protective coatings. 3 ref. (R10, L23, W16; Al, CI, Cu)

162-R. Caustic Stress Corrosion Tests on Stainless Steel. E. Howells. Corrosion Technology, v. 7, Nov. 1960, p. 368-369.

Testing U-bend specimens composed of 347 stainless steel in a caustic-stress corrosion environment to produce cracking. Yield-strength determinations are made in NaOH solutions at 650° F. and 26,400-17,600 psi. for 36-600 hr. Concentration tests are made in NaOH solutions at 850-650° F. for 1-30 days. (R11s, Q23b; SS)

163-R. Corrosion Resistance of Austenitic Chromium-Nickel Stainless Steels and Some Nickel Alloys. R. Butcher. Ingenieur, v. 72, Nov. 11, 1960, p. 235-244.

Resistance to general surface attack, pitting, crevicing and galvanic, stress and intergranular corrosion and acid resistance of precipitation hardening and

austenitic alloys. Effect of composition on corrosion resistance. 7 ref. (R-general, 2-60; SS-e, Ni-b)

164-R. (German.) Experiences Gained With an All-Aluminum Road Bridge. Dietrich Fuchs. VDI-Zeitschrift, v. 102, Dec. 11, 1960, p. 1749-1752.

Corrosion resistance of a 25 tón AlMgSiF32 alloy bridge situated over a canal in an industrial area. (R3n, T26p; Al-b, Mg, Si)

165-R. Protective Films on Metals. W. J. Copenhagen. South African Industrial Chemist, Aug. 1960, p. 144-157.

Protection of outdoor and underground structures composed of steel, Al, Cu, Zn, Mg and Ti by metallic and nonmetallic films, phosphate coatings, silicate films, thermoplastic and thermosetting plastic films, rubber derivatives, inhibitive greases and wrappings and cathodic films. (R10, L-general; Al, Cu, Mg, ST, Ti, Zn)

166-R. (English.) Stress Corrosion Cracking of Austenitic Stainless Steels. Masaki Watanabe and Yoshihiko Mukai. Osaka University, Technology Reports, v. 10, Mar. 1960, p. 439-452.

Initiation and propagation of stress corrosion cracking of 304L, 308L and 18-8 austenitic stainless steel plates, rods and weldments in boiling solutions of 42% $MgCl_2$ investigated by microscopic observation and tensile tests at 20-200° C. after various heat treatments. 3 ref. (R1d, 9-72, Q-general; SS-e, 4-53, 7-51)

167-R. (Italian.) Corrosion Protection of Boilers and Tubing Systems for Water or Steam by Adding Hydrazine to the Water. Rassegna Chimica, v. 12, July-Aug. 1960, p. 41-42.

Deoxidation of water by hydrazine additions. Removal of already existing oxides from boiler and tubing walls is possible, because hydrazine passes easily from aqueous solution into steam. (R10, T26q; AD-r)

168-R. (English.) Electrochemical Polarization of Iron in Concrete. M. Takihara and K. Naito. Railway Technical Research Institute (Japan), Quarterly Report, v. 1, June 1960, p. 3-5.

Potential-time curves and polarization curves are obtained on steel wire at constant current in saturated solution $Ca(OH)_2$ and in cement mortars to simulate corrosion of reinforcing steel in concrete. Corrosion is influenced by passivity potential of Fe, dissolved oxygen concentration in uncombined H_2O, electrical conduction of concrete and surface oxide of the wire. (R6n; Fe, 4-61)

169-R. Minimizing Corrosion on Trucks Through Design. C. O. Durbin. Preprint no. 248A, Society of Automotive Engineers, 485 Lexington Ave., New York 17, N. Y. 1960, 4 p.

Truck designs which permit the accumulation of road dirt and de-icing salts from wheel splash accelerate corrosion of electrical components, wiring, body and chassis. Corrosion is reduced by insulating paints, minimizing exposure to wheel splash, sealing and, in the case of electrical components, installing positive ground terminals. (R10, T21e)

170-R. Water Resistant Coatings. Materials in Design Engineering, v. 53, Jan. 1961, p. 71-75.

Advantages and limitations of coal tar enamel, coal tar epoxy, epoxy resins, vinyl resins, chlorinated rubber, phenolic tung oil, concrete and Zn-Pb silicate coatings on steel and concrete in water exposures. Chemical, abrasion and weather resistance of various coatings. Applications. (R10g, R4, Q9n; ST, 8)

171-R. Nickel-Chromium Plated Aluminum Sheet. R. C. Spooner and D. P. Seraphim. Metal Finishing, v. 59, Jan. 1961, p. 37-41.

Corrosion resistance in industrial atmospheres of Ni-Cr coated 3S Al alloy panels prepared by zincate, phosphoric acid anodizing and Vogt processes. 23 ref. (R3n; Al, Ni, Cr, 4-58, 8-62)

172-R. New Theory for Rusting of Iron. Role of Hydrogen Ions in Promotion. Metallurgia, v. 62, Dec. 1960, p. 269.

Pure Fe wires are reacted with oxygen and water vapor at 835° F. The resulting corrosion is studied under an electron microscope to determine the effect of hydrogen ions in the

water vapor on the area of chemical reaction between the oxygen and Fe and consequently on the corrosion rate. (R1h, R4d; Fe, 4-61)

173-R. Oxidation of Titanium. Tor Hurlen. Institute of Metals, Journal, v. 89, Dec. 1960, p. 128-136.

Reaction of sheet Ti with oxygen at 300-700° C. at pressures of 10^{-2}-760 mm. Hg. Oxidation/time curves are determined by gravimetric and volumetric methods and oxidized specimens are studied by X-ray diffraction, electron diffraction, electron microscopy and metallographic technique. 35 ref. (R1h, M-general, 2-61; Ti, 4-53)

174-R. (Swedish.) The Microstructure of Scale on Iron and Steel. Sten Modin. Jernkontorets Annaler, v. 144, Nov. 1960, p. 799-812.

Effect of temperature and atmosphere on the formation of scale on rimmed and killed steels and electrolytic iron is measured at 1000-1300° C. in air and oil gas. 6 ref. (R2q, 2-61; Fe-a, ST)

175-R. (Swedish.) Structure of Scale and the Mechanism of Scale Formation During Heating of Steel. Sten Modin and Erik Tholander. Jernkontorets Annaler, v. 144, Nov. 1960, p. 813-833.

Electrolytic Fe and three carbon steels, one unkilled with 0.1% carbon and the other two Si-killed with 0.2 and 0.7% carbon respectively, are heated in air atmospheres to 1000-1300° F. to determine microstructure and adherence of the resulting scale. 8 ref. (R2q, M27; CN, Fe-a)

176-R. Corrosion Engineering: Cathodic and Anodic Protection of Metals. J. Sundararajan and T. L. Rama Char. Current Engineering Practice, v. 3, Oct. 1960, p. 7-16.

Preventing or minimizing corrosion in Fe and steel structures using Zn, Mg and Al sacrificial anodes. Use of an impressed current in conjunction with both permanent and consumable anodes. 41 ref. (R10d; Al, Mg, Zn, 17-57)

177-R. Anaerobic Corrosion Processes. Pipes and Pipelines, v. 5, Dec. 1960, p. 36.

Mechanisms of anodic solution of Fe and cathodic depolarization during anaerobic corrosion of steel pipes through the formation of elemental sulphur and H_2S. (R8; ST, 4-60)

178-R. Protective Coatings for Pipes. Pipes and Pipelines, v. 5, Dec. 1960, p. 44-45.

Protection of metals immersed in water by coal tar enamel, resin paints, phenolic paints and of buried steel pipe by spun glass reinforced coal tar enamel and cement mortar. Corrosion testing of interior protective linings for steel pipe. (R10g, L-general; 4-60)

179-R. Cupro-Nickel Sheathing Will Increase Utility Pole Life. Inco Nickel Topics, v. 14, Jan. 1961, p. 5.

Use of 90-10 Cu-Ni alloy sheathing of 20 mils thickness on wooden power line poles to improve resistance to salt water corrosion and marine borer attack. (R10e, R4b; Cu-b, Ni, 17-57)

180-R. How Good is Uranium as a Steel Addition. Canadian Machinery and Metalworking, v. 72, Jan. 1961, p. 55, 65.

Review of research on the effect of uranium additions on the corrosion resistance of carbon steels. Use of uranium to replace W and V additions in tool, open, rimming and effervescing steels. (R-general; ST, U, AD-n32)

181-R. Protection of Steel Parts by Vacuum Deposition of Cadmium. Machinery, v. 97, Dec. 21, 1960, p. 1411-1413.

Corrosion protection for high-tensile steel parts is obtained by a Cd coating deposited in vacuum, a method which avoids hydrogen or chlorine embrittlement which may result from acid pickling and electroplating. (R10, L25g, 1-73; ST, Cd)

182-R. New Theory for Rusting of Iron. Electrochemical Design, v. 4, Dec. 1960, p. 56.

Pure iron wires are reacted with oxygen and water vapor at 835° F. under controlled conditions to test the theory that hydrogen ions from the water vapor cause rusting. (R1h; Fe-a)

183-R. The Oxidation of Tin. Pt. 1. The Kinetics of Oxidation of Pure Tin and the Effects of Temperature and Oxygen Pressure. W. E. Boggs, R. H.

Kachik and G. E. Pellissier. Electrochemical Society, Journal, v. 108, Jan. 1961, p. 6-12.

Rates of oxidation of pure Sn are determined at 150-220° C. in oxygen at 0.003-500 mm. Hg below 1 mm. using a vacuum microbalance. (R1h, 2-61, 3-74; Sn)

184-R. The Oxidation of Tin. Pt. 2. The Morphology and Mode of Growth of Oxide Films on Pure Tin. W. E. Boggs, P. S. Trozzo and G. E. Pellissier. Electrochemical Society, Journal, v. 108, Jan. 1961, p. 13-24.

Oxide films formed during the oxidation of pure Sn, at 150-220° C. and 0.003-500 mm. Hg, are examined by electron microscopy and electron diffraction. Extraction replication techniques make possible the removal of intact oxide films as well as observation of the top and bottom surfaces of the film. Only one oxide, alpha-SnO, is formed under all conditions. 21 ref. (R1h, M21e, M22g; Sn)

185-R. The Oxidation and Corrosion of Zirconium and Its Alloys. Pt. 5. Mechanism of Oxide Film Growth and Breakdown on Zirconium and Zircaloy-2. B. Cox. Electrochemical Society, Journal, v. 108, Jan. 1961, p. 24-30.

Theories of the mechanism of film growth and breakdown on Zr and Zircaloy-2 are discussed in relation to data on corrosion of specimens in steam at 550-750° F. (R1h, R4d; Zr-b)

186-R. A Study of the Formation of Anodic Oxide Films on Uranium. Pt. 1. An Optical Reflectivity Method for Determining the Kinetics of Film Growth. A. E. Stebbens and L. L. Shreir. Electrochemical Society, Journal, v. 108, Jan. 1961, p. 30-36.

Multiple-beam interferametry and polarized light methods are used to measure the refractive and absorption index of uranium and its anodic oxide. The intensity of monochromatic light reflected normally from the surface of the specimen is measured during anodization, providing a continuous method of estimating film growth. 17 ref. (R1h, M21c; U)

187-R. Electrochemical Behavior of the Magnesium Anode. J. L. Robinson and P. F. King. Electrochemical Society, Journal, v. 108, Jan. 1961, p. 36-41.

Study of the anodic transient behavior of Mg in aqueous electrolytes. An explanation of the aqueous electrochemical behavior of Mg is developed, based on the concept that the inherent high reactivity of Mg is masked by a highly protective film of $Mg(OH)_2$. 17 ref. (R1j; Mg)

188-R. Electrochemical Behavior of Iron. Tor Hurlen. Acta Chemica Scandinavica, v. 14, July 1960, p. 1533-1554.

Use of a slow amperostatic technique to investigate the kinetics of $Fe/Fe^{++}aq$ electrodes in acid chloride solutions at 20° C. Measurement of rates of anodic dissolution and cathodic deposition of Fe and cathodic evolution of hydrogen as affected by pH and ferrous ion activity. 67 ref. (R1j, T1f; Fe)

189-R. Corrosion of Iron. Effect of pH and Ferrous Ion Activity. Tor Hurlen. Acta Chemica Scandinavica, v. 14, July 1960, p. 1555-1563.

Application of the theory of mixed potentials for corrosion processes to data obtained using $Fe/Fe^{++}aq$ and $H_2(Fe)/H^+aq$ electrodes in acid and alkaline solutions. Effects of pH and ferrous ion activity on the corrosion potential and corrosion rate of Fe. 34 ref. (R6, T1f; Fe)

190-R. Combined Cathodic Protection and Cleaning for Heat Exchangers. M. J. Olive. Corrosion, v. 17, Jan. 1961, p. 9-11.

Cathodic protection system is used to supplement water treatment; 20 condensors are protected by anodes at $800 per year, whereas cleaning and repair costs had been $2000 per year, a saving of $1200 in labor costs alone. Cathodic cleaning is cheaper than chemical cleaning. (R10d, W13b)

191-R. Pipeline Cathodic Protection Economics. Frank A. Therall. Corrosion, v. 17, Jan. 1961, p. 12-13.

Analysis of corrosion cost, estimated cost of metal loss on pipe, estimated cost of cathodic protection and comparison between costs of protecting bare and coated pipe. Comparison of installation and operation costs of conventional and deep groundbed facilities. (R10d, T26r)

192-R. Unusual Problems Encountered in Cathodic Protection of Miami Seaquarium. Edwin J. Tilton. Corrosion, v. 17, Jan. 1961, p. 16-18.

Problems involved working under water because tanks cannot be drained and on account of damage to anodes and their leads by large fish and sea turtles. Details of anodes, conduits and volume of impressed current. (R10d)

193-R. Automatic Control of a Platinum Anode Cathodic Protection System. Roy C. Francis and Leon S. Birnbaum. Corrosion, v. 17, Jan. 1961, p. 20-22.

Components used for automatically controlled system on a Navy ship using Pt-Pd alloy anodes, silver-silver chloride reference electrodes. (R10d)

194-R. Corrosion-Erosion of Sensitized AISI Type 304 Stainless Steel in a Thorium Dioxide-Uranium Trioxide Slurry. D. C. Vreeland. Corrosion, v. 17, Jan. 1961, p. 93-96.

Sensitized, nonpickled 304 stainless is not attacked intergranularly and exhibits about the same corrosion rate as as-received 304 stainless. Sensitized and pickled 304 is attacked at appreciably higher rates than as-received or than sensitized, nonpickled 304 stainless. 4 ref. (R6; SS)

195-R. Corrosion Studies of Aluminum in Chemical Process Operations. E. H. Cook, R. L. Horst and W. W. Binger. Corrosion, v. 17, Jan. 1961, p. 97-102.

Particular attention is given to Al alloys for handling 83% ammonium nitrate solutions at elevated temperatures. Applications of Al in handling and production of aliphatic acids, sour crude oil, amines, hydrogen peroxide, fuming nitric acid, liquids at cryogenic temperatures and high purity water. 23 ref. (R7, T29; Al, 17-57)

196-R. Inhibition of Corrosion of Commercial Aluminum in Alkaline Solutions. J. Sundararajan and T. L. Rama Char. Corrosion, v. 17, Jan. 1961, p. 111-116.

Corrosion rates for commercial Al containing 4% Mn and 3% Fe determined in sodium hydroxide solutions. Effect of agar-agar, gum acaciae, dextrin, gelatin and glue as inhibitors. 27 ref. (R10b; Al)

197-R. Methods and Experience in Underground Cathodic Protection. Pt. 1. Lead Sheathed Communication Cables. Oliver Henderson. Corrosion, v. 17, Jan. 1961, p. 117-118.

Controlled and forced drainage systems; use of rectifiers, Mg anodes and Mg ribbon to overcome anodic conditions. (T26r, R10d)

198-R. Methods and Experience in Underground Cathodic Protection. Pt. 2. Bare Steel Pipe Lines. L. H. West. Corrosion, v. 17, Jan. 1961, p. 118-120.

Methods for the detection of galvanic "hot spots" along bare steel pipe lines; correlation of these data with actual failures and galvanic anode installation. (R10d, T26r)

199-R. Methods and Experience in Underground Cathodic Protection. Pt. 3. Gas Transmission and Distribution Lines. P. P. Skule. Corrosion, v. 17, Jan. 1961, p. 120-121.

Review of various protection methods. (R10d, T26r)

200-R. Design for Prevention of Pipe Line Corrosion Based on Survey of Ground Potential Distribution. Shigeo Fukuta, Shin-Ichi Kondo, Nobuo Usami and Shigeki Sekimoto. Corrosion, v. 17, Jan. 1961, p. 122-124.

Specifications for pipe coatings, locations of cathodic protection or drainage systems and their current ratings. (R10d, T26r)

201-R. Cathodic Protection of Water Heaters. Platinum Metals Review, v. 5, Jan. 1961, p. 12.

Use of Pt protected Ti anodes in the cathodic protection of glass-lined domestic water tanks. (R10d, W3h; Ti, 17-57)

202-R. Polarization Studies of Mild Steel in Cultures of Sulphate-Reducing Bacteria. G. H. Booth and A. K. Tiller. Faraday Society, Transactions, v. 56, Nov. 1960, p. 1689-1696.

Cathodic and anodic polarization curves for steel electrodes in two cultures, containing organisms which cause anodic stimulation by sulphide ion production and anodic polarization by protective sulphide film formation. Discussion of results in relation to anaerobic corrosion of metals. (R1g; CN)

203-R. Corrosion of Cast Iron Pots Used for Fusing Caustic Soda. S. Rao Addanki, A. K. Lahiri and T. Banerjee. NML Technical Journal (National Metallurgical Laboratory, India), v. 2, Nov. 1960, p. 6-9.

Corrosion of cast iron crucibles containing caustic soda solution heated to 72-520° C., with oxidation, absorbtion of hydroxide by graphite and formation of sodium carbonate above 500° C. being the factors responsible for corrosion. (R6j; CI)

204-R. Behavior of Tin Alloy Coatings. S. C. Britton. Tin and Its Uses, no. 50, 1960, p. 6-8.

Evaluation of Sn, Sn on Zn and Sn-Zn alloy coatings on steel in relation to thickness and resistance to atmospheric corrosion. (R3; ST, Sn-b, 8)

205-R. Resistance of Tinplate to Rust and Corrosion. S. C. Britton and K. Bright. Tin and Its Uses, no. 50, 1960, p. 12-15.

Influence of the cold reduction process for manufacture of steel and the electrolytic method of Sn coating on the corrosion resistance of tinplate for the canning industry. (R-general; ST, Sn, 8-62)

206-R. Maintenance Painting of Structural Steel. S. C. Frye. Federation of Societies for Paint Technology, v. 32, Dec. 1960, p. 1642-1645.

Prevention of atmospheric corrosion in A-7 structural steel by wire brush and blast cleaning and by painting on a periodic schedule with inorganic and organic base paint. (R3, L10h, L26n; ST, 4-57)

207-R. Minimum Paint Thickness for Economical Protection of Hot Rolled Steel Against Corrosion. Walter Bosch. Federation of Societies for Paint Technology, v. 32, Dec. 1960, p. 1602-1610.

Atmospheric corrosion resistance of hot rolled steel panels coated with varying thicknesses of vinyl, alkyd, oil and phenolic base paints. (R3; ST, 4-53, 8-70)

208-R. (German.) Investigation on Oxidation of Reactor-Grade Zirconium. G. Saur, H. J. Laue and H. Borchers. Metall, v. 15, Jan. 1961, p. 9-18.

Oxidation of Zr bars and sheets in porcelain crucibles under static air at 200-900° C. with oxide formation determined by weighing. X-ray diffraction examination at 20 and 1100° C., hardness measurement and microscopic investigation of Zr oxide film to determine structure and film thickness. (R1h, M22g, M27; Zr, 4-53)

209-R. (German.) Europium and Its Alloys. R. Lesser and E. Erben. Metall, v. 15, Jan. 1961, p. 30-33.

Thermic and epithermic neutron absorption data for B, Cd, Hf, Gd, Sa and Eu, with emphasis on Eu. Investigation of ternary alloys of Eu with Mg, Al, Ti, Zr, Nb, Ta, Fe, Ni, Cu, Ag, Cd, Sn, Pb and Sb to determine a composition not susceptible to corrosion in water. Corrosion testing of Ag-Cd-Eu alloys containing 0-10% Eu in distilled water at 360° C. under 190 atm. pressure. Workability, mechanical properties and microstructure of Ag-Cd-Eu alloys. (R4, P18j, Q23q, Q-general, M27, M24c; Eu-b, Ag, Cd)

210-R. (German.) New Investigation on Stabilized, Nonstabilized, Acid Resistant Austenitic Steels. Herbert Krainer. Berg- und Huttenmannische Monatshefte, v. 105, Nov. 1960, p. 280-291.

Investigation of intercrystalline corrosion of austenitic CrNi steels by Hatfield and Huey tests and of stress corrosion in boiling 42% $MgCl_2$ solution. Influence of oxides, oxygen, carbon, Si and inhomogeneities on results of Huey test. (R2h, R1d, 2-60, R11; SS, Cr, Ni)

211-R. (Japanese.) On the Corrosion of Aluminium in Reactor Corrosion Test. Suco Nomura. Atomic Energy Society of Japan, Journal, v. 2, 1960, p. 19-26.

Effect of pile irradiation on corrosion of 2S Al in flowing water is studied under specific water, temperature, time, and irradiation conditions. (R4, 2-67, T11; Al)

212-R. Influence of Water Movement on Corrosion--Nonferrous Metals. N. V. Nowlan. Corrosion Technology, v. 7, Dec. 1960, p. 397-399.

Effects of low, medium and high rates of flow on corrosion of nonferrous metals in marine environments. Deposit and impingement attack and cavitation erosion. 6 ref. (R4; EG-a38)

213-R. Bibliographic Survey of Corrosion 1956, Publication no. 60-12. National Association of Corrosion Engineers,

1061 M & M Building, Houston 2, Texas. 1960, 248 p. $27.50.

Collection of 2136 abstracts of technical literature published during 1956 relating to corrosion and corrosion control arranged according to the NACE Abstract Filing Index. A subject index is also provided. (R-general)

214-R. Stress Corrosion of Ferrous Materials (Other Than Austenitic Stainless Steel). E. H. Phelps. Engineering Sciences, v. 7, no. 71, 1960, p. 2-4.

Susceptibility to stress corrosion of carbon, alloy, ferritic and martensitic steels in alkaline, nitrate, sulphide and other chemical environments. Effect of heat treatment and addition of inhibitors on stress corrosion. (R1d, R6, 2-64; AY, CN, SS)

215-R. (Japanese.) Corrosion and Corrosion Protection of Steel During Urea Dewaxing Processes. Yuzo Koga. Japan Oil Chemists' Society, Journal, v. 9, Nov. 1960, p. 611-614.

Investigation of corrosion inhibitors for preventing urea decomposition product attack of chemical processing equipment during extraction. Corrosion of mild steel test specimen is decreased by addition of 0.1% $(NH_4)_2HPO$ to the urea mixture. (R7j, R10b, T29; CN)

216-R. (Japanese.) Corrosion Testing of Condenser Tubes by Model Condenser at Osaka Power Station. Pt. 1. Takemichi Otsu and Shiro Sato. Sumitomo Light Metals, Technical Reports, v. 1, Oct. 1960, p. 260-383.

Specimen tubes composed of Al brass, Albroc, Alumi-Brass and 10% cupronickel are exposed to brackish sea water containing various N, Fe and Cu ions and organic compounds for periods to seven months. Data are given for corrosion rate and tensile properties of specimens and microstructure and composition of corrosion product. 5 ref. (R4b, Q-general; Cu-b, Al, Ni, 4-60)

217-R. Removal of Scale From Steel Rod by Stretching. K. Sachs and T. Pitt. Iron and Steel Institute, Journal, v. 197, Jan. 1961, p. 1-8.

Wire rods of different carbon contents are oxidized at 700-900° C. Scale is spalled off by stretching in a tensile machine, then weighed and screened. Influence of time and temperature of oxidation and carbon content of the rod on the amount of scale formed is determined by statistical techniques. (R1h, L10h, 2-60, 2-61; CN, 4-55)

218-R. Weapon in the Fight Against Rust. P. J. Macken. Copper, no. 10, Winter 1960, p. 24-25.

Alloying of structural Fe and steel with 0.2-0.3% Cu as a means of reducing the rate of rusting and increasing the life of the structure 50-100% without increasing cost. The Cu addition alters the characteristics of the rust which is formed to give a hard, abrasion resistant deposit. (R1h; Fe-b, ST, Cu, SGA-g, SGB-s)

219-R. Corrosion of Superheaters and Reheaters of Pulverized-Coal-Fired Boilers. Pt. 2. Carl Cain, Jr., and Wharton Nelson. American Society of Mechanical Engineers, Paper no. 60-WA-180, 1960, 7 p.

An 18 Cr, 8 Ni, Ti stabilized stainless steel component is corroded by molten complex alkali sulphates to determine effect of temperature on rate and methods for distinguishing liquid phase from gas phase attack. (R7k, 2-61, T26q; SS-d, Cr, Ni)

220-R. Some Corrosion Effects in Accelerated Cavitation Damage. W. C. Leith and A. Lloyd Thompson. Journal of Basic Engineering (ASME Transactions, Series D), v. 82, Dec. 1960, p. 795-807.

Corrosion and erosion of 410, 420, 430 and 302 stainless steels, cast iron, Al, red bronze, yellow brass and Al bronze by accelerated cavitation in a magnetostriction machine. Effects of distilled H_2O and tap H_2O flow velocity, temperature, chemical additives, pressure and vibration amplitude on hardness, metallurgical structure and corrosion-fatigue limit of the metal. 21 ref. (R2m, Q29n, M27, Q7; Al, Cu-b, CI, SS)

221-R. On Cathodic Protection in Cavitation Damage. M. S. Plesset. Journal of Basic Engineering (ASME Transactions, Series D), v. 82, Dec. 1960, p. 808-820.

Effect of cathodic currents on cavitation damage in mild steel, 4340 steel and 17-7 PH stainless steel specimens during cathodic protection testing in a

3% NaCl solution or buffered distilled H_2O (pH 8) using Pt anodes. 8 ref. (R2m; R10d; CN, SS)

222-R. An Experimental Study of Cavitation in a Mixed Flow Pump Impeller. G. M. Wood, J. S. Murphy and J. Farquhar. Journal of Basic Engineering (ASME Transactions, Series D), v. 82, Dec. 1960, p. 929-940.

Effect of cavitation on hydraulic performance of a mixed flow centrifugal pump impeller made from 316 stainless steel investment castings. Impeller is tested in a closed water loop containing degassed H_2O. 12 ref. (R2m, T7h; SS, 5)

223-R. Corrosion Resistance of Cast Nickel-Molybdenum-Iron Alloys. G. N. Flint. Metallurgia, v. 62, Nov. 1960, p. 195-200.

Corrosion and mechanical tests demonstrate influence of composition and heat treatment on hardness of Ni-Mo and Ni-Mo-Fe alloys and their corrosion resistance to strong acid media. 6 ref. (R6g, Q29n, 2-60, 2-64; Ni-b, Mo-b, Fe)

224-R. The Oxidation of Titanium in Oxygen at High Temperatures. J. Stringer. Acta Metallurgica, v. 8, Nov. 1960, p. 758-766.

The oxidation rate and nature of the oxidation product for alpha Ti oxidized in pure oxygen at 850-1000° C. are examined by thermodynamic analysis and X-ray diffraction methods. Gaseous diffusion of oxygen through the porous scale forming on the specimen is determined as the rate controlling process, the oxidation rate being at first parabolic and then linear. 11 ref. (R1h, 2-62; Ti-a)

225-R. The Effect of Pressure on the Second Stage Parabolic Rate in the Oxidation of Titanium. J. Stringer. Acta Metallurgica, v. 8, Nov. 1960, p. 810-811.

Linear dependence of the parabolic oxidation rate constant on oxygen pressure is accounted for in terms of the gaseous diffusion model for specimens of Ti and a Ti-4% Fe alloy oxidized at 910-1025° C. at varying oxygen flow rates. (R1h, 3-74; Ti-b)

226-R. Use of the Marker Method in Studying the Mechanism of Oxidation of Metals. S. Mrowec and T. Werber. Acta Metallurgica, v. 8, Nov. 1960, p. 819-821.

Factors influencing marker location and consequent accuracy of test results in oxidation studies, using Cu-S and Ag-S alloys and Fe as examples. Effect of diffusion, oxide layer structure and porosity, oversaturated solution formation and crack initiation. 14 ref. (R1h, Ni; Fe, Cu-b, Ag-b, S)

227-R. (German.) Corrosion Resistance, With Emphasis on Corrosion-Fatigue, of Gas-Nitrided Titanium Steels. M. Tomory-Ronay. Metalloberflache, v. 14, Dec. 1960, p. 360-365.

Corrosion fatigue tests in tap water, salt water spray and a climate chamber at 45° C. and 96% humidity on 600° C. NH_3-nitrided steels containing 0.11-0.48% C, 0.54-1.50% Ti, 0-1.4% Cr, 0-0.9% Al and 0-0.24% Mo. Microstructured investigation of nitrided case. Measurement of internal stresses by X-ray back reflection. (R13, M27, Q25; ST, Ti)

228-R. Aspect of the Corrosion of Mild Steel by Combustion Gases. T. K. Ross, A. J. Macnab and B. E. Leyland. Institute of Fuel, Journal, v. 33, Nov. 1960, p. 540-543.

Corrosion of mild steel specimens in mixtures of nitrogen and sulphur dioxide at 300-700° C. Effect of introducing hydrogen or oxygen on rate and nature of attack. (R6q, 2-61; CN)

229-R. Corrosion Engineers Meet in San Francisco. Metal Progress, v. 79, Feb. 1961, p. 146-148, 150, 152, 154.

Brief summaries of papers presented in the fall of 1960 at the 10th Annual Corrosion Conference. Topics covered include stress corrosion cracking of austenitic stainless steel, corrosion resistance of Fe-Al alloys in petroleum refinery operations and corrosion of Ni-base alloys in high-temperature nitrogen environments. (R-general)

230-R. Anti-Corrosion Measures for South African Gold Mines. F. P. A. Robinson. South African Mining and Engineering Journal, v. 71, Nov. 18, 1960, p. 1257-1260.

Resistance to corrosion by mine water of Al, Cu, stainless steel, vinyl-coated Al and carbon steel and Al and Zn-sprayed carbon steel. (R4g; Al, CN, Cu, SS, 8)

annealing of 18/8 CrNi steel in containers filled with furnace dust at 1000° C. Elimination of failures by decreasing Ni and increasing Cr content in the steel. 4 ref. (Q7; SS, Cr, Ni)

1122-Q. Velocity of Sound in Liquid Lead-Tin Alloys. Robert B. Gordon. Paper from "Physical Chemistry of Process Metallurgy". Pt. 1. v. 7. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1959, p. 461-470.

A constant, linear decrease in the velocity of sound with increasing temperature is found with no indication of presolidification phenomena. An anomaly appears in the dependence of the sonic velocity, its temperature coefficient and the adiabatic compressibility on alloy composition. (Q21f; Pb-b, Sn-b, 14-60)

1123-Q. (Japanese.) Studies on Heat Treatment of TiC 50 Ni-Cr-Co-Mo Cermets. Masataka Sugiyama and Hisashi Suzuki. Japan Institute of Metals, Journal, v. 25, Mar. 1961, p. 167-170.

Vacuum sintered specimens of 50% TiC, 30% Ni, 10% Cr and 5-9.5% Co, with 0.5-5% Mo substituted for Co, are tested and examined metallographically after vacuum heat treatment and quenching from 950-1280° C. Data are given for creep rupture, Vickers hardness, density, Curie temperature, ductility, microstructure and phase dispersion and stability as a function of heat treatment time and temperature. 4 ref. (Q-general, J-general, 1-73, 2-62; Ti-b, Ni-b, C, Cr, Co, Mo, 6-70)

1124-Q. (Japanese.) Relation Between Heat Treatment and Hardness and Torsional Strength of Ni-Cr Structural Steel at Room and High Temperatures. Pt. 5. The Austempering of Structural Special Steels. Hideji Hotta. Japan Institute of Metals, Journal, v. 25, Mar. 1961, p. 174-177.

Isothermal transformation curves for 20-900° C. are constructed from micro-vickers hardness measurement, dilatometry and micro-examination of specimens after tempering to 860° C., quenching and austempering from 300-600° C. Torsional strength, Charpy impact value and Rockwell, Brinell and Taniguichi-Yeda impact hardness are determined with transformation microstructures as a function of heat treatment temperature. 4 ref. (Q-general, J26p, N8g, 2-62, 2-64; AY, Ni, Cr)

1125-Q. (Japanese.) Tensile Strength of Ni-Al-W Alloys at High Temperatures. Takeshi Miyazaki and Yuki Shirakawa. Japan Institute of Metals, Journal, v. 25, Mar. 1961, p. 188-191.

Measurement of tensile strength and specific electric resistance from 20-800° C of vacuum annealed wire specimen of Ni alloy containing 0.73-4.15% Al and 0.89-5.10% W with Co additions. Tensile and resistance properties are improved with Al content increase of 3.50% and decrease with temperature increase. (Q27, P15g, 2-60, 2-62, 2-64, Ni-b, Al, W, Co, 4-61)

1126-Q. (Japanese.) Torsion Test as a Method for Measuring Toughness of Gray Cast Iron. Hiromu Tanimura, Kiichi Taniguchi and Yuji Nagamatsu. Japan Institute of Metals, Journal, v. 25, Mar. 1961, p. 198-201.

Comparative tensile, Charpy impact and torsion tests on gray iron specimens of various graphite structures and compositions for evaluating the agreement of the methods in measuring toughness as a function of resilience. Data are given for elongation, stress-strain relations, shear, elastic moduli impact values and tensile and torsional strength. 4 ref. (Q23s, Q1, Q-general; Ci-n)

1127-Q. (Czech.) Effect of Heat Treatment on the Fracture of Cast Steel. Adolf Lorenc. Slevarenstvi, v. 9, Apr. 1961, p. 132-138.

30KhN3MA steel and austenitic steel containing 12% Mn are cast into test pieces which are broken in the cast state, after austenitization followed by quenching, annealing at a temperature below the Ac_1 point or homogenization. Relationships between structure and fracture, previous heat treatment and ductility. 11 ref. (Q26, 2-64; ST, 5)

1128-Q. (Czech.) Effect of Molybdenum Sulphide on the Sliding Properties of Cast Iron Used in Thrust Bearings. V. Sevcik. Strojirenstvi, v. 11, Apr. 1961, p. 283-289.

Friction tests are carried out with the pair, cast iron-steel, using powdered MoS_2 or a suspension of MoS_2 as a lubricant. Effect of the lubricants on friction and wear of uncoated or phosphate coated cast iron. 12 ref. (Q9, 18-73, T7d; CI, ST, 17-57)

1129-Q. Stress Rupture Unit Uses Electron Beam Heating. Al Donlevy and Jack K. Y.

Hum. SAE Journal, v. 69, July 1961, p. 60-61.

Electron beam heating is used as a heat source in stress rupture testing of Cb, Mo, Ta, W and their alloys at 2400° F. Work must be done in a high vacuum and, at present, 2200° F. is the low test temperature limit. (Q3q, X24f; Cb, Mo, Ta, W)

1130-Q. (Japanese.) Influence of Temperature History on Creep. Shuji Taira, Masateru Ohnami and Mizune Sakato. Japan Society of Mechanical Engineers, Transactions, v. 27, Apr. 1961, p. 373-380.

Transient stage creep in 0.15% carbon steel as dependent on strain increment and change in internal yield stress, recovery or aging, as a function of fluctuation and related time intervals in thermal cycling tests in tension from 300-900° C. 13 ref. (Q3s, 2-62, 3-68; CN-g)

1131-Q. (Japanese.) Creep Under Step-Wise Temperature Cycling. Shuji Taira, Masateru Ohnami and Syoichi Sugioka. Japan Society of Mechanical Engineers, Transactions, v. 27, Apr. 1961, p. 380-386.

Creep curves are determined for low-carbon steel, 18-8 stainless and 13% chromium steel as a function of time, cycle and temperature for thermal cycling tests from 450-650° C. under fixed tensile stress. A theoretical analysis is made in terms of a "mechanical equation of state in solids". 5 ref. (Q3, 2-62, 3-66; ST)

1132-Q. (Japanese.) Accelerated Stage Creep and Creep Rupture Under Temperature Cycling. Shuji Taira and Masateru Ohnami. Japan Society of Mechanical Engineers, Transactions, v. 27, Apr. 1961, p. 387-395.

Influence of thermal cycling from 600-700° C. on creep and rupture life, embrittlement and elongation of 318 stainless steel specimens. 20 ref. (Q3s, 2-62; SS-e)

1133-Q. (Japanese.) Dynamic Creep and Fatigue of an 18-8 Molybdenum-Columbium Steel at Elevated Temperature. Shuji Taira, Ryoichi Koterazawa and Susumu Kaji. Japan Society of Mechanical Engineers, Transactions, v. 27, Apr. 1961, p. 396-402.

Creep and fatigue test data for specimens at 650° C. are correlated with data for rupture and hardness tests and electron microscopy examination. Precipitation hardening characteristics are related to strength values as a function of alternating stress. 11 ref. (Q3, Q7, Q-general, N7, 2-62, 3-66; SS-e)

1134-Q. (Japanese.) Effect of Notch on Fatigue Strength of Steel at Elevated Temperature. Minoru Kawamoto, Tsuneshichi Tanaka and Mitsunori Miyake. Japan Society of Mechanical Engineers, Transactions, v. 27, Apr. 1961, p. 403-410.

Rotating bending fatigue tests on 0.21% carbon steel with various circumferential notches to determine the effect of test temperature, strain rate and notch sharpness on the fatigue strength and notch factor. Relation of fatigue strength to temperature induced blue brittleness. 12 ref. (Q7c, Q23s, Q26s, 2-62, 3-68; CN-g)

1135-Q. (Japanese.) Effects of Holding Time on the Thermal Fatigue of 18-8 Columbium Steel. Noritada Kato. Japan Society of Mechanical Engineers, Transactions, v. 27, Apr. 1961, p. 410-423.

Effect of variation in the temperature cycle, holding time, stress amplitude and cyclic plastic strain on thermal fatigue strength of specimens tested at constant mean temperature of 350° C. for varied temperature ranges and times. Influence of composition on hot ductility. 5 ref. (Q7j, Q23p, 2-62, 3-67, 3-68; SS-e)

1136-Q. (Czech.) Heat Resistant 15Cr35Ni3W Steel. Josef Vodsedalek. Hutnicke Listy, v. 16, Apr. 1961, p. 270-275.

Steel containing 0.04-0.08% C, 0-1.23% Mn, 0-0.63% Si, 0-0.008% P, 0-018% S, 14.53-15.33% Cr, 33.49-37.16% Ni, 2.05-3.8% W, 0-1.24% Mo, 0.45-1.77% Ti, 0.12-6.88% Al and 0-0.21% B is mechanically tested at 20-800° C. after solution annealing at 1150° C. and subsequent aging at 700-750° C. for 20-2000 hr. Creep strength as a function of Ti and Al contents, microstructures. 7 ref. (Q3m, 2-60, 2-61, 3-71; SS, SGA-h)

1137-Q. (Swedish.) Yield Stress of Carbon and Low-Alloyed Tube Steels for Pressure Vessels From 20-500° C. B. Lofblad, E. Lowgren and L. Roslund. Jernkontorets, Annaler, V. 145, Mar. 1961, p. 143-172.

Investigation to obtain a basis for calculation of values for standardized carbon and low-alloyed tube steels including ST 35, ST 45, 1 Cr/0.5 Mo and 2.25

of the USSR., Proceedings, Physical Chemistry Section, v. 130, Jan-Feb. 1960, p. 25-28.

Mechanisms of retarding dissolution of 18-8 stainless steel in H_2SO_4 by chloride, bromide and iodide ions in terms of their promotion of passivation. (R6g, R10b; SS)

249-R. (Translation-ConBur.) The Effect of pH on the Electrode Potential of Stainless Steel. Yu. M. Korobin and I. B. Ulanovskii. Journal of Applied Chemistry of the USSR., v. 33, Jan. 1960, p. 162-165.

Test pieces are polished, degreased, dried and tested at pH 8.5-1 in. sea water; change in pH is found to shift the electrode potential, a process which can be eliminated or reduced by controlling chemical composition. 5 ref. (R4b, P15m, 2-66; SS)

250-R. (Translation-ConBur.) The Effect of Polarization on the Corrosion Cracking of an Alloy of the System Mn-Cu-Ni. Journal of Applied Chemistry of the USSR., v. 33, Jan. 1960, p. 167-171.

Effect of polarization on rate of corrosion cracking, shape of the cracks, electrode potential and alloy expansion in 0.5 N NaCl solution. 5 ref. (R6k, 9-72, P17g; Mn-b, Cu, Ni)

251-R. (Translation-ConBur.) Effect of Ultrasound on the Anode Formation of Lead Dioxide. F. I. Kukoz and M. F. Skalozubov. Journal of Applied Chemistry of the USSR., v. 33, Jan. 1960, p. 172-176.

Effect of ultrasound with a frequency of 1.4 Mc and an intensity of 1-5 w/cm^2 on the anode charge curve and the passivation process. The depolarizing action of the ultrasound is connected with its interspersing action and the change in concentration state in the near anode layer. 16 ref. (R10c, 1-74; Pb, 14-68)

252-R. (Translation-ConBur.) The Effect of Chlorine on the Corrosion of Metals by Hydrochloric Acid. Kh. L. Tseitlin and Yu. I. Sorokin. Journal of Applied Chemistry of the USSR., v. 33, Jan. 1960, p. 157-161.

Corrosion rates of Pb, steel, Ag and a Ni-Mo alloy are measured in HCl as a function of temperature (20-100°C.) and free chlorine content. 11 ref. (R6g, 2-60; Ag, Mo-b, Ni-b, Pb, ST)

253-R. (Translation-ConBur.) Oxidation of Steel During Firing of Primary Enamel Coating With and Without Boron. G. I. Belyaev. Journal of Applied Chemistry of the USSR., v. 33, Jan. 1960, p. 91-97.

Effect of enamel composition, firing conditions and oxygen potential on the corrosion of Fe during firing. Effect of alkaline earth oxide additions on the acidity of molten enamels which must be increased to decrease boiling off and burning through of coatings. 18 ref. (R1h; ST, 8-71)

254-R. (Translation-ConBur.) Effect of Temperature and Microgeometry of Metal Surfaces on the Rate of Atmospheric Corrosion. L. M. Lapides. Journal of Applied Chemistry of the USSR, v. 33, Feb. 1960, p. 392-396.

Cu-Zn and Cu-Al pure metal pairs with polished or sand blasted surfaces are covered by a thin layer of 0.01 N NaCl solution and corroded at 5-50° C. to show the effect of temperature and surface condition. 9 ref. (R3, 2-61, M28; Al, Cu, Zn)

255-R. (Translation-ConBur.) Corrosion of Stressed Steel in Nitric Acid. V. A. Titov. Journal of Applied Chemistry of the USSR., v. 33, Feb. 1960, p. 397-402.

Corrosion rate of stressed steel wires in 1-60% HNO_3 at 17-22° C. and the variation of the electrode potential are measured under alternating stress. Micrographic analysis is used to study the development of corrosion fatigue cracks. 4 ref. (R1e, R6g, P15m, 3-66; ST, 4-60)

256-R. (Translation-ConBur.) The Influence of Cathodic Polarization on the Stability of Tantalum in Hydrochloric Acid. Kh. L. Tseitlin, V. A. Strunkin and E. K. Revazov. Journal of Applied Chemistry of the USSR., v. 33, Feb. 1960, p. 342-345.

A negative potential is applied to a Ta specimen immersed in a pure 20% solution of HCl to determine crack susceptibility as a function of current density and temperature. 9 ref. (R6g, Q26, 2-61; Ta)

257-R. Intergranular Corrosion of Austenitic Steels Containing 24% Cr and 19% Ni. Vladimir Cikal, Pavel Grobner, Jaroslav Jizek and Rudolf Pospisil. Metal Treatment and Drop Forging, v. 28, Jan. 1961, p. 5-13.

Electron-microscope study of 24 Cr-19 Ni steel austenitized at 1100° C. and precipitation heat treated at 550-850° C. for 5-810 hr. Thermochemical stability of chromium carbide; kinetics of the precipitation of the carbides and distribution and morphology of carbides in the steel. 17 ref. (R2h, N8r, J27, J22, M21e; SS-e)

258-R. (German.) Anticorrosive Effect of the Gaseous Inhibitor Dichan (Dicyclohexylamine Nitrite) on Iron in Neutral Solutions. K. Schwabe and G. Muller. Zeitschrift fur Physikalische Chemie, v. 215, Mar-Apr. 1960, p. 143-157.

Electrode potential measurements are made on structural steel electrodes (0.08% C, 0% Si, 0.44% Mn, 0.12% P and 0.048% S) in Dichan, $NaNO_2$ and dicyclahexylamine solutions at 25° C. and under continued access of atmospheric air to determine effect of inhibiting agent. (R10b; ST, SGB-s)

259-R. (German.) Formation and Growth of Pitting Spots on Passive Iron Electrodes. G. Herbsleb and H.-J. Engell. Zeitschrift fur Physikalische Chemie, v. 215, Mar-Apr. 1960, p. 165-175.

Spot formation and growth on open-hearth steel sheet electrodes (0.065% C) in H_2SO_4 is investigated for varying Cl-ion concentrations by photographic methods and electrode potential measurements. Results are interpreted in terms of a time law and resistance polarization. (R6g; Fe)

260-R. (German.) Influence of Alloying Elements on Electro-Chemical Properties of Chemically Resistant Steels. H. J. Angell and T. Ramchandran. Zeitschrift fur Physikalische Chemie, v. 215, Mar-Apr. 1960, p. 176-184.

Evaluation of passivation and dissolution current densities by current density and potential measurements on cast steels (18% Cr, 10% Ni and 27% Cr, 4% Ni) containing 0-6% Cu in 1-2 n H_2SO_4 at 80 and 50° C. Influence of Ni, Cu and Mo on passivation and chemical resistance of steel. (R10c, P15, 2-60; ST)

261-R. (German.) Some Construction Rules for Protection Against Natural Corrosion. J. Elze. Konstruktion, v. 12, Dec. 1960, p. 485-489.

Protection of Al, Cu, Zn and steel structural materials is achieved by electroplating, anodic oxidation, galvanizing and lacquering. (R10g, L-general; Al, Cu, ST, Zn, SGB-s)

262-R. (German.) Reaction of Iron With KCl-$TiCl_2$ Melts in Titanium Vessels. K. Blankenstein. Technische Mitteilungen Krupp, v. 18, Aug. 1960, p. 9-18.

Experimental production of protective Ti^{2+} coatings for Fe and investigation of the diffusion of Ti into Fe, using Swedish muck bars in salt melts in forged Ti vessels under an argon atmosphere at temperature to 1800° C. Chemical and radiographic investigation of the diffusion phases, evaluation of diffusion constants and activation energy and determination of the microhardness and corrosion rate. 22 ref. (R2r, N1, M-general, P13a; Fe, Ti)

263-R. The Corrosion of Condenser Tubes. D. G. Kingerley. British Chemical Engineering, v. 6, Jan. 1961, p. 20-25.

Identification, mechanism and prevention of corrosion of nonferrous Al brass and Cu-Ni condenser tubes. Corrosion types considered are intercrystalline penetration, corrosion-erosion, deposit attack and dezincfication. 19 ref. (R4; Cu-b, Al, Ni, 4-60)

264-R. Do You Need Cathodic Protection? Herbert C. Van Nouhuys. American Gas, Journal, v. 188, Feb. 1961, p. 29.

Required cathodic protection for newly installed coated gas line distribution systems. Table classifies pipe coatings with respect to the average current density required to produce cathodic protection in high resistivity soils. (R10d, T26r)

265-R. Physical Metallurgy of Refractory Metals (The Effect of Oxygen Solution on the Oxidation of Niobium). R. A. Meussner and C. T. Fujii. Report of N. R. L. (Naval Research Laboratory) Progress, Dec. 1960, p. 31-35. $1.25. (Available as PB 161288 from U. S. Office of Technical Services, Washington 25, D. C.)

Oxidation rates and nature of oxide products of low oxygen and oxygen presaturated Cb sheet specimens exposed

to dry oxygen at 700-1000° C. are examined by weight gain measurements and by X-ray diffraction powder and metallographic analysis. 5 ref. (R1h, 2-60; Cb, EG-d37)

266-R. Corrosion Mechanism (The Effect of Nonadherent Corrosion Products on Localized Attack of Steel Exposed to Aqueous Media at Elevated Temperature). M. Krufeld and M. C. Bloom. Report of N. R. L. (Naval Research Laboratory) Progress, Dec. 1960, p. 35-39. $1.25. (Available as PB 161288 from U. S. Office of Technical Services, Washington 25, D. C.)

Mild steel specimens covered with corrosion products, Fe_3O_4, gamma-FeOOH and alpha-Fe_2O_3, in localized area are subjected to corrosion in aqueous solutions of distilled H_2O, 0.001 molar NaOH and 4% H_2O_2 at 600° F. for 4 wk. Accelerated corrosive attack is attributed to an oxygen concentration cell. (R1h; CN)

267-R. Catastrophic Oxidation of Stainless Steel in the Presence of Lead Oxide. John C. Sawyer. Metallurgical Society of AIME, Transactions, v. 221, Feb. 1961, p. 63-67.

VMS 201 stainless and 21-12 stainless specimens coated with various (21) oxides are heated in air and PbO vapor at 1300° F. to show that similar reactions occur during oxidation of stainless steel in the presence of MoO_3, V_2O_5 and PbO. The three named oxides accelerate the normal oxidation process by chemically altering the normally protective oxide film formed on the base metal. 15 ref. (R2b; SS)

268-R. (Italian.) Choice of Corrosion-Resistant Alloys. Fonderia, v. 9, Nov. 1960, p. 501, 503.

Corrosion properties of steels, ferrous alloys and Ni alloys. (R-general; Fe, ST, Ni-b)

269-R. Zirconium Alloys: Corrosion Resistance and Strength Are Improving. R. J. Van Thyne. Materials in Design Engineering, v. 53, Feb. 1961, p. 10-13.

Data are given for corrosion resistance in hot water, acid, alkali and chloride media and for tensile strength at 1200° F. (R-general, Q27a, 2-61; Zr-b)

270-R. Deposits and Corrosion From Combustion Gases. N. Y. Kirby. Australasian Engineer, Dec. 1960, p. 60-62.

Mechanisms of boiler pitting and corrosion caused by ash, alkali, phosphate, sulphate and sulphuric acid which form during combustion of coal containing mineral impurities. (R7d, T26q)

271-R. Passivity and Corrosion Resistance of Titanium and Its Alloys. N. D. Tomashov, R. M. Altovsky and G. P. Chernova. Electrochemical Society, Journal, v. 108, Feb. 1961, p. 113-119.

Measurement of corrosion resistance of Ti and its binary and ternary alloys containing minor amounts of Cr, Mo and Pd in boiling and 18° C. sulphuric and hydrochloric acids. Electrochemical properties of the elements and alloys are determined and correlated with the corrosion data. 27 ref. (R6g, R1a; Ti, Cr, Mo, Pd)

272-R. Oxidation of Copper Between 250 and 450° C. and the Growth of CuO "Whiskers". E. A. Gulbransen, T. P. Copan and K. F. Andrew. Electrochemical Society, Journal, v. 108, Feb. 1961, p. 119-123.

Oxidation of Cu at low pressure is studied to determine crystal structure of the oxide film and size and surface density of the CuO whiskers formed. 24 ref. (R1h; Cu)

273-R. The Oxidation of Tin. Pt. 3. The Mechanisms of Oxidation of Pure Tin and Their Dependence on Time and Oxygen Pressure. William E. Boggs. Electrochemical Society, Journal, v. 108, Feb. 1961, p. 124-129.

Discussion of kinetic data and reaction mechanisms as indicated by data. 20 ref. (R1h, 3-67, 3-74; Sn)

274-R. The Oxidation and Corrosion of Zirconium and Its Alloys. Pt. 6. The Mechanism of the Fission Fragment Induced Corrosion of Zircaloy-2. B. Cox, K. Alcock and F. W. Derrick. Electrochemical Society, Journal, v. 108, Feb. 1961, p. 129-133.

Mechanisms of corrosion of Zircaloy-2 in high-temperature uranyl sulphate solutions as influenced by irradiation. 19 ref. (R6k, 2-67; Zr-b)

275-R. The Effect of Surface Preparation on Oxide Films on Cr and Fe Alloys. D.

Coplan, Alma Harvey and M. Cohen. Electrochemical Society, Journal, v. 108, Feb. 1961, p. 134-138.

High-temperature oxidation rate of Fe, Cr, Fe-26% Cr, Fe-11% Cr and Fe-26% Cr-0.5% Si is studied as a function of surface preparation. 10 ref. (R1h, 9-71; Cr-b, Fe-b)

276-R. An Apparatus for the Continuous Measurement of Dissolution of Metals. T. S. de Gromohoy and L. L. Sheir. Institute of Metal Finishing, Transactions, v. 36, 1958-1959, p. 153-158.

An apparatus which measures the increase in the electrical resistance of a metal wire as its cross-sectional area decreases during dissolution in a corrosive solution is applied to the measurement of the dissolution rate of pure Al wire during chemical cleaning in a 75% phosphoric acid-nitric acid solution. 6 ref. (R2g, L12g, 1-54; Al, 4-61)

277-R. An Electron-Microscopic Study of the Corrosion of Electroplated Nickel. Rolf Weil. Plating, v. 48, Feb. 1961, p. 163-167.

Panels of low-carbon steel, Ni plated in Watt's bath with various addition agents, are subjected to one year outdoor corrosion tests. Pitting effects on grain boundaries, crevices, pores, crystal orientation and brightness are observed by electron microscopy. (R3, L17, M21e; CN-g, Ni)

278-R. The Nature, Cause and Effect of the Porosity in Electrodeposits. Fielding Ogburn and Wm. H. Roberts. Plating, v. 48, Feb. 1961, p. 168-169.

Radial flow corrosion currents associated with pitting corrosion and corrosion at pores or pits in plated coatings are detected by observing the motion of electrolytic solutions surrounding a magnetic field. Method is illustrated on Ni plated steel in H_2SO_4. (R11a, R6g; ST, Ni, 8-62)

279-R. Relative Corrodibility of Zinc and Steel in Unpolluted Atmospheres. K. S. Rajagapavan and G. Ramaseshan. Journal of Applied Chemistry, v. 10, Dec. 1960, p. 493-496.

Atmospheric conditions under which Zn corrodes faster than mild steel are investigated with reference to well defined temperature and humidity conditions and in relation to the period of exposure. 14 ref. (R3, R11k; ST, Zn)

280-R. The Nature of the Oxide Film Formed on Stainless Steel Immersed in Concentrated Hydrogen Peroxide. J. Diederichsen. Journal of Applied Chemistry, v. 10, Dec. 1960.

Rate of formation, composition and stability of the resulting oxide film are investigated by chemical analysis and electrometric methods. (R1h; SS)

281-R. Role of Hydrogen in the High Temperature Corrosion of Zirconium and Its Alloys. Pt. 2. Oxidation of Unalloyed Zirconium in Steam and in Oxygen. D. R. Silvester and J. M. Wanklyn. Journal of Applied Chemistry, v. 10, Dec. 1960, p. 511-520.

Comparison of film capacities and weight gains of specimens of Kroll Zr exposed to steam and dry oxygen at 325°. Comparisons of oxidation rates at late stages of oxidation show discrepancies in relation to the initial oxidation rates. 13 ref. (R1h, R4d; Zr)

282-R. Galvanic Cells. Donald F. Taylor. Corrosionomics, v. 5, May 1960, p. 2-3.

Study of hydrogen embrittlement and corrosion of Ta and galvanic reactions of Ta couples in H_2SO_4 using Pt, graphite, Pb and silicon iron. Results show that in H_2SO_4 Ta is cathodic to clean Pb and clean Si but anodic to Pt and graphite. (R1a, R6g; Ta)

283-R. (Japanese.) Corrosion of Mild Steel in Alkaline Solutions at High Temperature and Pressure. Jiroh Katoh and Tadashi Arai. Chemical Society of Japan, Journal, Industrial Chemistry Section, v. 63, Sept. 1960, p. 1576-1579.

Composition and structure of mild steel corroded in various kinds of alkalies at pH 11 are determined by microscopic and diffraction methods. Mechanism is explained by thermodynamic calculations. (R6j, M27, M21, M22; CN)

284-R. A Simple Stress-Corrosion Cracking Test for Copper Alloys. D. H. Thompson. Materials Research & Standards, v. 1, Feb. 1961, p. 108-111.

Test methods for determining the resistance of Cu alloys to stress corrosion cracking in moist ammoniacal atmosphere based on determining the per cent of relaxation in tear drop shaped loops of alloys in NH_4OH vapors at 20° C. 6 ref. (R11s, R6j; Cu-b)

285-R. Developments in the Protection of Magnesium. J. K. Wilson and F. D. Waldron-Trowman. Light Metals, v. 24, Feb. 1961, p. 38-39.

Corrosion testing of Mg alloy castings and panels which have been anodically cleaned with fluoride, anodized and surface sealed with sprayed epoxy resin coatings. (R-general; Mg-b, 5, 8-67)

286-R. Engine Corrosion. Light Metals, v. 24, Feb. 1961, p. 51.

Corrosion resistance of Al alloy (0-3.5% Cu, 0-7.0% Si, 0-0.35% Mg and 0-6.5% Zn) cylinder heads in contact with cast iron blocks as affected by various antifreeze compositions. (R7f, T21b; Al, 17-57)

287-R. (Japanese.) Mechanism of the Dissolution of Passive Nickel in Sulphate Solutions. Norio Sato and Go Okamoto. Japan Institute of Metals, Journal, v. 24, Nov. 1961, p. 735-739.

Effect of concentration of H, Ni and sulphate ions on the dissolution rate in acidic and alkaline solutions. The observed dissolution decreases with the increase of pH in the acidic region, independent of Ni or sulphate ion concentration and increases with increasing pH in the alkaline solution. 12 ref. (R2g; Ni)

288-R. (Japanese.) Study of the Surface States of Tungsten Powder. Oxidation of Tungsten Powder. Shigetoshi Takayanagi. Japan Institute of Metals, Journal, v. 24, Nov. 1960, p. 756-760.

The surface oxidation of tungsten powder is studied at 150-400° C. and 10-400 mm. Hg pressure, using a vacuum microbalance technique with BET method and electron microscopy analysis. Data are given for oxidation rate and kinetics and oxide film growth, structure and composition, as a function of particle size and specific surface area, doping, heat treatment and oxygen pressure. 13 ref. (R1h; W, 6-68)

289-R. Gases in Steel (Rates of Corrosion of Some Structural Alloys in Molten Sodium Sulphate). A. J. Pollard and A. J. Edwards. Report of NRL (Naval Research Laboratory) Progress, Jan. 1961, p. 29-30.

Weight losses as a function of time are determined for Armco iron and 304, 416, 24% Cr-3% Al and 20% Cr-20% Ni stainless steel to assay susceptibility to corrosion by oil-ash deposits (containing sodium sulphate) in marine boilers. (R6m, N15e; Fe-a, SS)

290-R. A Corrosion-Proof Metal Body... Why Not Now? Herbert D. Van Sciver. SAE Journal, v. 69, Mar. 1961, p. 38-39.

Effects of the forming process on the mechanical properties of corrosion resistant materials such as 1010 steel, stainless steel and Al are shown to illustrate the plausibility of producing a corrosion proof automobile body. Spot and arc welding methods for assembly of sheet steel and Al. (R-general, Q-general, K1, K3n, T21a; Al, SS, 17-57)

291-R. Coatings Protect Materials From Flight Heat. A. G. Lucas. SAE Journal, v. 69, Mar. 1961, p. 78-79.

Use of static and ablatine coatings to protect graphite and Mo and other refractory metals from oxidation during aerodynamic heating. Mo is protected by $MoSi_2$ and graphite by a composite of graphite, $MoSi_2$ and graphite by a composite of graphite, $MoSi_2$ and TiB. Ablatine coatings in use include phenolic-asbestos, epoxy-fiberglass and molded Teflon. (R1h; EG-d37, 8)

292-R. (French.) Study by Diffraction and by Electron Microscope of the Oxidation and Carburization of Thin Aluminum Films. J. J. Trillat, L. Tertian and M. Bonnet-Gros. Revue de l'Aluminium, v. 37, Oct. 1960, p. 1115-1123.

The kinetics of the oxidation of Al, the transformation into gamma Al_2O_3 and the formation of C_3Al_4 are observed for vapor deposited Al and C-Al thin films on an inert parlodian supporting membrane inside a microscope or diffractograph after heating. 11 ref. (R1h, N-general, M21e, M22h; Al-b, C, 14-62)

293-R. The Corrosion Behaviour of Non-ferrous Metals in Sea Water. T. Howard Rogers. Institute of Marine Engineers, Transactions (Canadian Div. Supplement), no. 2, Dec. 1960, p. 31-37.

Survey of the sea water corrosion resistance of Al alloys, brasses, bronzes, cupro-nickel alloys, Cu-Ni-Fe alloys, gun metals, Cu, Monels and Sn and Pb alloys. (R4b; Al-b, Cu-b, Ni-b, Pb-b, Sn-b)

294-R. (French.) Influence of Pressure on Oxidation of Iron and Steels by Carbon Dioxide. Michel Colombie. Comptes Rendus, v. 251, Dec. 19, 1960, p. 2938-2940.

Oxidation experiments at 535° C. on carbon steels, steel with 3% Cr and on Fe under partial pressure of CO_2 between 1-16 kg. per cm^2. 8 ref. (R1h, 3-74; Fe-b, ST)

295-R. High Temperature Vanadium-Columbium. Corrosion Technology, v. 8, Jan. 1961, p. 1-2.

Vanadium-base alloys containing 20-50% Cb are tested in oxidizing and reducing environments at 700-1200° C. under 12,000-100,000 psi. of pressure to determine high-temperature strength, corrosion resistance in water, stress-rupture properties and ultimate tensile strength. (R4, Q27, Q3m, 2-61; V-b, Cb)

296-R. Influence of Water Movement on Corrosion of Ferrous Materials. G. Butler. Corrosion Technology, v. 8, Jan. 1961, p. 5-7.

Discussion of the relationship between movement of the water and the thickness of the boundary diffusion layer is illustrated by corrosion of Fe in oxygenated water under cathodic control. 10 ref. (R4; Fe-b)

297-R. Columbium Base Alloys. Corrosion Technology, v. 8, Jan. 1961, p. 7.

Oxidation resistance of Cb-base alloys containing 28-20% W, 10-7% Ti, 3% Al, 3% V, 3% Mo, Cr and Zr is measured at 2550-1500° F. and 40,000 psi. pressure. (R1h, 2-61; Cb-b, W, Ti)

298-R. Corrosion Resistance in Chemical Plant. S. Baker. Corrosion Technology, v. 8, Jan. 1961, p. 8-12.

Data are given for mechanical and electrical properties and corrosion resistance in water, acids, alkali salts and organic substances of Cu and its alloys. (R4, R6, R7, Q-general, P15; Cu-b)

299-R. Corrosion and Incrustation From Use of Blast Furnace Gas in Gas Turbines. Corrosion Technology, v. 8, Jan. 1961, p. 13-14.

Pilot plant corrosion testing in steelworks of gas turbines made of austenitic steel. Determination of corrosion losses and incrustation produced by hot blast furnace gas at inlet temperatures of 263-750° C. (R7g, W11m; SS, 17-57)

300-R. Automobile Body Corrosion Control Problems. Harold A. Webster. Corrosion, v. 17, Feb. 1961, p. 9-12.

Corrosion control measures that can be taken through use of more resistant materials, improvement of body design, protective coatings, treatment of environment (inhibitors for de-icing salts) and continued maintenance by car owners. 5 ref. (R-general, T21)

301-R. A Close Look at Some Auto Corrosion Problems. Corrosion, v. 17, Feb. 1961, p. 14-18, 22-24.

Analysis of problems connected with Cr trim on cars, cooling and exhaust systems. Measures taken by automobile manufacturers to minimize corrosion; air pollution and de-icing salt exposure as principal factors in causing corrosion. 25 ref. (R-general, T21)

302-R. Some Corrosion Problems of Missiles in Silo Storage. Leo E. Gatzek. Corrosion, v. 17, Feb. 1961, p. 28-29.

Problems in controlling atmosphere inside the silo and the missile to prevent corrosion; corrosion control measures and techniques used to measure corrosion. 15 ref. (R-general, T24e)

303-R. Design Change Beneficial in Reducing Domestic Hot Water Tank Corrosion. P. J. Sereda. Corrosion, v. 17, Feb. 1961, p. 30-32.

Temperature is an important factor affecting corrosion. Cu piping has an influence on corrosion, especially if a Cu dip tube is used inside the tank. Results from tests using corrosion inhibitors are inconclusive probably because the concentration of about 10 ppm. is too low. (R10b)

304-R. Chloride Stress Corrosion Cracking of Stainless Steel Deaerator Trays. N. D. Groves, L. R. Scharfstein and C. M. Eisenbrown. Corrosion, v. 17, Feb. 1961, p. 75-76.

Trays fabricated from Type 201 and Type 329 stainless steels failed by chloride stress corrosion cracking after several months's service. Cracking of 201 stainless is very severe. Annealing after welding the 329 stainless trays would improve resistance to cracking. (R1d; SS)

305-R. Influence of Reactor Radiation on the Oxidation of Niobium. J. V. Cathcart and F. W. Young. Corrosion, v. 17, Feb. 1961, p. 77-79.

No measurable change is detected either in the rate of oxidation or in the nucleation process associated with the oxidation of Cb. On the basis of estimates of the extent of radiation damage in thin oxide films, it is concluded that the damage resulting from irradiation at currently available neutron flux levels is unlikely to change the number of oxide lattice defects sufficiently to produce a significant change in the oxidation rate. 4 ref. (R1h; Cb)

306-R. Corrosion Effects of Liquid Fluorine and Liquid Oxygen on Materials of Construction. F. W. Fink and Earl L. White. Corrosion, v. 17, Feb. 1961, p. 80-82.

Although both of these elements are very reactive, most of the common metals are sufficiently resistant for many applications. The compatability of these oxidizers is discussed in relation to alloys of Fe, Ni, Cu, Al, Mg, Ti and Zr. 9 ref. (R6; Fe, Ni, Cu, Al, Mg, Ti, Zr)

307-R. Practicality of Establishing Threshold Values to Eliminate Stress Corrosion Failures in Metals and Alloys. Henry Suss. Corrosion, v. 17, Feb. 1961, p. 83-88.

Review of the significance of many factors which could affect the stress corrosion behavior of materials. These include such items as method of test, slight variations in test environment or metallurgical structure of the metal, accelerated corrosion attack (galvanic or crevice), residual stress and nature of corrosion attack. 31 ref. (R1d)

308-R. Effect of Flow Rate on the Galvanic Corrosion of Low Carbon Steels in Sea Water. Eino Uusitulo. Corrosion, v. 17, Feb. 1961, p. 89-92.

Study by recording current-potential curves and measuring the potentials, current strengths and weight losses of galvanic cells formed by the steels in pairs. Corrosion of the steels forming galvanic cells is up to 15 times as great at high rates of flow as in standing sea water. 9 ref. (R1a; CN-g)

309-R. Accelerated Corrosion Test for Tin Plate in Grapefruit and Other Juices. P. R. Carter and T. J. Butler. Corrosion, v. 17, Feb. 1961, p. 94-98.

Use of an alloy-tin couple (ATC) test. Effect of Sn (II) additions to the electrolyte, of the source of the Sn anode, variations in sample and anode area, resistance of the external and internal circuit and of scratches on the sample surface. 8 ref. (R6g; ST, Sn, 8)

310-R. Corrosion Resistance of Electrolytic Tin Plate. Pt. 1. Electrochemical Studies of Tin, Iron-Tin alloy and Steel in Air-Free Acid Media. G. G. Kamm and A. R. Willey. Corrosion, v. 17, Feb. 1961, p. 99-106.

Failure is described in terms of tin-steel potential and current relationships. Potential and polarization measurements indicate that inhibition by Sn^{++} is not a plating-out process. Polarization studies identify the Fe-Sn alloy as an important factor in tin plate corrosion. 26 ref. (R-general; ST, Sn, 8)

311-R. Corrosion Resistance of Electrolytic Tin Plate. Pt. 2. The Alloy-Tin Couple Test - a New Research Tool. G. G. Kamm, A. R. Willey, R. E. Reese and J. L. Krickl. Corrosion, v. 17, Feb. 1961, p. 106-114.

New 20 hr. electrochemical test which measures the current flowing between pure Sn and Sn plate detinned to the alloy layer, coupled in deaerated grapefruit juice, shows good correlation with rate of detinning in grapefruit juice test peaks. 13 ref. (R11m; ST, Sn, 8)

312-R. Influence of Area of the Steel Component on Behavior of a Tin-Steel Couple. S. C. Britton and K. Bright. Corrosion, v. 17, Feb. 1961, p. 120-124.

Tinned steel specimens with the coating removed from selected areas are corroded in anearobic citric acid. Even with very small areas of exposed steel some dissolution of Fe occurs, but the rate of dissolution increases sharply when the steel area is increased sufficiently to cause the current density on it to fall below an effective protective value. 7 ref. (R6g; ST, Sn, 8)

313-R. A Comparison of Stainless Steel and Zirconium for Use in Pressurized

Water Reactor. Charles J. Baroch. Mines Magazine, v. 51, Feb. 1961, p. 17-22.

Examination of the density, ductility, thermal conductivity, yield strength and corrosion rate of Zircaloy-2 and stainless steel claddings over cores composed of U^{235}, UO_2B^{10}, B_4C_2 and stainless steel in pressurized water reactors. 16 ref. (R4, Q23, P11h, P10a, T11g; SS, Zr)

314-R. Cast Iron and Corrosion in the Gas Industry. H. H. Collins. Chemistry & Industry, Jan. 14, 1961, p. 32-38.

Influence of environment, temperature and galvanic current on graphitic corrosion of flake and nodular irons of both pearlitic and ferritic composition. Influence of composition on growth rate caused by cyclic heating. (R2p, 2-60; CI)

315-R. (Japanese.) Stress-Corrosion Cracking of Austenitic Stainless Steels. Pt. 1. Effect of Shot-Peening on Stress-Corrosion Cracking of Austenitic Stainless Steels. Hideo Togano and Kazuo Osato. Japan Institute of Metals, Journal, v. 24, Dec. 1960, p. 786-790.

The effectiveness of compressive stress left by shot-peening in cancelling out harmful tensile stresses on metallic surfaces is tested for reducing stress corrosion susceptibility in stainless. Specimens immersed in boiling MgCl, H_2SO_4 and HNO_3 are bend tested with measurement of residual stress and metallographic analysis of cracking. 9 ref. (R2d, G23n, Q25h; SS-e)

316-R. (Japanese.) Effect of Gamma Rays on the Corrosion of 347 Stainless Steel in 5% Sulphuric Acid. Takashi Mukaiho, Keichi Oshima, Hisashi Mori and Taiji Nagatari. Japan Institute of Metals, Journal, v. 24, Dec. 1960, p. 829-833.

Corrosion rate and activation energy of specimens in 5% H_2O_4 solution, with or without H_2O_4 addition, at 70-97° C. after irradiation with CO-60 gamma rays. The acceleration of corrosion is believed to be caused by the reducing molecules which have a higher diffusion coefficient and a higher reactivity than the oxidizing one. 7 ref. (R6g, 2-67; SS)

317-R. (French.) Relation Between the Oxygen Content Dissolved in Salt Solutions and the Current Requirement for the Cathodic Protection of Steel. Arne Windfeldt. Corrosion et Anticorrosion, v. 9, Jan. 1961, p. 15-23.

Inhibition of cathodic polarization of steel by the oxygen dissolved in NaCl solution and in sea water. Linear relation between the aggressiveness of the salt solutions and the oxygen content. Formula for protection of steel by electric current in this type of environment. 11 ref. (R10d)

318-R. Aluminum in Marine Environments. R. I. Lindberg. American Society of Naval Engineers, Inc., Journal, v. 73, Feb. 1961, p. 133-138.

Corrosion testing of painted and unprotected marine assemblies composed of various Al alloys in sea water. Comparison with Cu, Pb, Zn and steel. (R4b, R10, T22; Al-b, 17-57)

319-R. How to Prevent Stress-Corrosion Cracking of Copper Alloys. David H. Thompson. Chemical Engineering, v. 68, Feb. 6, 1961, p. 130, 132, 134.

Annealing, relief annealing, protective coating and alloying techniques for preventing corrosion in Cu alloys. (R10, R1d; Cu-b)

320-R. (German.) Corrosion Protection by Pigments. J. D'Ans and V. Groope. Deutsche Farbenzeitschrift, v. 15, Feb. 1961, p. 51-55.

Corrosion of deep drawn iron sheets in solutions of chromates of varying solubility in water (Pb, Ba, Zn, Cr, Cd and Ca chromate) is investigated by weighing and potential and resistance measurements. Protective effect of chromates; influence of anions. (R6k; Fe, 4-53)

321-R. (German.) Sub-Surface Rusting of Lacquered Steel. J. A. W. van Laar. Deutsche Farbenzeitschrift, v. 15, Feb. 1961, p. 56-67.

Method and apparatus for testing of cold rolled lacquered steel sheet by scratching of lacquer and exposure to corrosive media. Corrosion tests in normal climate, sea climate, fresh water submersion test, salt water spray test. Standardization of measurement; reaction mechanism; means of prevention. (R11j, R3, R4a; ST, 8-70)

322-R. (German.) Paint With Lead Powder. Bernd Schwegmann. Deutsche Farbenzeitschrift, v. 15, Feb. 1961, p. 72-73.

Corrosion protection by fine Pb powder pigment dispersed in binders such as linseed oil, resin and caoutchouc. Use in shipbuilding and for Fe constructions. Economics. (R10, T22)

323-R. (French.) High Alloyed Stainless Steels and Alloys. J. Bourrat. Metallurgie et la Construction Mecanique, v. 92, Nov. 1960, p. 867-878.

Steels containing Cr, Ni, Mo and Cu are corrosion tested in 0-50% H_2SO_4 at 20-100° C. Corrosion resistance of these steels, Ni base alloys and Hastalloy B, C, D and F in hydrochloric acid. (R6g; SS, Ni-b)

324-R. (French.) Low-Alloy Corrosion Resistant Steels. E. Herzog. Metallurgie et la Construction Mecanique, v. 92, Nov. 1960, p. 915-929, 959.

Effect of small additions of Cu, Al and Ni on the corrosion behavior of a steel containing 3.5% Cr in industrial and sea atmospheres, sea water, NaCl solution. Stress corrosion in various salts and concentrated alkalis at 20-200° C. (R3, R4b, R11j, 2-60; AY)

325-R. (French.) Heat Resistant Steels and Alloys. R. Neyret. Metallurgie et la Construction Mecanique, v. 92, Nov. 1960, p. 931.

Ferritic steels, austenitic-ferritic steels, austenitic steels and superalloys are mechanically and creep tested at 600-1200° C., or exposed to the action of air, argon-nitrogen, carburizing, CO, combustion atmospheres and furnace atmospheres containing vanadium. (R3, Q3; SS, SGA-h)

326-R. (German.) Intercrystalline Decomposition of Aluminum Materials. E. Nachtigall. Radex Rundschau, Dec. 1960, p. 373-388.

Corrosion testing at up to 300° C. temperature and high pressure (up to 30 atm.) of annealed and recrystallized or worked high-purity Al and Al alloy specimens in distilled water, water vapor or salt solutions. Influence of alloy additions, anodic coating, annealing and pH of corroding solution on intercrystalline decomposition of Al. (R11, R2h; Al-b)

327-R. A Technique for Investigating Reactions Between E. P. Additives and Metal Surfaces at High Temperatures. F. T. Barcroft. Wear, v. 3, Nov-Dec. 1960, p. 440-453.

Thin mild steel, Fe, Ag and Cu wires are heated electrically to 600° C. while immersed in an extreme pressure oil. Rate and extent of reaction deduced from change of resistance of wire with time. 10 ref. (R7e; Ag, CN, Cu, Fe, 4-61)

328-R. (French.) Electrochemical Study of the Cathodic Corrosion Reaction. J. M. Defranoux. Societe Francaise des Electriciens, Bulletin, v. 1, Oct. 1960, p. 672-677.

Separate study of the cathodic reaction during metal corrosion by the polarization curve on a noncorroding electrode (Pt). Corrosion resistance of 18-8 Mo stainless steel in nitric acid and passivity of stainless steel. 17 ref. (R10d, R-general; SS)

329-R. Study of the Corrosion of Metals in an Aqueous Medium by Tracing the Polarization Curves With a Potentiostat. Ph. Berge. Association Technique, Bulletin, 1960, p. 487-504.

Polarization curves obtained by a potentiostat of stainless steel in sulphuric acid, of AG7 alloy under stress, of metal couples in an electrolyte and of the resulting electrochemical corrosion. 17 ref. (R11m, R1, R6; Mg-b, SS)

330-R. Comparative Stress-Corrosion Behavior of Some High Alloy Steels. P. P. Snowden. Iron and Steel Institute, Journal, v. 197, Feb. 1961, p. 136-141.

Testing of austenitic, ferritic and martensitic corrosion-resisting steels in solutions of $MgCl_2$, NaCl, NaOH and KOH superheated up to 650° C. and under a stress of 13 tons per in^2. Microscopic examination to determine effect of composition on stress-corrosion cracking resistance. (R11s, 2-60; SS)

331-R. Special Coating Solves Corrosion Problem. R. E. Gackenbach. Southern Power & Industry, v. 79, Mar. 1961, p. 52.

Corrosion of carbon steel by a polymer solvent used in the manufacture of spin dope is prevented by application of Kolmetal, a mixture of finely pulverized Al in a plastic base, to all the structural members and process tanks exposed to the solvent or its vapors. (R10g, R7, T29; CN)

332-R. Bimetallic Heat Exchanger Tubes. Southern Power & Industry, v. 79, Mar. 1961, p. 64-65.

Stress corrosion testing of bimetallic tubes with 304 stainless on the inside and deoxidized tubes on the outside. Outside environment is brackish river water and inside hot corrosive gases. (R11s, R4f, R6, W13b; Cu, SS, 4-60)

333-R. (French.) Oxidation and Carburization of Thin Aluminum and Beryllium Films. Jean-Jacques Trillat, Lea Tertian and Monique Bonnet-Gros. Memoires Scientifiques de la Revue de Metallurgie, v. 57, Nov. 1960, p. 845-851.

Oxidation of thin Al and Be films heated under different residual air pressures and observed by diffraction and electronic microscope. Formation of the carbides C_3Al_4 and Be_2C by reciprocal diffusion between a carbon film and a thin layer of metal deposited on it. 8 ref. (R1h, N-general; Al, Be, 14-62)

334-R. (French.) Enrichment in Impurities Occurring During Oxidation of Steels Studied by Radioactive Tracers. Ch. de Beaulieu, M. Cagnet and J. Moreau. Memoires Scientifiques de la Revue de Metallurgie, v. 57, Nov. 1960, p. 863-875.

The accumulation at the metal-oxide interface of Cu, Co, Cr, W, As, P and S impurities during the oxidation of steel or a binary ferrous alloy at elevated temperatures and the kinetics of the oxidation process are studied by irradiating the etched surface and preparing autoradiographs or by using S^{35} as a tracer. 14 ref. (R1h, 1-59, 3-69; ST)

335-R. (Italian.) Corrosion Resistance of SG Cast Iron. Lelio Orsini. Macchine, v. 15, Nov. 1960, p. 1065-1077.

Application of pearlitic, pearlitic-ferritic, ferritic, martensitic-sorbitic and austenitic irons in the oil and chemical industries. Corrosion behavior. (R6, R7, T29; CI-r, 17-57)

336-R. (Translation-Brutcher no. 4449.) Season Cracking of Brass in Ammonia. A. N. Kondrat'ev. Metallovedenie i Obrabotka Metallov, Dec. 1958, p. 45-52.

Nature of season cracking of brass specimens held for long periods under various stresses and propagation of cracks in them. Intergranular corrosion in cylindrical brass specimens; effect of Cu concentration in cupriammonium solution on solubility of brass. (R1d; Cu-n)

337-R. Marine Fouling and Corrosion. Inco Corrosion Reporter, v. 7, Jan. 1961, 14 p.

Effects of macro and micro-organisms in seawater on the corrosion resistance of Cu-Ni alloys, admiralty brass and Al brass. Methods of preventing fouling and corrosion. (R4b; Cu-b)

338-R. Food Manufacture Raises Severe Corrosion Problems. J. W. Selby. Corrosion Prevention & Control, v. 8, Jan. 1961, p. 29-31, 34.

Corrosion of food containers, building walls and equipment such as metal trolleys used in food storage and food preparation. Corrosion tests of standard 18/8 Cr-Ni and of 18/8/3 Ni-Cr-Mo stainless steel partially immersed in lemon squash at 37° C. Corrosion problems in jam boiling and in manufacture of pickles. (R7n, T29p; SS)

339-R. Corrosion in Breweries. R. H. Chandler. Corrosion Prevention & Control, v. 8, Jan. 1961, p. 32-34.

Corrosion in brewery equipment, normally of Cu, caused by steam, condensation, organic compounds and alkaline cleaning agents. Prevention and control by replacing Cu with corrosion resistant materials, including stainless and other steels, inert inorganic materials and Al; by cathodic protection and by coating with epoxy resins and rubber and metallic paints. (R-general, R10, L26, T29p; Cu, ST, Al, 17-57)

340-R. Aluminum and Corrosion. A Review of Progress in 1960. F. C. Porter. Corrosion Prevention & Control, v. 8, Jan. 1961, p. 37-43.

Review of 1960 publications on research and technology covering corrosion mechanisms such as fretting, stress corrosion and pitting; atmospheric and aqueous corrosion; acid and alkali attack; and corrosion by contact with other materials. Survey of protection and control, including cathodic protection, anodizing, chemical conversion coatings, painting and vitreous enamelling. Application of Al coatings in corrosion protection systems. (R-general, L-general; Al)

341-R. Corrosion Resistance of Electropolished Surfaces. H. E. Zentler Gordon

and S. C. Boyle. Corrosion Technology, v. 8, Feb. 1961, p. 35-39.

Corrosion testing of Al, Cu, brass, Zn, carbon steel, stainless steel, stainless iron and Fe-Cr alloy samples after mechanical or electropolishing to determine effect of thin, passive oxide films on inorganic chemical corrosion resistance. 33 ref. (R6, L10, L13p; Al, Cu-b, CN, Fe-b, SS, Zn)

342-R. Stainless Steel--Corrosion Resistance in Chemical Plant. E. Ineson. Corrosion Technology, v. 8, Feb. 1961, p. 45-49.

Density, specific heat, thermal expansion and conductivity, electrical resistance and acid corrosion resistance of 18/8 austenitic steel, 13% Cr iron, 13% Cr martensitic stainless and 18/10 + Mo steel. (R6g, P-general; SS)

343-R. New Cast Stainless Alloy Adopted in Nuclear Sub. Inco Nickel Topics, v. 14, Feb. 1961, p. 1, 4.

Galvanic, crevice and stress corrosion resistance and mechanical strength of a precipitation-hardening cast nickel containing stainless alloy, CD4MCU (25-27% Cr, 4.75-6% Ni, 2.75-3.25% Cu, 1.75-2.25% Mo). Application in torpedo breech doors where strength and corrosion resistance are essential. (R1, Q-general, T22; SS, Ni, SGA-g, 17-57)

344-R. (English.) Oxidation of Germanium. Tadashi Yanagihara, Goro Shimaska and Hiroko Suzuki. National Research Institute for Metals, Transactions (Japan), v. 2, Feb. 1960, p. 126.

Powder specimens of Ge are oxidized at 450-930° C., with measurement of oxide film formation and growth by thermobalance and X-ray and electron diffraction methods. Reactive kinetics are determined as a function of temperature, particle size and the protective nature of the films formed. (R1h, M-general, 2-61; Ge, 6-68)

345-R. Corrosion in Alkaline Environments. Paul J. Gegner. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 1-30.

Corrosion resistance of Al alloys, cast iron, steel and other metals in soda ash, caustic soda, caustic potash, ammonia, alkaline sulphides and amines as it affects their application in chemical processing equipment. (R6j, T29; Al, CI, ST, 17-57)

346-R. The Use of Iron, Carbon Steel and Alloy Steel in the Chemical Industry. R. J. Schmitt. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 31-59.

Study of the corrosion resistance of iron and steel used in the chemical industry as affected by composition, heat treatment, corrosive environments and use of corrosion prevention techniques such as inhibition, protective coating and cathodic protection. (R6, R7, R10, T29; CN, Fe, ST)

347-R. Corrosion by Sulphuric Acid. Walter A. Luce. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 63-81.

Corrosion resistance of steel, cast iron, Pb, stainless steels, stainless alloys, chlorimets, Hastelloys, noble metals, Ni alloys and Cu alloys in H_2SO_4 at various compositions and temperatures. (R6g; CI, Cu-b, Ni-b, ST)

348-R. Copper and Its Alloys, Classes and Types, Corrosion Characteristics and Applications. A. W. Tracy. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 83-97.

Discussion of types of corrosive attack on Cu alloys, including dezincification, pitting, stress-corrosion cracking, corrosion fatigue and galvanic corrosion. Data are given for composition, mechanical properties and corrosion resistance in various chemical environments. (R1, R6, R7; Cu-b)

349-R. Nickel and High-Nickel Alloys. W. Z. Friend. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 99-117.

Corrosion resistance of Ni and Ni-Cu, Ni-Cr, Ni-Mo, Ni-Mo-Cr, Ni-Cr-Mo-Cu, Ni-Fe-Cr-Mo and Ni-Si alloys in various chemical media. Applications in chemical processing equipment. (R6, R7, T29; Ni-b, 17-57)

350-R. Corrosion From Chlorine--Its Major Compounds and Their Homologs. L.

W. Glukman. Paper from "Short Course on Process Inudstry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 119-142.

Corrosion resistance of Ni, Mg, Al and their alloys, Ti, stainless steel, Au and other metals in Cl, F, Br, I and their acids and salts. (R6, R7h, T29; Al-b, Au, Mg-b, Ni-b, SS, Ti)

351-R. Corrosion by Acetic Acid. J. A. Manning. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 143-151.

Corrosion rates of Al and Al alloys, Cu and Cu alloys, stainless steels, Ni alloys and various nonmetallic materials in acetic acid. Comparison of materials as to applicability for tanks, heating coils, piping, valves and pumps in contact with acetic acid. (R7b, T29; Al-b, Cu-b, Ni-b, SS)

352-R. Solving Refinery Corrosion Problems With Aluminum. Ellis D. Verink, Jr., and Frank B. Murphy. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 155-159.

Corrosion resistance of Al and its alloys as it affects applications in refinery heat exchangers, tankage, piping and cryogenic equipment. 15 ref. (R7a, T29; Al-b)

353-R. Resistance of Aluminum Alloys to Underground Corrosion. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 161-177.

Pitting, galvanic and stray current corrosion resistance of unprotected or coated Al sheet or pipe buried for various times. 10 ref. (R1, R8; Al, 4-53, 4-60)

354-R. Corrosion Studies of Aluminum in Chemical Process Operations. E. H. Cook, Jr., R. L. Horst, Jr., and W. W. Binger. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 179-191.

Corrosion resistance of Al alloys exposed to ammonium nitrate, aliphatic acids and anhydrides, alcohols, sour crude oils, amines, ammonia, acrylonitrite, propellants and water. 25 ref. (R4, R6, T29; Al-b)

355-R. Use of Tantalum, Columbium, Titanium and Zirconium in Chemical Environments. W. K. Boyd, J. D. Jackson and F. W. Fink. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 193-213.

Data are given for corrosion resistance in acids, alkalies, salts, organic materials, gases and liquid metals. 28 ref. (R6, R7; Cb, Ta, Ti, Zr)

356-R. Materials for Handling Hydrofluoric, Nitric and Phosphoric Acids. L. R. Honnaker. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 215-234.

Corrosion rates of various Ni and Al alloys, Ti, stainless steels and other metallic and nonmetallic materials are given as functions of temperature and acid concentration. 21 ref. (R6g, 2-61, T29; Al-b, Ni-b, SS, Ti, 17-57)

357-R. Designing Corrosion Out of Process Equipment. W. H. Burton. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 259-272.

Design suggestions for steel pressure vessels, pipelines, heat exchangers and storage tanks which provide maximum corrosion resistance. (R10g, 17-51, T29; ST, 17-57)

358-R. Corrosion Testing. Mars G. Fontana. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 319-352.

Surface preparation, cleaning and stress, crevice, galvanic and other corrosion testing techniques for Al, Mg, Ni, steels, brasses and other metals and alloys. (R11; Al, Cu-n, Mg, Ni, ST)

359-R. Notes on Measurement and Evaluation of Various Modes of Corrosion Damage. F. Prange. Paper from "Short Course

on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 407-419.

Comparison of modes of corrosion damage, including pitting, liquid level line damage, vapor space damage, weld seam corrosion, corrosion-erosion, blistering, amalgamation, dezincification, hydrogen embrittlement and stress corrosion cracking. (R-general)

360-R. Waterside Corrosion in Steam Plants. Charles J. Schafer. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 421-428.

Methods of preventing corrosion of boilers by dissolved oxygen, acids and alkalies contained in the feedwater. (R4c)

361-R. Selection and Proper Use of Stainless Steel for Process Industries. W. G. Renshaw. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 429-448.

Mechanisms of intergranular corrosion, pitting and stress corrosion cracking in various stainless steels. Use of inhibition and passivation to prevent corrosion. (R1, R10; SS)

362-R. (German.) Investigation of Corrosion of Reinforcing Steel in Mortar and Concrete of Varying Calcium Chloride Content. Siegfried Reinsdorf. Silikat Technik, v. 11, Oct. 1960, p. 478-483.

Corrosion of 15-10 mm. diameter reinforcing steel rods (ST 37 steel) in mortar or concrete test plates of varying $CaCl_2$ content after storing in wet sand or dry air for 180 days to 5 yr. Influence of CaCl content on corrosion. (R6k; ST)

363-R. (German.) Oxidation of Zirconium at Elevated Temperatures and Structure of Primary Oxide Films. E. S. Sarkisov, N. T. Cebotarev, A. A. Nevzorova and A. I. Zverkov. Kernenergie, v. 2, Oct-Nov. 1960, p. 928-931.

Oxidation of hot rolled, annealed and chemically polished Zr disks in oxygen and water vapor at 150-800° C. at atmospheric pressure and various oxidation times. X-ray diffraction investigation and X-ray analysis to evaluate structure and composition of formed oxides. Oxidation mechanism. (R1h, M22g; Zr)

364-R. (French.) Steels and Refractory Alloys Applied in the Construction of Case Hardening Furnaces. Gilles Pomey. Revue du Nickel, v. 26, Nov-Dec. 1960, p. 147-156.

Composition and structures of Fe-Ni-Cr, Ni-Cr, Cr-Ni-W-Fe, Cr-Ni-Co-Fe, Cr-Fe and Cr-Al-Fe alloys. Corrosion behavior in air, CO_2, CO, H, steam, N, CH_4, C_3H_8 and NH_3 and corrosion structures. 8 ref. (R-general, M27, W27; Fe-b, Co, Cr, Ni, W, ST, 17-57)

365-R. (Russian.) Device for Study of Scale Formation on Molten Steel Surface. L. E. Plotinskiy. Zavodskaya Laboratoriya, Dec. 1960, p. 1422-1424.

Method for determination of scale formation based on principle of increased heat radiation caused by addition of oxidants on the surface of melted steel. Registration of the changes in radiation by apparatus comprising a telescope, thermoelements and a potentiometer. (R1h, 1-54, X9; ST)

366-R. The Corrosion Resistance of Titanium Metal. Atlas Steel News, v. 15, Feb. 1961, p. 7-8.

Oxide film formation and maintenance on Ti as it affects corrosion resistance in oxidizing, neutral and reducing atmosphere. Production of electrically generated films on Ti by anodic treatment. (R-general, L19; Ti)

367-R. Corrosion Problems and Their Treatment. Pt. 6. Corrosion Prevention & Control, v. 3, Feb. 1961, p. 4-8.

Problems of soil corrosion of varied steel structures. Corrosion in new and existing structures. Use of coating and cathodic protection in corrosion control. (R8, R10; ST, 4-57)

368-R. Corrosion Causes Trouble in Instantaneous Water Heaters. Corrosion Prevention & Control, v. 8, Feb. 1961, p. 37-38, 42.

Condensation of sulphuric acid produced by combustion of gas on heat exchanger fins causes corrosion problems. (R6g, W13b)

369-R. Water Supply Causes Attack on Equipment. Corrosion Prevention & Control, v. 8, Feb. 1961, p. 38-39, 42.

Corrosion of iron boilers, galvanized tanks, Cu and Al equipment by supply water. (R4c, T26; Al, Cu, Fe, 17-57)

370-R. Packaging Requires Special Protective Techniques. Corrosion Prevention & Control, v. 8, Feb. 1961, p. 46-47.

Use of grease, oil and other organic films, strippable coatings and vapor phase inhibitors to give temporary corrosion protection. (R10)

371-R. (Translation-ConBur.) Anodic Process Accompanying the Corrosion Cracking of Metals. N. D. Tomashov and N. I. Isaev. Academy of Sciences of the USSR, Proceedings, Physical Chemistry Section, v. 132, May-June 1960, p. 433-436.

Study of corrosion cracking of MA 2-1 Mg alloy in a NaOH solution as affected by electrochemical factors such as anodic polarizability and concentration of anodic zone at the apex of the corrosion crack. (R6j, 9-72; Mg-b)

372-R. (Translation-ConBur.) The Anodic Passivation of Zinc in Alkaline Solutions. T. I. Popova, V. S. Bagotskii and B. N. Kabanov. Academy of Sciences of the USSR, Proceedings, Physical Chemistry Section, v. 132, May-June 1960, p. 445-447.

Effects of polarization, cathodic current density, stirring rate and composition of the solution layer next to the electrode on the passivation of Zn electrodes in KOH solution. (R10c; Zn)

373-R. (Translation-ConBur.) Mechanisms in Protection of Magnesium From Oxidation. M. S. Beletskii and M. I. Erusalimskii. Academy of Sciences of the USSR, Proceedings, Physical Chemistry Section, v. 132, May-June 1960, p. 477-479.

Electron diffraction studies of Mg, Cb and Mg-Cb alloys following pulverization in a vacuum and oxidation by air. Effect of electron shell structure, temperature and exposure time on oxidation rate and film thickness. (R1h; Mg)

374-R. Low-Temperature Reaction in Copper-Oxygen System. U. S. Dept. of Commerce, STR-2556, Feb. 1961, 4 p.

Reaction between Cu surface and oxygen is shown by deposition of a solid film on Cu at 4-40° K. during treatment with partially dissociated oxygen that had been passed through a high-frequency microwave discharge. Measurement of film thickness with ellipsometer. (R1h; Cu)

375-R. Contamination of Titanium by Water Vapour. P. C. Hughes and I. R. Lamborn. Institute of Metals, Journal, v. 89, Jan. 1961, p. 165-168.

Hydrogen contamination of Ti at temperatures to 900° C. and the influence of concurrent oxidation under particular conditions are studied as a function of humidity, temperature and time. Hydrogen contamination in moist, but otherwise inert, atmospheres is negligible below 590° C. The results suggest that in moist oxidizing atmospheres this threshold temperature will be raised. The competing effects of hydrogen and oxygen diffusion on microstructure are examined as a function of surface oxygen concentration, hydrogen partial pressure and temperature. 5 ref. (R1h, Q26s; Ti)

376-R. Atmospheric Corrosion--Fatigue of Age-Hardened Aluminum Alloys. Trevor Broom and Anthony Nicholson. Institute of Metals, Journal, v. 89, Feb. 1961, p. 183-190.

Specimens of Al-4% Cu alloy, a Duralumin-type alloy to B.S. L65 and DTD 683 alloy are fatigued in air, in vacuum and in various gaseous environments at -196 to 20° C. after aging and solution treatment at 135-530° C. and after various surface treatments, including anodizing, chemical oxidizing and coating with Zn chromate and butyl rubber. Accelerated fatigue in the presence of water vapor is observed with crack initiation and growth. The mechanism involves the production of hydrogen ions at clean surfaces exposed by slip and the diffusion of the ions into the metal. 22 ref. (R1e, R3, 2-64; Al-b)

377-R. (English.) Anodic Oxide Films on Titanium. Hiroshi Chiba. Electrochemical Society of Japan, Journal, v. 28, Jan-Mar. 1960, p. E3-E5.

Investigation of relationship between current density during anodization and surface state of resulting oxide film on Ti. Analysis of formed films indicates that higher density effects more rapid changes in microstructure and surface characteristics of formed film. 3 ref. (R1h, L19; Ti)

378-R. Design Considerations for the Reduction of Corrosion of Works Structures

and Equipment. A. J. P. Tucker. South African Mechanical Engineer, v. 10, Jan. 1961, p. 156-164.

Painting, weld sealing and cladding as methods of preventing corrosion of steel foundations, floors and equipment in industrial plants. (R10, L22, L26, K-general; ST, 4-57)

379-R. Corrosion of Copper and Its Alloys in Sea Bittern. A. N. Kappanna and A. Visvesevara Rao. Indian Journal of Applied Chemistry, v. 23, Mar. 1960, p. 117-121.

Corrosion resistance of brass, bronze, phosphor bronze, Monel metal and Cu in aerated sea bittern. 7 ref. (R4b; Cu-b)

380-R. Analytical Procedures for Evaluating High Temperature Failures. W. R. Foley. Metals Engineering Quarterly (American Society for Metals), v. 1, Feb. 1961, p. 90-101.

Use of analytical procedures and the interpretation of results in evaluating elevated temperature failures in power boilers. The procedures are those commonly used in metallurgical laboratories and include visual and macroscopic examination; metallographic examination; analysis of scale and deposit utilizing spectrographic, X-ray and wet chemical techniques and mechanical tests. (R-general, 2-62, T26q)

381-R. (Russian.) Prospective Metals for the Manufacture of Apparatus Used in Intensified Production of Alumina. M. N. Rozov. Tsvetnye Metally, Dec. 1960, p. 28-32.

Review of conditions affecting steel subjected to high temperature corrosion in alkaline alumina baths. Relationship of corrosion rate to alloy composition, bath agitation rate and concentration of Na_2O and NaO. 9 ref. (R6j, R6m, T29; ST, 17-57)

382-R. Timken's Process for Phosphatizing Bearings. Products Finishing, v. 25, Mar. 1961, p. 64-70.

Roll-neck bearings are phosphatized to prevent corrosion while they are being stored prior to use. Phosphatization of the bores of cones on roll-neck bearings reduces scuffing and scoring of roll-necks. (R10g, L14b, T7d)

383-R. Can We Stop Autobody Corrosion. American Machinist/Metalworking Manufacturing, v. 105, Feb. 20, 1961, p. 103-104.

Comparison of 1010 steel, coated stainless steels and Al alloys as to formability and corrosion resistance in automobile body applications. (R-general, Q23q, T21a; Al-b, ST)

384-R. Kinetics and Mechanism of Zinc Dissolution in Acid. R. S. Kapner and H. E. Hoelscher. I/EC (Industrial and Engineering Chemistry), v. 53, Mar. 1961, p. 239-244.

Reaction between dilute acids and packed beds of metal spheres is used to simulate small particle catalytic reactions. (R6g; Zn)

385-R. (Translation-ConBur.) Rate of Solution of Copper in Dilute Solutions of Sulphuric Acid Containing Oxygen and Copper and Iron Sulphates. A. I. Kinevskii. Journal of Applied Chemistry of the USSR, v. 33, Mar. 1960, p. 608-612.

Effectiveness of ferric ion as a cathodic depolarizer during the dissolution of Cu in H_2SO_4 containing O, Cu and ferrous and ferric sulphates. Reaction mechanisms. 10 ref. (R6g; Cu)

386-R. Generalized Rules for Controlling Chemical Process Equipment Corrosion. W. W. Shepard. Corrosion, v. 17, Mar. 1961, p. 18-20.

Methods of controlling liquid-vapor interface corrosion, high or low temperature corrosion, pitting, stress corrosion cracking and hydrogen embrittlement in processing equipment. Use of a punch card system for keeping corrosion data. (R10, T29)

387-R. Influence of Acid and Chloride Concentrations on Corrosion in a Nitric Acid Concentrator. J. B. Lowe. Corrosion, v. 17, Mar. 1961, p. 26-28.

Prevention of corrosion in a concentrator made of 347 stainless steel by use of ozone and electrolytic cells for chloride removal. Rate of corrosion of Hastelloy, Carpenter 20, Ni-O-Nel, Inconel and various stainless steels is compared in liquid and vapor phases of 20-40% nitric acid containing 550-900 ppm. chlorides to determine tolerable chloride concentrations. (R6, R10, T29; Ni-b, SS, 17-57)

388-R. Aluminum Satisfactory to Resist Ammonium Nitrate Corrosion. Corrosion, v. 17, Mar. 1961, p. 28.

Applications of Al, stainless steel and concrete in ammonium nitrate production. Corrosion prevention techniques. (R6j, R10, T29; Al, SS, 17-57)

389-R. Effects of Alternating Currents in Causing Corrosion. F. E. Kulman. Corrosion, v. 17, Mar. 1960, p. 34-35.

Review of investigations on alternating current, electrolytic corrosion of Fe, Pb, Cu, Al and other metals. Effect of electrolyte composition, current density and size and arrangement of electrodes on corrosion rate. Current rectification. (R1a; Al, Cu, Fe, Pb)

390-R. Tin Plated Cans Sprayed With Soluble Oil Formulation Show Increased Rust Resistance. Raymond K. Cohen. Corrosion, v. 17, Mar. 1961, p. 103t.

Emulsion of a soluble oil in water containing a sodium nitrate inhibitor and surface-active agent reduces external corrosion of tin plated cans. (R10; Sn)

391-R. Corrosion of Reinforcing Steel in Concrete in Marine Atmospheres. Howard F. Finley. Corrosion, v. 17, Mar. 1960, p. 104t-108t.

Relation of concrete porosity, permeability, strength, water saturation and electrical resistivity to corrosion rate of reinforcing steel in concrete structures exposed to sea water action. Existence of natural galvanic cells in concrete structures explained in terms of differential oxygen concentration in pour space water. Recommendations for preventing corrosion in new structures and correcting problems in existing structures. 23 ref. (R4b; ST, 4-57)

392-R. Hydrogen Pickup During Aqueous Corrosion of Zirconium Alloys. Warren E. Berry, Dale A. Vaughan and Earl L. White. Corrosion, v. 17, Mar. 1961, p. 109t-117t.

Hydrogen absorption during corrosion of binary Zr alloys containing Ni, Sn, Fe, Cu or Sb and Zircaloy-2 with Sb, As, Bi or Te additions. Effect of alloying elements on hydrogen absorption and corrosion rate. 14 ref. (R4; Zr-b)

393-R. Anodic Polarization of Lead-Platinum Bielectrodes in Chloride Solutions. L. L. Shreir. Corrosion, v. 17, Mar. 1961, p. 118t-124t.

Report on potential-time studies which show the effect of a Pt microelectrode on the behavior of Pb in chloride solutions. Possible applications of Pb-Pt bielectrodes as anodes for cathodic protection purposes. (R6, R10d; Pb)

394-R. Resistance of Aluminum Alloys to Underground Corrosion. D. O. Sprowls and M. E. Carlisle, Jr. Corrosion, v. 17, Mar. 1961, p. 125t-132t.

Summary of field test data and service experience with Al alloys underground showing effect of soil variation on corrosion of pipelines and other structures. Cathodic protection and protective coatings for Al structures. Stray current and galvanic effects. (R8, R10, T26r; Al-b, 17-57)

395-R. Chloride Corrosion and Fouling in Catalytic Reformers With Naphtha Pretreaters. E. B. Backensto and A. N. Yrick. Corrosion, v. 17, Mar. 1961, p. 133t-136t.

Summary of laboratory studies simulating corrosion of carbon steel test specimens in the $HCl-H_2S-NH_3$ system established in catalytic reformers. Effect of pH, air atmosphere and addition of ammonia neutralizers and amine inhibitors on corrosion rate. (R6, R7d, R11; CN)

396-R. Massive De-Aluminization of Aluminum Bronze by Chloride Crevice Attack. L. W. Gleekman and R. K. Swandby. Corrosion, v. 17, Mar. 1961, p. 144t-148t.

Corrosion of Al bronze drying drum by calcium carbonate paste containing 0.2% NaCl and sodium sulphate as minor impurities. Nature of attack. Corrosion testing of 90-10 cupro nickel as material for drying drum. (R1b, R6j; Cu-b, Al, Ni)

397-R. Cathodic Protection and Zinc Grounding in Industrial Plant Construction. J. D. Ghesquiere. Corrosion, v. 17, Mar. 1961, p. 149t-153t.

Design of cathodic protection system. Effect of Cu electrical grounding rods on protection current requirement. Use of Zn rods for grounding purposes. 9 ref. (R-general, 18-71)

398-R. Corrosion of Superalloys by Selected Fused Salts. A. Moskowitz and L. Redmerski. Crucible Steel Co. of America (Wright Air Development Division). U. S.

Office of Technical Services, PB 161848, Mar. 1960, 84 p. $2.25.

Test program involves the application of salts (potassium chloride and lithium fluoride) to thin sheet materials followed by exposure to high temperatures at various stress levels is carried out to determine the severity of corrosive attack on four types of nickel-base alloys and a cobalt-base alloy. Thin coatings of the salts cause severe corrosion of the alloys in air, resulting in accelerated failures of specimens in creep-rupture testing. Only very little corrosion occurs without the presence of oxygen. (R6j; Ni-b, Co-b)

399-R. High-Temperature Oxidation of Iron-Chromium Binary Alloys in Water Vapor. Pt. 1. Preliminary Study of the Mechanism of Iron-Chromium Binary Alloys in Water Vapor. C. T. Fujii and R. A. Meussner. U. S. Naval Research Laboratory. U. S. Office of Technical Services, PB 161696, Sept. 1960, 24 p. $.75.

Correlations between chromium concentration of the alloy, temperature oxidation, weight gain, oxide composition and the microstructure of the oxide layers; and a possible mechanism for the oxidation process. (R1h; Fe-b, Cr)

400-R. Corrosion of Metals in Tropical Environments. Pt. 5. Stainless Steels. B. W. Forgeson. U. S. Naval Research Laboratory. U. S. Office of Technical Services, PB 161749, Sept. 1960, 19 p. $.75.

Over an eight year period, specimens of six stainless steels were exposed to underwater and atmospheric environments. In the underwater phase of the study, the steels were severely pitted during sea water immersion. Mean tide immersion produced 1/4-1/10 the pitting of continuous immersion. After submersion in fresh water, the metals show practically no pitting attack. It is suggested that greater pitting attack in tropical than in temperate seas may be the result of heavy marine fouling. (R3s, R4b; SS)

401-R. Corrosion Inspection Methods in Practice. Herbert C. Van Nouhuys. American Gas Journal, v. 188, Mar. 1961, p. 29-33.

Review of corrosion detection methods for underground pipelines. Description of equipment and techniques used to measure soil resistivity, pipe to soil potentials, pipe current density and soil oxidation-reduction potentials. Prevention of corrosion by cathodic protection and pipeline coatings. 29 ref. (R8, R10, T26r)

402-R. (German.) Combustion of Iron Wire in Oxygen at High Pressures. Leonhard Kirschfeld. Archiv fur das Eisenhuttenwesen, v. 32, Jan. 1961, p. 57-62.

Combustion of Fe wire (1 and 2 mm. diameter) in a pressure bomb under static oxygen atmosphere of 1-100 atm. pressure. Measurement of combustion rate as influenced by wire diameter and oxygen pressure. Reaction mechanisms. (R1h; Fe, 4-61)

403-R. The Prevention of Silver Tarnishing. Heinz W. Dettner. Plating, v. 48, Mar. 1961, p. 285-287.

Tarnishing is prevented by electrolytic treatment, using either cataphoretic deposition of an oxide layer or electrolytic chromating. 11 ref. (R10; Ag)

404-R. (French.) Aqueous Corrosion of Stainless Steel. Pt. 1. L. Colombier. Metallurgie et la Construction Mecanique, v. 93, Jan. 1961, p. 29-39.

Intergranular pitting and strain corrosion caused by action of aqueous solutions containing hypochlorous acid or the chlorides of Hg, Fe, Cu, Sn, Mn or Cr on martensitic, ferritic and austenitic stainless steels. (R2j, R4, R6; SS)

405-R. (French.) Corrosion by Uranium Hexafluoride. Pt. 1. Methods for Studying Corrosion. J. Dixmier, R. Hasson, S. Maraval and L. M. Vincent. Journal of Nuclear Materials, v. 3, Jan. 1961, p. 41-59.

Review of continuous and discontinuous methods for measuring corrosion reactions and the nature of the base metal and corrosion product, including electrochemical, mechanical and chemical assessment, radioactive tracer study; micro and macrosurface examination, electrical resistance measurements and thermo and microbalance, manometric and gravimetric techniques. Application of gravimetry to the study of the gas-metal corrosion reaction of steel and alloy specimens with UF_6. 23 ref. (R6p, S11, 1-54, 10-54; ST, U, 14-68)

406-R. Atmospheric Corrosion of Metals. Pt. 3. Corrosion of Metals in Calcutta. B. Sanyal, B. K. Das Gupta, P. V. S. Krishnamurthy and G. K. Singhania. Journal of

Scientific & Industrial Research (India), v. 20D, Jan. 1961, p. 27-30.

The rates of corrosion of mild steel and Zn under outdoor and indoor conditions in industrial atmospheres. 3 ref. (R3n; CN, Zn)

407-R. Cathodic Protection for Old Pipe Line Systems. O. E. Moore. Pipe Line News, v. 33, Mar. 1961, p. 18-19, 22, 70.

Survey of corrosion mechanisms, galvanic cells and electrolytic action. Application of cathodic protection to coated and/or uncoated steel pipe lines. (R10d, R-general, T26p; ST)

408-R. Pipe Line News Annual Symposium on Pipe Line Corrosion Problems. George B. McComb. Pipe Line News, v. 33, Mar. 1961, p. 24-26.

Performance requirements of coating systems such as bond, electrical insulation, moisture penetration, resistance to attack by soil micro-organisms, insolubility, soil stress and hot line enamels. (R-general, T26q)

409-R. (Italian.) Theoretical Interpretation of Action of Organic Corrosion Inhibitors. Sergio Ferrari. Rivista di Ingegneria, Oct. 1960, p. 1112-1116.

Mechanism of corrosion inhibition by amines, by compounds containing sulphur and by aldehydes and ketones. Role of supertension, anodic or cathodic action of inhibitors, adsorption capacity, the ortho-effect and the effect of the double bond. 11 ref. (R10b, R10d)

410-R. (German.) Wear Abatement by Corrosion Protection. Bergbautechnik, v. 11, Jan. 1961, p. 20-26.

Review of corrosion in terms of uniform and bi-metal corrosion; corrosion by vagabond currents, by local elements and by simultaneous chemical and mechanical effects; and corrosion protection by proper material selection, coating, derusting and descaling operations, such as mechanical and flame derusting, and chemical reactions. Composition and structure of protective lacquers and plastic and electrolytic coatings. (R-general, 10-54)

411-R. The Effect of Metallic Cations on the Corrosion of Iron and Tin in Boiling Acids. W. Roger Buck, III, and Henry Seidheiser, Jr. Electrochemical Society, Journal, v. 108, Mar. 1961, p. 203-208.

In the presence of metallic cations in both boiling citric acid and hydrochloric acid the corrosion rate of Sn is apparently determined solely by the cathodic hydrogen evolution reaction. The corrosion rate of Fe in boiling citric acid depends upon the cation present. External coupling also influences the corrosion rates. 12 ref. (R1a, R6g, R7b; Fe, Sn)

412-R. Oxidation of Iron-Nickel Alloys. Pt. 4. Further Electron Diffraction Studies at Elevated Temperatures. R. T. Foley. Electrochemical Society, Journal, v. 108, Mar. 1961, p. 216-221.

The oxide films formed on Fe-Ni alloys containing 30, 41, 78 (3.8% Mo) and 80% Ni are studied at formation temperature to 1000° C. with reflection electron diffraction. Structures, lattice spacings, transformations and oxidation kinetics are observed as a function of temperature, presence of moisture at the oxide metal interface and composition, with consideration of possible temperature distortion of the diffraction pattern. 24 ref. (R1h, M22h, 2-60, 2-62; Fe-b, Ni-b)

413-R. Anodic Behavior of Austenitic Stainless Steels and Susceptibility to Stress Corrosion Cracking. S. Barnartt and D. van Rooyen. Electrochemical Society, Journal, v. 108, Mar. 1961, p. 222-229.

Anodic behavior of 16Cr-20Ni stainless steel, unsusceptible to stress corrosion cracking, is compared with that of a susceptible 18Cr-8Ni stainless in 42% $MgCl_2$ at 146° C. Potential-time behavior of pure Fe, Cr and Ni is also determined, with potentiostatic corrosion found to provide an accelerated test for susceptibility to cracking. 29 ref. (R-general, R1d, Q26s, 2-60; SS-e)

414-R. Effect of Dissolved Gases on Oxide Film Formation. J. J. Polling. Electrochemical Society, Journal, v. 108, Mar. 1961, p. 294-296.

Effects of oxygen and nitrogen in Zr on the color, thickness and potential barrier of the oxide film formed by anodization. 5 ref. (R1h, N15; Zr, O, N)

415-R. Corrosion Protection of Magnesium in Electronic Equipment. Harold Shapiro. Metal Finishing, v. 59, Mar. 1961, p. 40-45, 48.

Corrosion problems in assemblies of dissimilar metals. Immersion and electrochemical methods of protecting Mg against electrolytic corrosion. Electroplating of Mg; and limitations of plating as a protection against corrosion. Application of organic coatings for corrosion prevention. (R-general, R10, L-general, L17; Mg)

416-R. Material Study Relative to Corrosion. Paul F. Marx. Gas, v. 37, Mar. 1961, p. 83-86.

Galvanic action between alloy steels and carbon steel or malleable iron. Design of couplings to balance cathodic effect of materials against relative areas of various parts, so that materials having smallest area are cathodically protected by parts having large areas subjected to corrosion. (R1a, R10d; AY, CI-s, CN)

417-R. (Japanese.) 17-7 PH Stainless Steel. Pt. 5. Corrosion Resistance of Heat Treated 17-7 PH Stainless Steel Containing About 1% Al. To-oru Furukawa and Tomo-o Sato. Japan Institute of Metals, Journal, v. 25, Jan. 1961, p. 23-26.

Specimens of 17% Cr-7% Ni stainless containing 0.93% Al are corrosion tested in 10% H_2SO_4 (30° C.) and 40% HNO_3 (boiling) solutions after solution treatment at 1050°, cooling from 750-800° C. in water and air and aging at 400-500° C. for 0.5-500 hr. Corrosion resistance and passivity are compared favorably to 18-8 stainless as a result of heat treatments. 16 ref. (R-general, R6g, 2-60, 2-64; SS-e, Al)

418-R. (Japanese.) The Surface States of Tungsten Powder. Pt. 4. Oxidation Rate in O_2 Gas and X-Ray Line Broadening of Tungsten Powder. Shigetoshi Takayanagi. Japan Institute of Metals, Journal, v. 25, Jan. 1961, p. 44-48.

Effect of crystallite size and lattice distortion and imperfections on the line broadening phenomena as a function of oxidation rate, compacting pressure and heating time at 400-700° C. in H_2 and O_2 atmospheres. 14 ref. (R1h, M22, 3-73; W, 6)

419-R. (Japanese.) Corrosion of Aluminum in Deionized Water at Elevated Temperatures. Factors Affecting Intergranular Corrosion of Pure Aluminum. Pt. 1. Masayuki Kawasaki, Sueo Nomura and Tatsuo Kondo. Japan Institute of Metals, Journal, v. 25, Jan. 1961, p. 76-79.

Annealed and cold worked 99-99.99% pure specimens are examined in static autoclave tests in O, H and Ar atmospheres at 200° C. for 10-60 hr. Effect of specimen purity and grain size, pH of water and interaction of atmosphere and plastic deformation induced slip defects on weight gain and corrosion attack mechanism. 11 ref. (R4e, R2h, 2-60, 2-62, 3-68; Al-a)

420-R. (Japanese.) Corrosion of Aluminum in Deionized Water at Elevated Temperatures. Effect of Alloy Additions. Pt. 2. Masayuki Kawasaki, Tatsuo Kondo and Sueo Nomura. Japan Institute of Metals, Journal, v. 25, Jan. 1961, p. 80-83.

Binary Al alloys, containing 6.5-2% Fe or Ni, 1-2% Cu or 1% Zn, Mg or Mn, in ingot and sheet form, are examined by autoclave tests at 200-300° C. for 5 min. to 290 hr., with X-ray diffraction and metallographic examination of corroded surfaces. Weight gain and intergranular corrosion mechanisms are determined as a function of composition. 13 ref. (R4e, R2h, M-general, 2-60, 2-62; Al-b, Fe, Ni, Cu, Zn, Mg, Mn)

421-R. Stop Galvanic Corrosion. Federico Strasser. Product Engineering, v. 32, Feb. 20, 1961, p. 87, 89.

Survey of five methods for reduction of galvanic corrosion including use of metals near each other in the galvanic series, waterproofing, insulating, dividing potential difference and protection with sacrificial anodes. (R1a, R10)

422-R. Stress Corrosion of Steels for Aircraft and Missiles. E. H. Phelps and A. W. Loginow. Paper from "High-Strength Steels for the Missile Industry". American Society for Metals, Novelty, Ohio, 1961, p. 40-78.

Very high strength alloys hardened by heat treatment, like many nonferrous alloys used in conventional aircraft, are under certain conditions susceptible to atmospheric stress-corrosion cracking. Tempering at temperatures of 1100° F. or above confers resistance to stress corrosion. Austenitic stainless steels hardened to very high strength levels by cold working are not susceptible. Protective coatings that are anodic to steel appear to be very effective in preventing stress corrosion. (R1d, T24e; SS-e)

423-R. Scale on Wire Rod and Its Removal by Mechanical Means. Pt. 1. The Formation and Structure of Scale on Wire Rod. S. Garber and G. M. Sturgeon. Wire Industry, v. 28, Mar. 1961, p. 257-259, 295.

The oxide scale formed on carbon steel rod after heating is found to be composed of three layers, wustite, magnetite and hematite. The kinetics of oxidation are influenced by the finishing temperature and subsequent cooling rate. 23 ref. (R1h, 2-64, 9-52; CN, 4-53)

424-R. Corrosion Problems in the Railway Industry. T. Henry Turner. Corrosion Prevention & Control, v. 8, Mar. 1961, p. 37-45.

Corrosion of steel and Fe (containing small amounts of Zn, Cu, Pb, Sn, Ni, Cr and Al) railway equipment is caused by air pollution, atmospheric conditions, rainfall, chemicals and other factors. Suggested corrosion prevention treatments included painting, enameling, galvanizing, tinning and varnishing. 21 ref. (R-general, L-general, T23; ST, Fe-b, 17-57)

425-R. (Translation-ConBur.) Kinetics of Oxidation of Fine Magnesium Powders at Elevated Temperatures. I. A. Makolkin, I. I. Vernidub, Yu. N. Zhvanko, V. T. Karpov, G. S. Razumovskaya and A. A. Vol'khovskaya. Journal of Applied Chemistry of the USSR, v. 33, Apr. 1960, p. 826-832.

Kinetics study of the reactions between Mg powders and air, oxygen and nitrogen at 350-500° C. shows that up to 450° C. the surface film of MgO and Mg_3N_2 has protective properties. 11 ref. (R1h; Mg, 6)

426-R. (Translation-ConBur.) Transition From Uniform to Pitting Corrosion in High-Temperature Oxidation of a Metal Under Cyclic Stress. E. L. Kazimirovskaya and A. V. Ryabchenkov. Journal of Applied Chemistry of the USSR, v. 33, Apr. 1960, p. 843-846.

Study of corrosion in heat resistant austenitic steels under cyclic stress at 750° C. in dry and moist air containing SO_2. 3 ref. (R1h, R3n; SS-e)

427-R. Investigations Carried Out on the Corrosion of Lead Vats. Martin Buch. Wire World International, v. 2, Dec. 1960, p. 289-292.

Steel sheet specimens are annealed in Pb baths at 932 and 1328° F. for 3-16 hr. to determine corrosion losses and the influence of the annealing time and temperature on the useful life of Pb containing steel vats used in the annealing of drawn wire. (R-general, R6m, T28n, 2-61; ST, Pb, 17-57)

428-R. Corrosion of Austenitic Stainless Steel in CO_2. Metal Industry, v. 98, Mar. 10, 1961, p. 187.

X-ray diffraction examination of the oxide coating formed on vapor blasted and etched 18-8 Ti stainless steel exposed to CO_2 to determine the extent of oxidation of stainless steel cladding materials in nuclear reactors using CO_2 as coolant. Prior surface condition of the specimen is found to influence the nature and composition of the oxide and the rate of corrosion. (R1h, M22g, T11g; SS, 17-57)

429-R. Easy-to-Apply Resin Coatings Block Corrosive Attacks. Iron Age, v. 187, Apr. 13, 1961, p. 92-93.

Use of resin coatings which harden by chemical action to protect metal, concrete and wood surfaces from corrosion. (R10g)

430-R. Gases in Steel (Corrosion of an Iron Alloy Containing 25% Chromium and 3% Aluminum by a Melt Containing Oxides of Vanadium and Sodium). A. J. Pollard and A. J. Edwards. Report of NRL (Naval Research Laboratory) Progress, Mar. 1961, p. 26-27. (Available as PB 171316 from U. S. Office of Technical Services, Washington 25, D. C.) $1.25.

Corrosion rates measured by weight and diameter changes of cylindrical specimens suspended in molten 90% vanadium pentoxide-10% sodium sulphate solution at 1500-1850° F. for various times. (R6j, R6m, 2-62; Fe-b, Cr, Al)

431-R. Gases in Steel (High-Temperature Oxidation of Iron-Nickel Binary Alloys in Water Vapor). C. T. Fujii and R. A. Meussner. Report of NRL (Naval Research Laboratory) Progress, Mar. 1961, p. 28-29. (Available as PB 171316 from U. S. Office of Technical Services, Washington 25, D. C.) $1.25.

Oxidation rates for 10-25% Ni-Fe specimen exposed 9 hr. at 1100° C. in

an atmosphere containing 10% H_2O, with X-ray diffraction and metallographic data for wustite, magnetite and spinel structure of the oxide layers. Comparison with Fe and a Fe-Cr alloy. (R1h, M-general, 2-62; Fe-b, Ni, Cr)

432-R. Physical Metallurgy of Refractory Metals (Oxidation of Niobium-Titanium Alloys). J. Stoop. Report of NRL (Naval Research Laboratory) Progress, Mar. 1961, p. 32-33. (Available as PB 171316 from U. S. Office of Technical Services, Washington 25, D. C.) $1.25.

Cb-Ti alloys, containing 65-100% Ti, are produced by vacuum consumable electrodes arc melting, forged, hot and cold worked and oxidized in air at 1985° C. for various times. Oxidation rate is measured by weight gain as a function of Ti concentration and temperature. (R1h, 2-60, 2-61; Cb-b, Ti-b)

433-R. (Pamphlet.) The Role of Copper and Physico-Chemical Factors in Steam Generator Tube Failures. J. P. Engle and C. E. Fox. Dow Industrial Service. Div. of Dow Chemical Co., Cleveland, Ohio, 8 p.

Paper presented Apr. 22, 1958, at meeting of the Production Committee, Southeastern Electric Exchange. Influence of the presence of Cu, suspended solids, interior tube projections, surface imperfections and differential thermal cells on localized deposition in boiler tubes causing overheating. Methods for prevention of Cu plating onto the steel tubes from acid solutions by using an additive. 3 ref. (R-general, 9-73, T26q)

434-R. Solving Corrosion Problems in HF Alkylation Units. G. W. G. McDonald and D. J. Bergman. Corrosion, v. 17, Apr. 1961, p. 9-10, 12-13.

Evaluation of Monel, various steels, Ag, Duranickel and other metals used in valves, bolts and exchangers for HF alkylation units. (R6g, T29; Ag, Ni-b, ST, 17-57)

435-R. Evaluation of Some Materials and Coatings for Utility Pole Line Hardware. John S. Melvin. Corrosion, v. 17, Apr. 1961, p. 14-15, 18-19.

Evaluation of Al, stainless steel and high-strength low-alloy steels for use as corrosion resistant coatings on utility pole hardware. Factors considered include corrosion resistance, adaptability and compatibility. (R3; Al, AY, SS)

436-R. Composition of Corrosion Products Formed on Metals in Steam Condensate. C. E. Imhoff, R. D. Eberhardt and E. W. Arneson. Corrosion, v. 17, Apr. 1961, p. 95.

Study of corrosion products formed in steam condensates of pH 5.1-9.6 on carbon steel, cast iron, Admiralty metal, Muntz metal, Al 3S and Zn at 100 and 212° F. 7 ref. (R4d; Al-b, CN, Cu-b, Fe, Zn)

437-R. Corrosion of Metals by Weak Acids Under Heat Transfer Conditions. L. R. Scharfstein, N. D. Groves and C. M. Eisenbrown. Corrosion, v. 17, Apr. 1961, p. 97-100.

Weight-loss measurements are made on 304 L and 316 stainless steels, Carpenter 20-Cb, Hastelloy B, Inconel and Monel in solutions of 10%, 50% and concentrated acetic acid, formic acid and phosphoric acid. (R6g; Cb-b, Ni-b, SS)

438-R. Aluminum Aluminized Steel and Galvanized Steel in Seven Coastal Environments. Thomas A. Lowe. Corrosion, v. 17, Apr. 1961, p. 101-104.

Al, aluminized steel and galvanized steel pole line hardware are exposed in a severe marine environment for three years. Variables include aluminizing process and type of base steel. (R3p; Al, ST, 8-65)

439-R. Corrosion Product Films Formed on Aluminum in High Temperature Water. D. F. MacLennan. Corrosion, v. 17, Apr. 1961, p. 105-108.

Corrosion products formed on Al alloys following exposure to 300° C. high-purity water for short periods of time are examined by optical and electron microscopy. 5 ref. (R4, M21; Al)

440-R. Elevated Temperature Corrosion of Type 310 Stainless Steel by Vanadium Compounds. Hugh L. Logan. Corrosion, v. 17, Apr. 1961, p. 109-111.

Seamless 310 stainless steel tubes are used as containers for synthetic ash mixtures to determine corrosion rate in wet and dry air or He atmospheres at 1700-2000° F. for 6-200 hr. (R6, R7d; SS, 4-60)

441-R. Investigation of Mild Steel Corrosion Rate in San Diego Harbor. M. H. Peterson and L. N. Waldron. Corrosion, v. 17, Apr. 1961, p. 112-114.

Mild steel panels are immersed for 6-8 month periods to determine the basic corrosion rate from measurements of weight loss and degree of pitting. Tables compare corrosion rate for unprotected panels and for those protected cathodically. (R4b; CN)

442-R. Behavior of Stainless Steels and Other Engineering Alloys in Hot Ammonia Atmospheres. J. K. Mihalisin, E. N. Skinner and J. J. Moran. Corrosion, v. 17, Apr. 1961, p. 115-119.

Monel, Inconel, 37Ni/20Cr, 60Ni/15Cr, 80Ni/20Cr, 11 steels and a 99.49% pure Ni are tested in an ammonia converter and in a chemical plant ammonia line to determine corrosion resistance. 12 ref. (R6j; Ni-b, ST)

443-R. Intergranular Corrosion of Commercially Pure Zirconium. R. S. Payne and D. K. Priest. Corrosion, v. 17, Apr. 1961, p. 120-124.

Selective corrosion during service in hot HCl has been noted in the heat affected zone of a fabricated Zr weldment. The attack is found to be intergranular in nature and associated with a precipitated phase in the grain boundaries. Methods of prevention include using high-purity Zr and heating the weldment to 1800° F. and water quenching. 11 ref. (R2h, R6g; Zr, 7-51)

444-R. (German.) Development of Alloys Resistant to Fluoride Melts. Chemische Rundschau, v. 14, Feb. 1, 1961, p. 45-46.

Review of corrosion mechanism acting on Cr in fluoride melts (NaF-LiF-KF-UF_4; NaF-ZrF_4-UF_4) and corrosion behavior of NiMo and CrNiMo alloys at temperatures to 980° C. Development of a corrosion resistant INOR-8 alloy (15-18% Mo, 6-8% Ni, maximum 5% Fe) as material for fluoride melt containers. Mechanical properties, weldability and solderability of the alloy. (R6k, 2-62, A-general, Q-general; Fe-b, Ni-b, Mo, Cr)

445-R. (German.) Nonmetallic, Organic Materials as Corrosion Resistant Coatings. Hubert Salmen. Praktische Chemie, v. 11, Dec. 1960, p. 503-506.

Review of properties of corrosion resistant plastic coatings (low melting plastics and heat resistant hardenable plastics) used to protect unalloyed steel from external corrosion, alloyed steel from intercrystalline corrosion, brass parts from fresh and sea water corrosion and steel parts in atomic reactors from radiation defects. Correlation between water vapor diffusion through plastic coating and thermal conductivity. (R10g; AY, Cu-b, ST, 8-70)

446-R. Corrosion Protection With Nickel-Base Hardsurfacing Alloys. G. R. Bell. Corrosion Technology, v. 8, Mar. 1961, p. 65-70, 76.

Application of Ni-Cr alloys to steel parts to increase operating efficiency and protect parts against corrosion and atmospheric and high-temperature oxidation. Coatings are applied by spraying and fusing. (R10, L24; ST, Cr-b, Ni-b)

447-R. Corrosion at Carbon-Metal Contacts. T. K. Ross and A. H. Morseshedian. Institution of Chemical Engineers, Transactions, v. 38, 1960, p. 43-45.

Corrosion tests on carbon surfaces in aerated systems show that the surfaces adopt a cathodic role towards the test materials which include Fe, Ni and Cu alloys. The effect of the aeration rate on the corrosion is determined from weight loss measurements. 11 ref. (R6q; Cu-b, Fe-b, Ni-b)

448-R. (French.) Method for Improving the Resistance of Combined Ni-Cr Deposits to Atmospheric Corrosion. H. Brown and D. R. Millage. Galvano, v. 30, Jan. 1961, p. 23.

Resistance of Ni-Cr, Ni-Cu-Cr, Ni-Cu-Cr-Cr and Cr-Ni-Cr electroplating deposits to corrosion examined by exposure to SO_2, Cu chloride and by salt spray and Corrodkote tests. Determination of ductility. (R-general, R11; Ni-b, Cr-b, Cu)

449-R. (French.) Resistance to Corrosion of Ornamental Coatings on Zinc Alloy Castings. O. J. Jones, V. E. Carter and J. Edwards. Galvano, v. 30, Jan. 1961, p. 24.

Effect of casting defects, of increased thickness of the Cr coat and replacement of the Cu subcoat by a Ni deposit on the corrosion resistance of Zn alloys. (R-general, L17c; Zn, 5, Cu, Cr, Ni, 8-62)

450-R. (Czech.) Scale Formation in the Heating of Steel. V. Hasek. Strojirenstvi, v. 10, Dec. 1960, p. 916-919.

The carbon steels 12050 W6H and 12061 W5H and the low-alloy steels 14220 CE2 and 15260 CV4 are held at 1100-1290° C. for 0-60 min. to determine the weight increase by oxidation as a function of time. Microhardness and microstructure of the scale formed. 9 ref. (R1h; ST)

451-R. (French.) Oxidation of Zinc at High Temperatures. Oxidation Kinetics of Zinc in an Atmosphere of Oxygen and of Carbon Dioxide. I. G. Murgulescu and D. Cismaru. Journal de Chimie Physique et de Physico-Chimie Biologique, v. 58, Feb. 1961, p. 181-185.

Oxidation of Zn at 370-400° C. in an atmosphere of oxygen or of CO_2 at normal pressure. Effect of partial oxygen pressure on oxidation rate. 12 ref. (R1h; Zn)

452-R. (French.) Corrosion Control. F. Criqui. Atomes, no. 174, 1960, p. 51-55.

Application of antibiotics, anodic and cathodic inhibitors and fatty amines in corrosion control. (R10)

453-R. Resistance of Tinplate to Rust and Corrosion. Australasian Manufacturer, v. 45, Mar. 11, 1961, p. 84-89.

Discussion of corrosion processes inside tin plated steel cans with plain or lacquered surfaces. (R1h, R7n; ST, Sn, 8-62)

454-R. Oxidation Studies on Ni-Al Alloys. Kazuo Fueki and Hirotsusu Ishibashi. Electrochemical Society, Journal, v. 108, Apr. 1961, p. 306-311.

Air oxidation rates of Ni, 1-12% Al alloys at 700-1000° C. follow the parabolic rate law. Oxidation rate, crystal structure of the oxide film and alloy surface and chemical composition of the oxide film vary with temperature and alloy composition. These data are compared with those obtained from the oxidation of an Fe-15% Al alloy. 13 ref. (R1h; Ni-b, Al)

455-R. The Permeability of Aluminum to Hydrogen. C. N. Cochran. Electrochemical Society, Journal, v. 108, Apr. 1961, p. 317-321.

Permeability constant for hydrogen in Al and in Al-1% Ni is sensitive to temperature, surface films formed by water, chemical and metal additions and to the degree of ionization of the hydrogen. 13 ref. (R4; Al-b, Ni)

456-R. Oxidation of High-Purity Aluminum and 5052 Aluminum-Magnesium Alloy at Elevated Temperatures. C. N. Cochran and W. C. Sleppy. Electrochemical Society, Journal, v. 108, Apr. 1961, p. 322-327.

Oxidation of chemically polished high-purity Al in dry oxygen, water vapor and moist air at 450-640° C. is nearly linear to a weight gain of 3 micrograms per sq. cm., then decreases rapidly. Oxidation of the Mg alloy is much faster. Surface roughness and the presence of water affect the rate. The Al oxidized to eta-alumina and the alloy to MgO. 13 ref. (R1h; Al-b, Mg)

457-R. Critical pH and Critical Current Density for Passivity in Metals. Herbert H. Uhlig. Electrochemical Society, Journal, v. 108, Apr. 1961, p. 327-330.

An equation is derived relating pH to the critical current density necessary to passivate metals. Conditions under which passivation occurs are discussed and related to results predicted by the equation. 15 ref. (R10c)

458-R. Electrochemical Measurements of Corrosion Rates on Zirconium and Zircaloy-2 at Elevated Temperatures. A. L. Bacarella. Electrochemical Society, Journal, v. 108, Apr. 1961, p. 331-336.

Electrochemical measurements on Zr and Zircaloy-2 in highly oxygenated, dilute sulphuric acid at 167 and 208° C. provide data which are used to calculate corrosion rates. 14 ref. (R6g; Zr-b)

459-R. Anodic Polarization Behavior of Iron-Nickel Alloys in Sulphuric Acid Solutions. George Economy, Rudolph Speiser, F. H. Beck and M. G. Fontana. Electrochemical Society, Journal, v. 108, Apr. 1961, p. 337-343.

The anodic behavior of Fe-Ni alloys containing 0-100% Ni in H_2SO_4 under constant current and constant potential is correlated with metallurgical structure and electrochemical environment. In general, the behavior of the alloys is intermediate to that of pure Fe and Ni. 18 ref. (R6g; Fe-b, Ni-b)

460-R. An Investigation of Columbium as an Electrolytic Capacitor Metal. A. Shtasel

and H. T. Knight. Electrochemical Society, Journal, v. 108, Apr. 1961, p. 343-347.

Anodic oxidation characteristics of Cb metal are determined. Both wet and solid capacitors of Cb are similar to those of Ta except that working voltages of Cb capacitors are about 1/3 and d-c. leakage about double those of Ta and are less affected by severe radiation. 6 ref. (R1h, P15; Cb, Ta)

461-R. Mechanism of the Oxidation of Nickel and Chromium Alloys. D. V. Ignatov and R. D. Shamgunova. NASA Technical Translation F-59, Mar. 1961, 104 p. (Available from National Aeronautics and Space Administration, Washington, D. C.) $2.50.

Gravimetric analysis, electron diffraction analysis, X-ray diffraction and metallographic analysis using an electron microscope of Cr, Ni, NiCr alloy and NiCrTi alloy at 400-1050° C. to determine the mechanism of oxide formation, oxidation kinetics and the effect of temperature and heating time on the structure and composition of oxide films. 117 ref. (R1h, M22, S11b; Cr-b, Ni-b, Al, Ti)

462-R. The Corrosion Resistance of Some Sprayed Metallic Coatings. T. K. Ross and E. L. Smith. British Chemical Engineering, v. 6, Mar. 1961, p. 172-175.

Sprayed coatings of Zn, Mg or Al on mild steel reduce the corrosion of the steel by two mechanisms--cathodic protection and pore blocking. 10 ref. (R-general; CN, Al, Mg, Zn, 8-67)

463-R. (Swedish.) Effect of Acidity on Stress Corrosion of Brass. Einar Mattson. Teknilisen Kemian Aikakauslehti, v. 17, Dec. 31, 1960, p. 848-849.

Alpha brass containing 37.2% Zn is exposed to a bending load while immersed in an ammoniacal $CuSO_4$ solution the acidity of which is varied from 2-11.2 pH by addition of $(NH_4)_2SO_4$ or NH_3, respectively. Time elapsed until failure as a function of acidity. (R1d; Cu-n)

464-R. Stress Corrosion in Brass Considered Against the Background of Potential/pH Diagrams. E. Mattisson. Electrochimica Acta, v. 3, Jan. 1961, p. 279-291.

Study of stress corrosion in brass (62.8% Cu, 37.2% Zn) in ammoniacal $CuSO_4$ solution. Corrosion behavior and corrosive medium composition are related with reference to potential pH diagrams for the corroding system. Time to cracking is found to be dependent on pH and Cu $(NH_3)_2$ + ion formation is an important factor in reduction reaction. 10 ref. (R1d; Cu-n)

465-R. How Temperature, Velocity of Potable Water Affect Corrosion of Copper and Its Alloys. Laurence L. Quill and Malvern F. Obrecht. Heating, Piping and Air Conditioning, v. 33, Apr. 1961, p. 129-133.

Testing the erosive-corrosive effects of water in Cu and Cu alloy distribution systems. Findings are focused on the influence of temperature and velocity factors, chemical action and character of corrosion. (R4; Cu-b)

466-R. Battle Corrosive SO_2 at 2280° F. Chemical Processing, v. 24, Apr. 1961, p. 86-88.

Application of stainless steel castings in pipe lines carrying hot, corrosive SO_2 from a sulphur burner to a cooling pond at 2280° F. Data are given for short and long time tensile and creep properties and corrosion resistance of the alloy. (R6, Q27, Q3, T26r; SS, 5, 17-57)

467-R. Some Studies of Corrosion in Liquid Metal. H. M. Finniston. Paper from "Australian Atomic Energy Symposium". Melbourne University Press, Melbourne, Australia, 1958, p. 189-196.

Investigation of liquid metal corrosion processes including solution (atom transfer), isothermal and thermal gradient mass transfer and the kinetics of crystallization. Metals included are Cu alloys, liquid Bi, Pb and CrMo steel. (R-general; Bi, Cu-b, Pb, ST)

468-R. Current Status of Alkaline Digester Corrosion as Reported by Regional Digester Group. Jacob B. Morrison, H. M. Canavan and Zane S. Blanchard. Tappi (Technical Assoc. of the Pulp and Paper Industry), v. 44, Mar. 1961, p. 169A-171A.

Summary and evaluation of corrosion data from 22 pulp and paper mills for digesters using 206 carbon steel, stainless steel and Inconel as construction materials, including reports on use of stainless steel. Overlay welding in critical areas of the equipment. (R6j, L24, T29r; CN, SS, Ni-b, 17-57)

469-R. (French.) Oxidation of Uranium in Carbon Dioxide at High Temperature. J. Paidassi, M. L. Pointud, R. Caillat and R. Darras. Journal of Nuclear Materials, v. 3, Feb. 1961, p. 162-174.

Specimens of mechanically polished reactor grade uranium ore treated at 100-700° C. in CO_2 with oxidation being followed simultaneously by gravimetry (using an Eyraud thermobalance) and by micrography. Oxide nuclei growth, blistering and cracking of the thin films formed and plastic deformation of the specimen are determined as a function of temperature and purity of the CO_2. 18 ref. (R1h, 2-62, 2-66; U-a)

470-R. The High Temperature Oxidation of Beryllium. Pt. 3. In Carbon Dioxide, Carbon Monoxide and Carbon Monoxide-Carbon Dioxide Mixtures. S. J. Gregg, R. J. Hussey and W. B. Jepson. Journal of Nuclear Materials, v. 3, Feb. 1961, p. 175-189.

The kinetics of the oxidation reaction of electrolytic flake specimens are measured at 500-750° C. by gravimetry and metallographic methods. 8 ref. (R1h, M-general, 2-62, 2-66; Be)

471-R. The High Temperature Oxidation of Beryllium. Pt. 4. In Water Vapor and in Moist Oxygen. D. W. Aylmore, S. J. Gregg and W. B. Jepson. Journal of Nuclear Materials, v. 3, Feb. 1961, p. 190-200.

The kinetics of the oxidation of electrolytic flake specimens are investigated at 500-750° C. by gravimetric and metallographic methods. 21 ref. (R1h, M-general, 2-62, 2-66; Be)

472-R. Atmospheric Corrosion Tests of Several Delta-Phase Alloys of Plutonium. J. T. Waber, W. M. Olson and R. B. Roof, Jr. Journal of Nuclear Materials, v. 3, Feb. 1961, p. 201-215.

Oxidation of delta-phase, binary Pu alloys containing small additions of Al, Ce, Hf, Zn and Zr is at 75° C. in moist air. Thermochemical and thermodynamics data are given for oxide phase formation. 37 ref. (R1h, R3, P12, P13, 2-60; Pu-b)

473-R. The Compatibility of Beryllium and Uranium Dioxide. A. G. Knapton and K. B. C. West. Journal of Nuclear Materials, v. 3, Feb. 1961, p. 239-240.

Metallographic examination and microhardness measurement of the reaction products of specimen couples of Be with UO_2, U, Fe, Ni or stainless steel heated at 500-1000° C. for times to 224 days. (R-general, M-general; Be, U, Fe, Ni, SS, 14-68)

474-R. (French.) Behavior, Resistance and Hardness of Stainless Steel in Corrosive Atmospheres. Frank. L. LaQue. Revue du Nickel, v. 27, Jan-Feb. 1961, p. 1-9.

Applications of 12% Cr and of 18-8 Cr-Ni steel in architecture. Data for corrosion resistance of openhearth and stainless steel in atmospheres at various geographic locations. 14 ref. (R3, T26n; SS, 17-57)

475-R. (French.) Corrosion Test for Electrolytic Deposits: Corrodkote Test. Revue du Nickel, v. 27, Jan-Feb. 1961, p. 18-19.

Preparation of a corrosive paste composed of $Cu(NO_3)_2$, $FeCl_3$, NH_4Cl and kaolin. Application of the test to Zn alloys and steel. (R11a; ST, Zn-b)

476-R. (Dutch.) Corrosion Tests With Al Alloys. E. M. J. Mulders, W. G. R. de Jager and J. W. Boon. Metaalinstituut T.N.O., v. 5, Dec. 1960, p. 73-84.

Individual samples, weldments and mechanical assemblies of the alloys 2S-H, 3S-H, 57S-H, A56S-H, 23S-T, 51S-T, 75S-T and 50S-T are exposed to the weather of various places for up to 6 1/4 yr. using bolts and nails of an Al alloy, steel, galvanized or Cd plated steel. Effect of corrosion on tensile strength. (R3, Q27a; Al-b)

477-R. (Russian.) Corrosion of Iron in Hardening Salt Baths Containing Nitrides of Sodium, Potassium, Lithium and Barium. V. P. Kochergin, V. N. Savel'ev and E. P. Asanova. Izvestiya Vuz Chernaya Metallurgiya, Oct. 1960, p. 132-138.

Thermal decomposition of nitrides and corrosion rate of Armco iron studied at 450-550° C. in melts containing $NaNO_3$-KNO_3-$LiNO_3$ and their equimolecular mixtures--$NaNO_3$-$Ba(NO_3)_2$, $NaNO_3$-KNO_3 and $NaNO_3$-$LiNO_3$. 18 ref. (R7j, J28k, 2-66; Fe-a)

478-R. Motion Picture Studies of Columbium Oxidation. W. T. Hicks. Metallurgical Society of AIME, Transactions, v. 221, Apr. 1961, p. 218-220.

Visual observation of the oxidation of Cb showing that the protective behavior in the early stages of the reaction below

600° C. and throughout the reaction at 640° C. is associated with an adherent oxide. The oxide moves outward from the metal at 550-935° C. implying that the reaction takes place at the oxide-metal interface. 3 ref. (R1h, P13b, 2-61; Cb, O)

479-R. Effect of Copper on the Corrosion of High-Purity Aluminum in Hydrochloric Acid. M. Metzger, G. R. Ramagopal and O. P. Arora. Metallurgical Society of AIME, Transactions, v. 221, Apr. 1961, p. 250-256.

Single-phase Al containing 0.0001-0.06% Cu is studied in strong acid mainly through observations of hydrogen evolution. The strong influence of Cu on corrosion acceleration is exerted almost entirely through the imposition after a delay time of an autocatalytic localized-corrosion reaction. 18 ref. (R6g, 3-69; Al-a, Cu)

480-R. The Rates of Formation and Structure of Oxide Films Formed on a Single Crystal of Iron. J. Bruce Wagner, Jr., Kenneth R. Lawless and Allan T. Gwathmey. Metallurgical Society of AIME, Transactions, v. 221, Apr. 1961, p. 257-261.

X-ray diffraction and optical microscopy study of spherical specimens between 250-550° C. in oxygen pressure of 10-760 mm. Hg. The relative oxide thicknesses formed per unit time and their composition, orientation and surface topography are determined as a function of substrate structure. 17 ref. (R1h, M-general, 3-71; Fe-a, 14-61)

481-R. Oxidation of Niobium (Columbium) in the Temperature Range 500 to 1200° C. Per Kofstad and Hallstein Kjollesdal. Metallurgical Society of AIME, Transactions, v. 221, Apr. 1961, p. 285-294.

Kinetic studies of the oxidation and structural investigations of the oxidized specimens by X-ray and electron diffraction, electron microscopy and metallographic techniques at 500-1200° C. and 0.1-760 mm. of Hg. The oxidation reaction has a highly irregular temperature dependence and is unusually sensitive to changes in the oxygen pressure. 12 ref. (R1h, M-general, P13b, 2-61, 3-74; Cb, O)

482-R. Oxidation of Columbium Monoxide. W. T. Hicks. Metallurgical Society of AIME, Transactions, v. 221, Apr. 1961, p. 352-356.

The oxidation of CbO is studied by a gravimetric technique at 400-1200° C. in oxygen. The oxidation is characterized by an inductive period of low oxidation rate, which becomes shorter as the temperature increases, followed by a rapid parabolic oxidation. 6 ref. (R1h; Cb, 14-68)

483-R. Ford Experience With Coated Body Steels. Robert J. Saxon. SAE Preprint 323A, 1961, 10 p.

Corrosion resistance of stainless steel coated with Zn and exposed to salt and water. (R4, R6k; SS, Zn, 8)

484-R. (Swedish.) Anodic Protection. Teknisk Tidskrift, v. 91, Mar. 3, 1961, p. 195-200.

Passivation and protection currents and potentials for stainless steel, mild steel, Ti, Hastelloy B and Carpenter 20 in 1 M to 93% H_2SO_4, fuming sulphuric acid, 80% HNO_3, 75-115% H_3PO_4, 20-50% NaOH, saturated $Al_2(SO_4)_3$, 15% Na_2CO_3 and saturated NH_4NO_3 solutions measured at 24-82° C. 6 ref. (R10c; CN, Ni-b, SS, Ti)

485-R. (English.) Diffusion as a Rate-Determining Factor in the Reaction of Copper With Ferric and Cupric Chloride in Aqueous Solution. Eino Uusitalo. Teknillisen Kemian Aikakauslehti, v. 18, Feb. 1, 1961, p. 73-79.

Cu samples are exposed to the action of $FeCl_3$ or $CuCl_2$ solution. Effect of temperature, agitating the Cu sample, addition of $K_2Cr_2O_7$ and acidity on the rate of reaction that is thought to be diffusion-controlled. 9 ref. (R6k; Cu)

486-R. (French.) Corrosion of Cupro-Aluminum Alloys by Desaluminization. I. P. Colnenne. Revue de l'Institut Francais du Petrole, v. 16, Jan. 1961, p. 71-97.

Corrosion resistance of ASTM B111 and B111 bronzes, aluminum bronze, Inoxyda 3 and Inoxyda 90 used as tubing in refrigerating units. (R6k; Cu-b, Al)

487-R. Significant Improvement in Corrosion Testing. Products Finishing, v. 25, Apr. 1961, p. 70, 72, 74.

A new development in accelerated corrosion testing of plated metals by the CASS test is the G-8 "Uni-fog" Dispersion Tower testing unit which provides

uniform collection rates in any geographic location. (R11; 8-62)

488-R. (German.) Influence of Steam Corrosion on Properties of Reactor Material Zircaloy-2. E. Bodmer. Schweizer-Archiv, v. 27, Mar. 1961, p. 114-120.

Long-time corrosion tests of cold worked and 750-1000° C. annealed Zircaloy-2 and ZrNbPd (2% Nb, 0.2% Pd) alloy in steam at a constant temperature of 430° C. at 60 atm. pressure and at temperature cycling from 260-360° C. at 30 atm. pressure. (R4d, R11; Zr-b)

489-R. Aluminum Alloys in the Process Industries. E. D. Verink. I/EC (Industrial and Engineering Chemistry), v. 53, May 1961, p. 66A-69A.

Corrosion resistance, formability, weldability, strength and cost of Cu-bearing and non Cu-bearing Al alloys. Fabrication to produce heat exchangers, piping, conduit, storage tanks, fasteners, fences, screens and architectural structures. (R-general, G-general, K9s; Al-b, Cu)

490-R. Scale on Wire Rod and Its Removal by Mechanical Means. Pt. 2. S. Garber and G. M. Sturgeon. Wire Industry, v. 28, Apr. 1961, p. 369, 371-373, 375-376.

Simulation of scale formation on steel rod during rolling by heating and cooling with metallographic examination of the scale microstructure, thickness, hardness and formation. Kinetics as a function of temperature. Study of influence of surface finish and oxide phase hardness and adherence on susceptibility to mechanical and cathodic descaling. (R1h, F23, L-general, 2-61; ST, 4-55)

491-R. (German.) The Usefulness of Aluminum and Aluminum Alloys in Construction of Water Cooled Atomic Reactors. G. Saur, W. Reinsch and H. Borchers. Atomkern Energie, v. 6, Jan. 1961, p. 30-36.

Review of Al alloys resistant to water and steam corrosion at 200° C. Values for strength and absorption index of Al as influenced by alloying elements, radiation and pH value, pressure and flow rate of cooling water. Evaluation of absorption index of metals including Al, Zr and steel by a graphical method. (R4c, P13d, T11; Al-b, 17-57)

492-R. Adherence and Thermal Performance of Aluminum Enamels and Coatings. G. L. Geltman. Ceramic Age, v. 77, Apr. 1961, p. 73-76.

Flame testing at 2500° F. of uncoated and porcelain enameled Al and Al alloys to determine corrosion and heat resistance. Comparisons with glass, Al oxide and Zr oxide. (R-general, P11; Al-b, 8-71)

493-R. Columbium, Vanadium and Tantalum Base Alloys. Mining Magazine, v. 104, Apr. 1961, p. 215-216.

Oxidation resistance, tensile strength, stress rupture properties and strain rate sensitivity at 2000-3500° F. of Cb, V and Ta base alloys containing Zr, Mo, Al, Ti and W. (R1h, Q27a, Q3m; Cb-b, Ta-b, V-b)

494-R. (Italian.) Anodic Behavior of Platinum in the System H_2O-H_2O_2-O_2. G. Bianchi, G. Caprioglio, G. Davolio, F. Mazza and T. Mussini. Chimica e l'Industria, v. 43, Feb. 1961, p. 146-153.

Anodic development of oxygen on Pt at various current densities. Comparison with the behavior of Au. Reaction between adsorbed oxygen and H_2O_2. 18 ref. (R1h; Pt)

495-R. Low-Temperature Reactions in Copper-Oxygen Systems. National Bureau of Standards, Technical News Bulletin, v. 45, Apr. 1961, p. 61. (Available from U. S. Government Printing Office, Washington 25, D. C.)

No reaction occurs when oxygen is deposited at 40° K. on a Cu specimen, but as oxygen is partially dissociated a thin film forms that remains solid at room temperature. (R1h; Cu)

496-R. Organic and Metallic Finishes. R. J. Brown. Metal Industry, v. 98, Mar. 17, 1961, p. 207-209.

Description of weathering resistance tests on organic finishes involving heat, humidity and ultraviolet light in various overseas locations. Evaluation of metal finishes applied to Fe castings and steel pressings to determine resistance to the effects of oils, fuels and fluids used during manufacture. (R-general; Fe, ST, 8)

497-R. Environmental and Metallurgical Factors of Stress Corrosion Cracking in

High-Strength Steels. Defense Metals Information Center, Battelle Memorial Institute, DMIC Rept. 151, Apr. 14, 1961, 21 p.

Discussion of stress corrosion cracking as the complex interplay of tensile strength and corrosion which leads to cracking. Time to failure and the effect of internal structure and composition. Theories of stress-corrosion cracking. 25 ref. (R1d; ST, SGB-a)

498-R. (German.) Influence of Copper on Corrosion Behavior and Mechanical Properties of Chromium-Nickel Steels. Thonnangamath Ramchandran, Karl Roesch and Hans Jurgen Engell. Archiv fur das Eisenhuttenwesen, v. 32, Mar. 1961, p. 173-185.

Corrosion testing in 10-75% H_2SO_4 at 20-80° C., measurement of current density-potential in 2N H_2SO_4 at 80° C., investigation of intercrystalline corrosion in boiling $CuSO_4$-H_2SO_4 solution, age hardening tests at 400-600° C., tensile and notch impact testing and test welding of alloy steel (8-28% Cr, 4-8% Ni) containing 0-6% Cu. Properties as influenced by Cu. (R6g, R2h, Q27, Q6, 2-60; ST, Cu)

499-R. Reaction of Copper and Fluorine From 800-1200° F. Patricia M. O'Donnell and Adolph E. Spakowski. NASA Technical Note D-768, Apr. 1961, 15 p. (Available from National Aeronautics and Space Administration, Washington, D. C.) $.50.

Effect of preheat conditions, time and temperature on the fluorination of Cu foil. 14 ref. (R6q, 2-61; Cu, 4-56)

500-R. Review of Recent Developments on Oxidation-Resistant Coatings for Refractory Metals. W. D. Klopp. Defense Metals Information Center, Battelle Memorial Institute, DMIC Memo. 102, Apr. 26, 1961, 3 p. (Available from U. S. Office of Technical Services, Washington, D. C.)

Properties given for corrosion resistant coatings formed by vacuum distillation, electrodeposition, hot dipping on Cb, Mo and Ta. Coatings include Zn, aluminide, beryllide, silicide and Cr alloy. 7 ref. (R1h; Cb, Mo, Ta, 8)

501-R. Field Corrosion Tests. Southern Power & Industry, v. 79, May 1961, p. 66, 68.

Insulation by teflon washers and sleeves of pipeline valves composed of Hastelloy C, 304 and 316 stainless steel, Aloyco 210 and 25-12S prevents corrosion of the valves. (R10c, T26r; Ni-b, SS)

502-R. (Russian.) Penetration of Silver Into Tungsten. V. I. Rakhovsky, A. P. Lubimov and V. M. Garmash. Academy of Science of the USSR, Reports, v. 135, Apr. 1960, p. 906-908.

A tungsten laminate is immersed in radioactive liquid Ag a number of times at up to 1000-1080° C. Increase of speed of penetration is observed with rising temperature. Diffusion does not occur and the process is explained as intercrystalline erosion. (R1c, R6m, 2-62; W, Ag)

503-R. Corrosion in Cryogenic Liquids. James D. Jackson. Chemical Engineering Progress, v. 57, Apr. 1961, p. 61-64.

Corrosion behavior and mechanical properties of highly stressed Ti, Al, Ni and other metals for missile systems in liquid oxygen and fluorine. (R6q, 3-66, T24e; Al, Ni, Ti)

504-R. New Alloys for Extreme Conditions. E. G. Holmberg. Chemical Engineering Progress, v. 57, Apr. 1961, p. 74-78.

Various Ni base alloys, stainless steels, Ti, Zr and Mo are tested for corrosion resistance to liquified gases for low-temperature application as fuel containers. Tensile properties, Charpy impact and stress corrosion cracking determined. Cr content effects corrosion resistance to HNO_3. 13 ref. (R7d, Q27, Q6; Mo, Ni-b, SS, Ti, Zr)

505-R. The Determination of the Effects of Elevated Temperatures on the Stress Corrosion Behavior of Structural Materials. Armour Research Foundation of Illinois Institute of Technology (Wright Air Development Division). U. S. Office of Technical Services, PB 161962, May 1960, 53 p. $1.50.

Dissolution rates of anodized oxide films on a Ti-Al-V alloy determined from 800-1000° F. Tests show conclusively that oxide film protection is lost by direct reaction with chloride salt. (R1d, 2-61; Ti-b, Al, V)

506-R. Nitrogen Tetroxide Corrosion Studies. C. W. Alley. Allied Chemical Corp. (Wright Air Development Division). U. S. Office of Technical Services, PB 171301, July 1960, 40 p. $1.75.

Corrosive effects of nitrogen tetroxide on mild steel, Al, stainless steels and Ti under static conditions at six water concentrations up to 3.2 wt. % and four temperatures up to 74° C. (R6; Al, CN, SS, Ti)

507-R. Compatibility Between Solid and Liquid Metals. F. L. Bett. Paper from "Australian Atomic Energy Symposium". Melbourne University Press, Melbourne, Australia, 1958, p. 201-205.

Definition, reduction and assessment of compatibility between solid and liquid metals illustrated by investigation into compatibility of Cb with liquid Na. 7 ref. (R6m; Cb)

508-R. Influence of the Silicon in Cast Iron on Corrosive Wear. R. Graham, O. S. Prado, M. H. Collins, E. A. Brandes and H. K. Farmery. Institution of Mechanical Engineers, Proceedings, v. 174, no. 19, 1960, p. 617-634.

Samples of diesel engine liners containing 0.59-2.96% Si are tested by simulated wear conditions, acid immersion and exposure to acid condensation to determine the corrosive effect of Si. 5 ref. (R-general, Q9, T21b; CI, Si, 17-57)

509-R. (French.) Aqueous Corrosion of Stainless Steel. L. Colombier. Metallurgie et la Construction Mecanique, v. 93, Feb. 1961, p. 131-133.

Action of accelerators and inhibitors on corrosion resistance. Mechanism of inhibition. 43 ref. (R10b; SS)

510-R. (German.) Corrosion of Steel in Concrete by Calcium Chloride. J. Tomek and F. Vavrin. Zement Kalk Gips, Mar. 1961, p. 108-112.

Corrosion testing of reinforcing steel (0.2% C, 0.04% Si, 0.33% Mn), aged in concrete of various porosity and $CaCl_2$ content, by optical assessment and electrical resistance and potential measurements. Structure investigation of rust by X-ray examination. (R1h, R6, R11m; ST)

511-R. (German.) Passivation and Corrosion Resistance of Technical Iron Alloys. Anton Koniger. Forschungsberichte des Landes Nordrhein-Westfalen, no. 968, 1961, 4 p.

Measurement of corrosion potentials of commercial Fe alloys and of a binary Fe-Pd (0.05% Pd) alloy in HNO_3 of varying concentration. Influence of alloying elements and heat treating on potential. (R6b, R10c, R11m, 2-60, 2-64; Fe-b, Pd)

512-R. Stress Corrosion of Notched and Unnotched AM-350 Alloy. Wright Air Development Division. U. S. Office of Technical Services, PB 161998, May 1960, 14 p. $.50.

A 3 1/2% sodium chloride solution is used. With the specimen stressed to 60% of the 0.2% offset yield strength, all of the unnotched specimens failed within 150 hr. and none of the notched specimens failed after 800 hr. Stress raisers such as mechanically induced notches do not have an appreciable effect on the susceptibility of an alloy to stress corrosion cracking. (R1d, R11s; SS)

513-R. Oxidation of Metals. W. W. Smeltzer and J. M. Perrow. I/EC (Industrial and Engineering Chemistry), v. 53, Apr. 1961, p. 319-324.

Review of current studies on the theory of oxidation, metal and alloy oxidation processes and metal oxides. (R1h)

514-R. Dynamic Corrosion Testing With Water and Steam. F. Muller. Nuclear Power, v. 6, May 1961, p. 68-70.

A steam and H_2O circuit is designed and constructed to study susceptibility to corrosion of reactor materials. Zr and Zircaloy-2 are tested for embrittlement after H_2 absorption at 300-500° C. under 1422.3 lb. per in.^{2} of steam pressure. (R11, T11; Zr-b)

515-R. International Corrosion Congress. Corrosion Prevention and Control, v. 8, Apr. 1961, p. 37-53.

Summaries of papers presented at the First International Congress on Metallic Corrosion, Imperial College, London, Apr. 10-15. Topics include corrosion mechanisms, corrosive effects, protective methods, effects of coatings and environments, structural and mechanical property effects, and metallographic study and measurement of corrosion of metals and alloys such as Al, Ti, Ni, Zn, Zr, Cu, brass, alloy and stainless steels, Fe and Mg. (R-general, 10-54; Al-b, Cu-b, Ni-b, Fe-b, Zr-b, Zn-b, Mg-b, ST)

516-R. Corrosion Problems and Their Treatment. Corrosion Prevention and Control, v. 8, Apr. 1961, p. i-v.

Corrosion protection of steel ship hulls by painting, coating and cathodic protection. (R10, L-general, T22g; ST)

517-R. Factors in the Choice of Corrosion-Resisting Materials of Construction. C. M. Schillmoller and F. L. LaQue. Paper from "Extractive Metallurgy of Copper, Nickel and Cobalt". Interscience Publishers, Inc., New York 1, 1961, p. 85-129.

Characteristics of Cu, Ni and Co refining electrolyte solutions and effects of process variables on corrosion mechanisms and resistances of the refined metals. Comparative behavior of metals, alloys and nonmetals in acid solutions with emphasis on special alloys such as Si bronze, Monel, Ni-o-nel, Illium 6, Duriron, Corrosiron, Labour R55, stainless steel and Hastelloy and Chlorimet types. Applications of materials in corrosive environments. 8 ref. (R-general, C23p, 10-54; SGA-g, Cu-b, Co-b, Ni-b, SS, Fe-b, 17-57)

518-R. (French.) Predetermination of Corrosion Conditions for Metals and Alloys. M. Pourbaix. Corrosion et Anticorrosion, v. 9, Feb. 1961, p. 47-62.

Electrochemical thermodynamics including plotting and interpretation of equilibrium diagrams of stress and pH and predetermination of theoretical corrosion conditions for immunity and passivation of metals. Electrochemical kinetics with experimental determination of curves of stress and current in electrolysis. Application of results. (R1)

519-R. (Italian.) Influence of Triethanolamine and Glycerine on the Corrosion of Aluminum in an Alkaline Environment. Natale Genova. Pitture & Vernici, v. 36, Dec. 1960, p. 1077-1083.

Effect of variations in time and concentration of corrosive agent on Al corrosion. Protection afforded by varying concentrations of glycerine. 10 ref. (R6j, R10b; Al)

520-R. Corrosion Mechanisms. M. Krulfeld and M. C. Bloom. Report of NRL (Naval Research Laboratory) Progress, Apr. 1961, p. 41-44.

Protective Fe_3O_4 and gamma-Fe_2O_3 films formed on mild steel specimens by exposure to LiOH stabilizing solutions and to distilled water at 600° F. for various time are examined metallographically and by flame spectrophotometry after exposure to air saturated water at room temperature. Effect of Li stabilization on film breakdown and corrosion of the specimen. (R1h; CN)

521-R. Cathodic Protection Studies. L. J. Waldron and M. H. Peterson. Report of NRL (Naval Research Laboratory) Progress, Apr. 1961, p. 44-45.

Influence of Al, Cd and Si alloy additions and of Fe impurities on the effectiveness of Zn sacrificial anodes in cathodic protection of ships. (R10d, 2-60, 3-69; Zn, Al, Cd, Si, Fe)

522-R. The Pitting of Lubricated Gear Teeth and Rollers. Pt. 2. P. H. Dawson. Power Transmission, v. 30, May 1961, p. 286-290.

Growth of a pitting crack propagated by cyclic stressing is shown to be dependent on the magnitude of the stress and on the oil pressure. 13 ref. (R2j, T7a)

523-R. (German.) Corrosion Protection by Pigments. J. D'Ans and V. Groope. Deutsche Farben-Zeitschrift, v. 15, Mar. 1961, p. 99-104.

Corrosion potential measurement of chromated steel sheets in chromic acid solutions of various concentration. Potential curves as influenced by acid concentration, chloride, fluoride and sulphate ions are compared with curves of lacquered and caoutchouc-coated steel sheet. (R-general, L14, L26, 1-54; ST, 4-53)

524-R. (German.) Subsurface Corrosion of Lacquered Steel. Formation-Detection-Control. J. A. W. van Laar. Deutsche Farben-Zeitschrift, v. 15, Mar. 1961, p. 104-117.

Corrosion tests on cold rolled steel sheet having various paint, lacquer, wash-primer, pigment and plastic protective coatings in laboratory climate chambers at varying humidity and temperature, by salt water spray and by weathering in open air. (R11; ST, 8-70)

525-R. (English.) Mechanism of Grain Boundary Corrosion of Aluminium in High-Temperature Water. Sueo Nomura. Review of Physical Chemistry of Japan, v. 30, Dec. 1960, p. 100-108.

Metallographic and electrochemical study of grain boundary corrosion of Al in high-temperature water. Governing factors include diffusion of hydrogen atoms, over-voltage of hydrogen from Al water reaction and surface film properties on Al. 11 ref. (R4; Al)

526-R. (Japanese.) Method of Evaluation of Corrosion Test Results in Grid Alloys. Toshio Ishikawa, Hiroshi Tagawa and Akira Ishikawa. Japan Institute of Metals, Journal, v. 25, Feb. 1961, p. 147-151.

Corrosion tests on Pb and Pb-1.8% Sb alloy storage battery grid plate specimens in H_2SO_4. A method is suggested for measuring corrosion resistance and consequently battery life, in terms of weight loss after the corrosion process has become stabilized, rather than from beginning to end, as a function of time. 12 ref. (R1; Pb-b)

527-R. Mechanism of the Iron-Hydrogen Sulphide Reaction at Elevated Temperatures. Hans Arm, Paul Delahay, Charles Hudgins, Fritz Hugli, Lester Hulett and Mohsin Qureshi. Paper from "Proceedings--American Petroleum Institute". Section 3. v. 40. American Petroleum Institute, New York 20, 1960, p. 117.

Reaction is studied at 500-760° C. for a total gas pressure of 1 atm. Rate of attack is essentially constant and the corrosion scale is composed of two layers, a thin dense layer adjacent to the metal and a porous layer with a coarse crystalline structure. (R6r; Fe)

528-R. Corrosion Inhibitors in Refinery Process Streams. D. L. Burns, R. L. Hildebrand and Paul D. Thomas. Paper from "Proceedings--American Petroleum Institute". Section 3. v. 40. American Petroleum Institute, New York 20, 1960, p. 155-162.

Information on the mechanism of corrosion inhibition, temperature limitations, detergent action and chemical composition of the high-molecular-weight organic inhibitors commonly used in the refining industry. 19 ref. (R10b, T29n)

529-R. Oxidation of Niobium. Tor Hurlen. Institute of Metals, Journal, v. 89, Apr. 1961, p. 273-280.

The reaction of Cb with oxygen at 10^{-2} to 760 mm. Hg pressure and 150-1000° C. is studied by gravimetric and volumetric rate measurements and by X-ray diffraction, electron diffraction, electron microscopy and metallographic techniques. Data are given for oxidation rate kinetics as influenced by time, temperature, pressure and solution of oxygen in the Cb lattice. 34 ref. (R1h, M-general, S11, 2-61, 3-67, 3-74; Cb)

530-R. Further Observations on the Uniform Corrosion of Aluminium Alloys in High-Pressure Steam. J. N. Wanklyn and N. J. M. Wilkins. Institute of Metals, Journal, v. 89, Apr. 1961, p. 289-291.

Corrosion tests on Aereal 1 (2.5% Ni) and Fe-Ni-SAP Al alloys in steam at 1000 lb. sq. in. pressure at 325° C. for various times and flow rates to investigate the pressure dependence of the corrosion rate. Dryness of the steam is postulated as being possibly more rate-controlling than pressure. (R4d, 3-74; Al-b, Ni, Fe)

531-R. (French.) Corrosion-Resistant Alloys in the Chemical Industry. L. Colombier. Corrosion et Anticorrosion, v. 9, Mar. 1961, p. 87-92.

Behavior of steels and stainless alloys (17, 18-10, 18-10 Mo, 20-8 Mo Cu, 20-25 Mo Cu, Hastelloy B and C) toward mineral or organic acids and aggressive salt solutions. (R6g, R7b; Ni-b, SS)

532-R. The Silver-Silver Oxide Electrode. Pt. 1. Anodic Oxidation in Alkaline Solutions. Charles P. Wales. Electrochemical Society, Journal, v. 108, May 1961, p. 395-400.

Ag electrodes are anodized at 25° C. in 35 or 50% KOH at constant current. The discharge capacity is higher in 35% KOH than in 50% KOH except at low charging rates. During charging at the Ag_2O/AgO plateau, Ag_2O oxidizes to AgO, then the prevailing reaction is Ag oxidizing to AgO with same AgO reacting with Hg to give Ag_2O. Under same discharge conditions AgO may reduce directly to Ag with same formation of Ag_2O. 18 ref. (R1h; Ag)

533-R. Inhibition by Ferric Sulphate of the Dissolution of Iron and Stainless Steel. A. C. Makrides. Electrochemical Society, Journal, v. 108, May 1961, p. 412-416.

$Fe_2(SO_4)_3$ concentration required to produce passivity in 410 stainless steel and other metals is determined by the critical current density of the metal and exceeds the concentration required to maintain activity by about two orders of magnitude. Pure iron has a very large critical current density and is not protected by ferric ion in acid solution unless first made passive with impressed anodic current. 6 ref. (R10b; Fe, SS)

534-R. The Equivalent Series Resistance of Anodically Formed Oxide Films on Aluminum. Walter J. Bernard. Electrochemical Society, Journal, v. 108, May 1961, p. 446-449.

A cell is constructed for measuring the resistance of anodic oxide films on Al. The resistance is directly proportional to film thickness; other factors affecting resistance are studied. 5 ref. (R1h, P15g; Al)

535-R. An Ultrastructure Study of the Corrosion of Aluminum in the Presence of Mercury. A. N. J. Heyn. Electrochemical Society, Journal, v. 108, May 1961, p. 482-483.

The discontinuous arrangement of whiskers and fibrils of oxide formed on Al by reaction with Hg or Hg containing Pb or Tl in the presence of moist air is studied by electron microscopy. (R-general, N12n, M21e; Al)

536-R. Specialists Against Corrosion. Adrian Seligman. Australian Machinery and Production Engineering, v. 14, Apr. 1961, p. 63, 65-67.

Corrosion protection is provided for steel ships, tankers, pipeline, aircraft and machinery by covering with a tannin solution which combines with the oxides on already-corroded metals to form a hard and insoluble tannate film which halts further corrosion. Tannins are nonacid, nontoxic and provide protection for ferrous and nonferrous metals. (R10g; ST)

537-R. (German.) Anodic Oxidation of Oxalic Acid on Platinum. Pt. 1. Passivation of a Bright Platinum Electrode. J. Giner. Electrochimica Acta, v. 4, May 1961, p. 42-54.

Anodic passivation of Pt electrode in 1 N H_2SO_4 occurs by means of a separation of oxygen from water at the Pt anode with formation of a layer of chemisorbed oxygen which retards oxalic acid oxidation. Removal of chemisorbed oxygen by cathodic reduction or by slow reduction by the oxalic acid itself (self-activation). 11 ref. (R10c, L19; Pt)

538-R. Corrosion Research in India. Corrosion Prevention & Control, v. 8, May 1961, p. 40.

Review of research on atmospheric and aqueous corrosion, inhibition and cathodic protection of brass, phosphor, bronze, mild steel, Cu, admiralty brass and zinc. (R10b, R10d; CN, Cu-b, Zn)

539-R. Corrosion Problems and Their Treatment. Pt. 9. Corrosion Prevention & Control, v. 8, May 1961, p. iv-vii.

Comparison of cathodic protection, plastic coating and painting for protecting surfaces of steel jetties and piers under and above water. (R10, T26; ST)

540-R. Oxidation of Columbium. Digest of "Oxidation of Binary Niobium Alloys". NASA Technical Note D-283, Lewis Research Center, Cleveland, Nov. 1960, 27 p. C. H. Barrett and J. L. Corey. Metal Progress, v. 79, June 1961, p. 176-177.

Oxidation characteristics of Cb-base alloys containing up to 25% of alloying elements. Data are given on the effect of an oxidation rate of V, Al, Ti, Fe, Cr, Re, Si, Zr, Ta, Mo, Co, Cu and Ir. (R1h, 2-60; Cb)

541-R. Surface Reconditioning of the Key West Water Pipeline. Kurt A. Gruber. Corrosion, v. 17, May 1961, p. 20.

Processes used in reconditioning include sandblasting, patching, priming, coating with hot and cold bituminous enamel and installation of cathodic protection system. (R10, T26r)

542-R. High Temperature Sulphur Corrosion of Intermediate Range Chromium Steels. R. E. Hannum. Corrosion, v. 17, May 1961, p. 201t-202t.

Corrosion rates of steels containing up to 9% Cr and of types 316 and 405 stainless steels in the sulphur environment of a thermal desulphurization unit. (R6q; SS)

543-R. Corrosion of Nickel-Based Alloys in High Temperature Nitrogen Environments.

J. S. Brunhouse and G. W. Titus. Corrosion, v. 17, May 1961, p. 203t-207t.

Corrosion rates and mechanical properties of Inconel, Inconel X, Inconel 702, Hastelloy X, Hastelloy R-235 and Inor 8 after prolonged exposure from 1750° F. to N_2 + 0.5% O_2 are determined in a program to select fuel element claddings for a gas-cooled reactor. (R6q, Q-general; Ni-b)

544-R. Effect of Acid Volume and Inhibitor Quantity on Corrosion of Steel Oil Field Tubing. William E. Billings and David Morris. Corrosion, v. 17, May 1961, p. 208t-211t.

Efficiency of ethoxylated rosin amine, arsenic, hexynol and dibutylthiourea as corrosion inhibitors in 15% HCl and the influence of acid volume-steel surface area ratio on the corrosion rate of SAE 1051 steel. (R10b; ST, 4-60)

545-R. New Methods of Simulating Corrosive Plant Conditions in the Laboratory. A. Orman Fisher. Corrosion, v. 17, May 1961, p. 215t-221t.

Apparatus for high temperature, high pressure measurements of corrosion under heat transfer conditions. Corrosion data for various stainless steels, Inconel, Multimet, Hastelloy C, Haynes Alloy 25, Ti, Zr, A285 steel. (R-general, 1-54; Ni-b, SS, ST, Ti)

546-R. Cathodic Polarization of Steel in Salt Water. A. R. Erben. Corrosion, v. 17, May 1961, p. 222t-226t.

Effect of temperature, organic acid and corrosive gases on the current required for cathodic polarization of 1020 steel. (R10d; ST)

547-R. Welded Stainless Steels for Hot Hydrogen Sulfide Service. Frank J. Bruns. Corrosion, v. 17, May 1961, p. 227t-231t.

Effects of welding and various heat treatments on the corrosion by hot H_2S in a hydrodesulphurizer effluent of 201, 202, 304L, 347, 304, 430, 316L, 321, 410 stainless steels and Tenelon. Aqueous corrosion tests on seam welded tubing of 304 and 304L stainless steels. (R6p, R4, 2-64; SS, 7-51)

548-R. Development of a Mineral Scale Inhibitor. L. W. Jones. Corrosion, v. 17, May 1961, p. 232t-236t.

Efficiency of various sequestrants, surface active agents, colloids and mixed compounds for the inhibition of deposition of sulphate and carbonate scales on brass tubing in heated aqueous solutions. (R10b; Cu-n, 4-60)

549-R. Corrosion of Aluminum Alloys in High Purity Water in the Range 150C-340C. D. F. MacLennan. Corrosion, v. 17, May 1961, p. 239t-242t.

Examination of the cross section of the film on Al, while attached to the metal, shows that the second-phase particles play an important part in the corrosion pattern. Corrosion rates are illustrated by 25 and 157 Al alloys. (R4e, 2-61; Al-b)

550-R. Laboratory and Service Evaluation of Aluminized Steel Wire. Jane H. Rigo. Corrosion, v. 17, May 1961, p. 245t-250t.

Corrosion resistance of aluminized as compared with galvanized steel wire in marine, industrial and semirural atmospheres. Specification tests for uniformity and porosity of the Al coating. (R3, L16; ST)

551-R. A Discussion of the Possible Role of Autoreduction in the Passivation of Iron. E. E. Nelson. American Society of Naval Engineers, Journal, v. 73, May 1961, p. 327-330.

Effect of inhibitors, solution acidity and impressed current on corrosion and pitting action is studied to show the role of autoreduction and reduction in solution of a film of ferric oxide by Fe acting as an anode. (R10c; Fe)

552-R. The Corrosive Behavior of Non-Ferrous Metals in Sea Water. T. Howard Rogers. American Society of Naval Engineers, Journal, v. 73, May 1961, p. 387-393.

Corrosion resistance of Al, brass, bronze, Cu alloys containing Ni, Sn and Pb alloys, gunmetals and Zn in marine applications. (R4b; Al, Cu-b, Ni-b, Pb-b, Sn-b, Zn)

553-R. (English.) Surface Energy Mechanism for Stress-Corrosion Cracking. E. G. Coleman, D. Weinstein and W. Rostoker. Acta Metallurgica, v. 9, May 1961, p. 491-496.

Stress-corrosion cracking is proposed as a process in brittle fracture whereby the surface energy associated with crack formation is reduced by the adsorption

of atom or ion species in the stress-corrosion medium. The grain size dependence of stress-corrosion cracking stress in tensile loading is studied in two stress-corrosion systems, 304 stainless steel in $MgCl_2$ and Mg-5.56 Al alloy in NaCl-K_2CrO_4-H_2O solution. 7 ref. (R1d, R6, P13h, 2-59; SS, Al-b)

554-R. (French.) Oxidation of Uranium in Carboxylic Anhydride at High Temperatures. J. Paidassi, M. L. Pointud, R. Caillat and R. Darras. Acta Metallurgica, v. 9, May 1961, p. 515-518.

Specimens of 99.94% uranium are reacted in gaseous carboxylic anhydride at 300-700° C. with subsequent gravimetric and metallographic analysis of oxide scale formation mechanisms and composition, surface cracking and distortion phenomena, and pellicle and film formation. 9 ref. (R1h, 2-62; U)

555-R. (Translation-ConBur.) Thin Oxide Films on Titanium, Zirconium, Molybdenum and Titanium Alloys. V. V. Andreeva and E. A. Alekseeva. Academy of Sciences of the USSR, Proceedings, Physical Chemistry Section, v. 134, Sept-Oct. 1960, p. 793-797.

Kinetics of oxidation of Ti, Zr, Mo and alloys of Ti with Al, Cr and Mo from 50-400° C. Results indicate that appreciable oxidation occurs at 50° C. with Zr, at 100° C. with Ti and Ti-Mo alloy and at 150° C. with Mo and Ti-Cr and Ti-Al alloys. 12 ref. (R1h; Mo, Ti-b, Zr)

556-R. New Data Predict Corrosion Rates in Sour Crude Units. G. R. Port. Petroleum Refiner, v. 40, May 1961, p. 154-158.

Furnace tubes of 5% chromium steel are replaced by 7-12% chromium steel with corrosion rates being measured for various times from 600-670° F. for the effect of velocity, charge rate and temperature on corrosion rate. 4 ref. (R7a, T29n; SS, 17-57)

557-R. Accelerated Cavitation Erosion and Sand Erosion. W. C. Leith and W. S. McIlquham. ASTM Preprint no. 93a, 1961, 16 p.

Comparative scales for metals selection based on cavitation erosion tests and sand erosion tests. Cavitation erosion in diesel engines, hydraulic pumps and water turbines discussed. Additives for diesel cooling water evaluated. 11 ref. (R2m)

558-R. Salt Water Ingestion by Gas Turbine Engines. Ted F. Stirgwolt. American Helicopter Society, Inc. Seventeenth Annual National Forum, Proceedings, May 1961, p. 64-70.

Methods for controlling salt deposition and corrosion in gas turbine engines of helicopters. Formation of salt water droplets. Measurement of salt water content and drop size. Maintenance of engine performance by deposit removal. Effect of wash procedure on corrosion and blade fatigue life. 4 ref. (R4b, W11m)

559-R. (German.) Problems in Rust Control. Bruno Waeser. Deutsche Farben-Zeitschrift, v. 15, Apr. 1961, p. 151-160.

Theory of rusting mechanism including composition and structure of various rust types. Rust protection by coating, use of wash primers, painting of wet iron surfaces and application of inhibitors in Fe, protective paint or corrosive agent. 61 ref. (R1h; Fe)

560-R. (French.) Protection of Steel by Combined Methods. Outline of the Work at Gaz de France and I. R. S. I. D. A. Hache. Corrosion et Anticorrosion, v. 9, Apr. 1961, p. 111-118.

Corrosion by sulphate-reducing bacteria, H2S and sea water. Use of inhibitors, paints, pigments and plastics for surface protection of gas pipes. 9 ref. (R4b, R10, T26r)

561-R. (French.) Statistical Study of Intercrystalline Corrosion of 18-8 Stainless Steel. F. Gobin. Corrosion et Anticorrosion, v. 9, Apr. 1961, p. 119-131.

Intergranular corrosion of 18-8 austenitic steel as affected by carbon content, size of grains and presence of Ti or Cb as stabilizing elements. A formula is derived calculating safe minimum carbon content. (R2h, 2-60; SS-e)

562-R. New Oils Lick Rust Problem. W. N. Redstreake. Iron Age, v. 187, June 8, 1961, p. 92-93.

Development of a volatile corrosion-inhibitor oil consisting of lubricating vehicle, contact inhibitor and vapor producing component which produces

rust-inhibiting vapors when used as a lubricant for ferrous parts. (R10g; Fe)

563-R. (French.) High-Temperature Corrosion by Gas With High Concentration of Hydrogen Sulphide and Sulphur. Ph. Marchessaux. Institut Francais de Petrole, Revue, v. 16, Feb. 1961, p. 184-193.

Study of corrosion in a sulphur-producing furnace as a function of design, temperature and refractory materials. Chemical and X-ray analysis of sulphide produced by corrosion. (R7k)

564-R. Galvanic Corrosion. F. L. LaQue. Chapter 9 from "Handbook of Mechanical Wear". University of Michigan Press, Ann Arbor, Mich. 1961, p. 175-198.

Nature of galvanic corrosion including galvanic action as related to corrosion in and around crevices and to pitting. Conditions necessary for corrosive attacks and methods for control. Galvanic corrosion of Mg alloy, Zn, Al and Al alloy, Cd, wrought and cast iron, mild low alloy and stainless steel, Pb, Sn, Cu, brass, bronze, Ni and Ni alloy. Couples and solders in sea water. 13 ref. (R1a)

565-R. Accelerated Cavitation Research. William J. Rheingans. Chapter 10 "Handbook of Mechanical Wear". University of Michigan Press, Ann Arbor, Mich., 1961, p. 199-235.

Vibratory method of accelerated cavitation testing. Effects of amplitude of vibration, depth of submergence and different test liquids on rate of pitting. Cavitation resistance of cast rolled welded or sprayed stainless steels, cast steels, cast rolled or welded Ampco bronzes, welded or sprayed Colmonoy, Thiokol, rubber overlay, Stellite, toolsteels and brasses. 43 ref. (R11r, R2m; SS, ST, Cu-s, Ni-b, TS, Cu-n)

566-R. Fretting and Fretting Corrosion. J. R. McDowell. Chapter 11 from "Handbook of Mechanical Wear". University of Michigan Press, Ann Arbor, Mich., 1961, p. 236-251.

Nature and theory of the mechanism of fretting corrosion. Effects of motion, pressure, frequency, humidity, lubrication, hardness, temperature, coefficient of friction and atmosphere. Identification and prevention of fretting corrosion. 36 ref. (R1f, 2-61, 3-74, R10)

567-R. Corrosion at High Temperatures. M. J. Tauschek. Chapter 12 from "Handbook of Mechanical Wear". University of Michigan Press, Ann Arbor, Mich., 1961, p. 252-273.

Theory of high-temperature oxidation of metals. Corrosion resulting from metal oxides in combustion gases as in gasoline engine exhaust valves. Accelerated corrosion tests and relation to service experience. Effects of Cr, Ni and Si content on the resistance of Fe-Cr-Ni alloys to metal-oxide attack. 7 ref. (R-general, R1h, 2-62, 2-60; Fe-b, Cr-b, Ni-b, SGA-g)

568-R. Abrasive Wear of Metals. T. E. Norman. Chapter 13 from "Handbook of Mechanical Wear". University of Michigan Press, Ann Arbor, Mich., 1961, p. 277-314.

Occurrence in mining, earth moving, mineral benefication and other industrial operations of gaging, high-stress grinding and low-stress erosion and abrasive wear. Wear rate of abrasion-resistant materials for each type. Influence of mechanical properties and relative toughness of high Cr irons, Ni-Cr martensitic white irons, pearlitic and chilled irons, martensitic steels, pearlitic low-alloy steels and austinitic steels. 16 ref. (R1c, Q9n, 3-66, Q-general; Fe-b, Cr, CI, ST, SGA-m)

569-R. (German.) Oxidation of Ni-Cr Heating Conductor Alloys. Volker Schumacher. Zeitschrift fur Metallkunde, v. 52, Apr. 1961, p. 280-284.

Measurement of oxidation of NiCr (80% Ni) heating conductor alloy with and without additions of Ce and Ca and their oxides during continuous and discontinuous heating in air from 1000-1200° C. Lifetime as influenced by scaling modulus. (R1h; Ni-b, Cr)

570-R. Corrosion Mechanisms (The Effect of Phosphate on the Corrosion of Steel in Aqueous Media at 316° C). W. A. Frazer and M. C. Bloom. Report of NRL (Naval Research Laboratory) Progress, May 1961, p. 28-29. (Available as PB 171318 from U. S. Office of Technical Services, Washington 25, D. C.) $1.25.

Mild steel capsules filled with disodium phosphate dodecahydrate are tested for various times to 30 days with comparison of corrosion rate to data for capsules filled with distilled

water and sodium hydroxide. Catastrophic pitting is a function of concentration of solutions and of protective film formation. (R6j; CN)

571-R. Alloy Stops Corrosion in Fluid Coker. Kenneth L. Moore. Petroleum Refiner, v. 40, May 1961, p. 149-153.

Severe high-temperature sulphide corrosion in a fluid coke burner is controlled by altering the burner atmosphere and by using corrosion-resistant 12% Cr Steel in internal parts. (R7k, W16a; SS, 17-57)

572-R. The Cathodic Protection of Buried Steel Pipelines. L. A. Woodworth and F. P. A. Robinson. South African Mechanical Engineer, v. 10, Apr. 1961, p. 231-257.

External corrosion of buried steel pipelines can be prevented by cathodic protection procedures involving polarizing the structure to the open circuit anode potential or building of films resulting from alkaline conditions produced. Soil resistivity and corrosion measurements are important criteria of the protective system. 29 ref. (R10d, T26r; ST, 17-57)

573-R. (German.) Corrosion Testing in Laboratories. Wilhelm Wiederholt. Materialprufung, v. 3, Apr. 20, 1961, p. 137-146.

Review of laboratory methods for various atmospheric tests, short-time tests in liquid solutions and tests at high pressures and flow rates. 22 ref. (R11)

574-R. (German.) Relations Between Annealing and Corrosion Behavior of Hardenable Stainless Chromium Steels. Anton Baumel and Carl Carius. Archiv fur das Eisenhuttenwesen, v. 32, Apr. 1961, p. 237-249.

Corrosion resistance (measured in terms of weight loss in boiling acetic acid and by measuring passivation) and hardness as influenced by annealing (up to 700° C.), for hardened knife steel with 0.4-1.1% C, 14-18% Cr and 0-1% Mo. X-ray investigation of precipitated carbides. (R-general, Q29n, 2-64; SS)

575-R. (German.) Oxygen Absorption of Reactor Grade Zirconium on Annealing in Air. G. Saur, H. J. Laue and H. Borchers. Metall, v. 15, May 1961, p. 409.

Measurement of oxygen absorption by hardness measurements on polished cylindrical reactor grade Zr specimens (15 mm. diameter, 15 mm. high) after 5 hr. annealing in air at 600-900° C. Thickness of scale layer. (R1h, J23, Q29n; Zr)

576-R. Design for Corrosion Prevention. Australian Mechanical Engineering, v. 48, Apr. 5, 1961, p. 51-54.

Comparative corrosion resistance of a number of metals; factors influencing material selection in corrosive environments. (R-general, 17-51)

577-R. (Translation-ConBur.) Mechanism of Oxidation of Copper by Liquid Sulfur Using the S^{35} Isotope. I. I. Pokrovskii and M. M. Pavlyuchenko. Academy of Sciences of the USSR, Proceedings, Physical Chemistry Section, v. 134, May 12, 1960, p. 391-393.

Relation of sulphide layer formation and grain growth to grain boundary diffusion of Cu and sulphur in specimens oxidized from 400-444° C. for various times. 4 ref. (R1h, N1; Cu)

578-R. High Temperature Oxidation of Fe-Cr Base Alloys With Particular Reference to Fe-Cr-Y Alloys. Edward J. Felten. Electrochemical Society, Journal, v. 108, June 1961, p. 490-495.

Fe-Cr alloys containing 25-37.5% Cr and small amounts of Y, Al, Ga, La, Gd, Dy or Er are oxidized between 700-1200° C. Agreement with the parabolic rate law is generally found. Fe-Cr alloys have good resistance but lose their protective oxide film by spalling above 1000° C. Alloys with the rare earth metals have both good resistance and film retention. 14 ref. (R1h; Fe-b, Cr, Y)

579-R. Kinetics of the Oxidation of Platinum. George C. Fryburg and Helen M. Petrus. Electrochemical Society, Journal, v. 108, June 1961, p. 496-503.

Electrically heated Pt ribbons are oxidized from 900-1500° C. and at pressures from 15 microns to 1 atm. Oxidation rate is affected by temperature, pressure, and orientation of surface crystals. Energy of activation is calculated at 42.5 kcal. per mole. 23 ref. (R1h; Pt)

580-R. The Oxide Films Formed on Copper Single Crystal Surfaces in Water. Pt. 2. Rate of Growth at Room Temperature.

Jerome Kruger. Electrochemical Society, Journal, v. 108, June 1961, p. 503-509.

Cu single crystals are immersed in water in equilibrium with O_2 or O_2-He mixtures and oxidation rate is measured from increase in film thickness with time. Film thickness is measured by polarized light. O_2 concentration, crystal surface orientation and stirring affect the rate. 16 ref. (R1h; Cu, 14-61)

581-R. Anodic Polarization and Passivity of Ni and Ni-Cu Alloys in Sulfuric Acid. J. Osterwald and H. H. Uhlig. Electrochemical Society, Journal, v. 108, June 1961, p. 515-519.

Potentiostatic data for Ni from 25-40° C. and Ni-Cu alloys at 25° C. in deaerated IN H_2SO_4. Data for critical current density for passivity and minimum current density to maintain passivity. 23 ref. (R10c; Cu-b, Ni-b)

582-R. Inhibiting Corrosive Wear in Lubrication With Halogenated Gases at 1500° F. by Use of Competitive Reactions and Other Methods. Donald H. Buckley and Robert L. Johnson. ASLE (American Society of Lubrication Engineers) Transactions, v. 4, Apr. 1961, p. 33-38.

Various gases are tested as corrosion inhibitors for Ni and Co-base alloys in halogen-containing gas lubrication systems. Experiments with $CF2Cl2$ and various mixtures of gas with inhibitors indicate that oxygen (air) is a satisfactory inhibitor reacting at the metal surface in competition with the chlorine of CF_2Cl_2. A CF_2Cl_2-air mixture lubricating Al_2O_3 sliding on cobalt base alloy shows low wear and low friction from 75-1500° F. (R7e, R10b; Co-b, Ni-b, EG-k, 14-68)

583-R. Mechanism of the Oxidation of Iron Films at Temperatures From -195° C. to 120° C. M. Wyn Roberts. Faraday Society, Transactions, v. 57, Jan. 1961, p. 99-109.

Activation energy as a function of temperature, pressure and oxide layer thickness. Surface diffusion and chemisorption of molecularly adsorbed oxygen. 32 ref. (R1h, P13a, 2-61, 3-74; Fe)

584-R. Use of Ductile Iron in the Pulp and Paper Industry. E. G. Holmberg. Tappi (Technical Assoc. of the Pulp and Paper Industry), v. 44, May 1961, p. 217A-222A.

Effect of structure and the electrochemical reactions in the corrosion of gray cast iron, ductile iron and mild steel. Corrosion data are given comparing the resistance of these materials to various paper mill environments. Other topics include mechanical properties, machinability, weldability, wear and heat resistance and foundry practice. 6 ref. (R-general, T29r; CI, CN, 17-57)

585-R. (Translation-ConBur.) The Passivating Properties of Chromate Pigments. I. L. Rozenfel'd, F. I. Rubinshtein and V. V. Zhebrovskii. Journal of Applied Chemistry of the USSR, v. 33, June 1960, p. 1280-1286.

Data on the electrochemical behavior of Al and Mg in the presence of Zn, Sr, Ba and K chromate pigments. Influence of pigments on the kinetics of electrode reactions determining the corrosion process. (R10c; Al, Mg)

586-R. (Translation-ConBur.) Effects of Corrosion Inhibitors on Corrosion Embrittlement of 1Kh18N9 Steel in $MgCl_2$ Solution Boiling at 153°. S. A. Balezin and N. I. Podobaev. Journal of Applied Chemistry of the USSR, v. 33, June 1960, p. 1287-1296.

Efficiency of PB-5, PB-8, BA-12 and K-I as stress corrosion cracking inhibitors. Mechanisms of their inhibiting action. 7 ref. (R10b; ST)

587-R. (Translation-ConBur.) Influence of Certain Inhibitors and Inhibited Lubricants on the Resistance of Brass to Stress Corrosion Cracking. N. I. Podobaev, S. A. Balezin and V. V. Romanov. Journal of Applied Chemistry of the USSR, v. 33, June 1960, p. 1297-1299.

Efficiency of petrolatum, lanolin, paraffin, ceresin, sodium benzoate, dibutyl phthalate and succinic acid as stress corrosion cracking inhibitors for brass exposed to NH_3 vapor. (R10b; Cu-n)

588-R. (Translation-ConBur.) Joint Action of Inhibitors on Corrosion of Iron in Acids. I. P. Anoshchenko. Journal of Applied Chemistry of the USSR, v. 33, June 1960, p. 1305-1309.

A more pronounced inhibiting effect on the corrosion of Fe in HCl and H_2SO_4 is achieved with a mixture of urotropine, acridine, KBr and $SnCl_2$ or $Al_2(SO_4)3$ than with the individual components. 15 ref. (R10b; Fe)

589-R. (Translation-ConBur.) Influence of Anodic Polarization on Intergranular Corrosion of Stainless Chromium-Nickel

Steels. N. D. Tomashov, G. P. Chernova and O. N. Markova. Journal of Applied Chemistry of the USSR, v. 33, June 1960, p. 1310-1317.

Annealed and quenched 2Kh18N9 steels are tested for resistance to intergranular corrosion as influenced by anodic polarization in H_2SO_4 solution. 10 ref. (R2h; SS)

590-R. (Translation-ConBur.) Corrosion of Steels Under Atmospheric Conditions. A. A. Babakov and D. G. Tufanov. Journal of Applied Chemistry of the USSR, v. 33, June 1960, p. 1318-1323.

Influence of C, Cr, Ni and other alloying elements on the atmospheric corrosion rate of various carbon, low-alloy, Cr and Cr-Ni stainless steels. (R3, 2-60; AY, CN, SS)

591-R. (Translation-ConBur.) Cathodic Polarization of Lead and Structure of Lead Deposits. O. A. Khan. Journal of Applied Chemistry of the USSR, v. 33, June 1960, p. 1330-1336.

Influence of temperature, Pb^{++} and HNO_3 concentration and various additives on the cathodic polarization of Pb in $PbNO_3$ electrolyte. The effect of glue, resorcinol, alpha-naphthol, beta-naphthol and alpha-nitroso-beta-naphthol in promoting satisfactory structure of the cathodic deposit. 19 ref. (R10c, R10d; Pb)

592-R. (Translation-ConBur.) Corrosion of Cadmium-Antimony Alloys in Hydrochloric and Nitric Acids. I. M. Bokhovkin. Journal of Applied Chemistry of the USSR, v. 33, June 1960, p. 1403-1405.

Influence of composition and Furfural additions on the corrosion rate of Cd-Sb alloys. Mechanism of formation at a 1:1 ratio of a protective surface barrier composed of Cd-Sb. (R6g; Cd-b, Sb-b)

593-R. (Translation-ConBur.) Corrosion of Iron in Acids in the Presence of Oxidizing and Inhibiting Agents. I. P. Anoshchenko. Journal of Applied Chemistry of the USSR, v. 33, June 1960, p. 1406-1407.

Influence of ferric ions on the corrosion rate and polarization of Fe in HCl and HNO_3 with a mixture of KBr, urotropine, acridine and $SnCl_2$ or $FeSO_4$ as inhibitor. 5 ref. (R10b, R6g; Fe)

594-R. (German.) Chemical-Physical Measurements With Pickling Inhibitors. C. Kalauch. Elektrie, v. 15, Mar. 1961, p. 90-92.

Effect of inhibitors on steel erosion during pickling is investigated in tests at 40° C. on steel sheet in HCl and H_2SO_4 by measuring weight loss and hydrogen gas development and by potential measurements on steel electrodes. 4 ref. (R6, L12g; ST)

595-R. The Structure of Surface Oxide Films on Molten Alloys. Kichizo Niwa, Goro Shimaoka and Iwao Yamai. Paper from "Physical Chemistry of Process Metallurgy". Pt. 1. v. 7. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1959, p. 293-322.

Electron diffraction studies are used to determine structures of films formed on Sn, Pb, Bi and Cd and Zn and alloys such as Pb-Sn, Pb-Zn, Pb-Cd, Pb-Sb, Pb-Bi, Cd-Zn and Sn-Cd. Structure, orientation and mechanisms of selective oxidation. 29 ref. (R1h, M22g; Bi, Cd-b, Pb-b, Sn-b, Zn-b, 14-60)

596-R. Rates of Solution of Rotating Zinc Cylinders in Liquid Bismuth. J. K. Jackson and R. E. Grace. Paper from "Physical Chemistry of Process Metallurgy". Pt. 1. v. 7. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1959, p. 633-644.

Effects of temperature and speed of rotation from 300-400° C. and rotational speeds of 80-400 rpm. on the rate of solution of Zn cylinders in liquid Bi. A modified Nernst-Brunner equation is used to define the solution rate constants. 19 ref. (R6q; Zn)

597-R. (Japanese.) Corrosion of Stainless Steel in High-Temperature Water. Tatsuo Mackawa, Michio Mizuta and Katsumi Ishihara. Japan Institute of Metals, Journal, v. 25, Mar. 1961, p. 195-197.

The corrosion of 304 and 304 L stainless steel in high-purity water at 300° C., 85 kg. per $cm.^2$ pressure is investigated as a function of chemical composition, heat treatment surface preparation for abraded and pickled specimens after solutioning and sensitizing heat treatments from 675-1050° C. The results are compared with corrosion in boiling 40% and 65% nitric acid. 9 ref. (R4, 2-62, 2-64; SS-e)

598-R. (Russian.) Corrosion of Fe-C Alloys in Acids. N. D. Tomashov and P. V. Strekalov. Chernaya Metallurgiya, Nov. 1960, p. 143-148.

Influence of the carbon content in carbon steel on corrosion rate in various concentrations of nitric, sulphuric and hydrochloric acids. Determination of the critical range of carbon concentration after which the corrosion reaction is inhibited. 4 ref. (R6g, 2-60; CN)

599-R. (French.) Duplex Nickel Plating. A. Dias Santilhano. Revue du Nickel, no. 2, Mar-Apr. 1961, p. 27-38.

Parts protected by various Ni plating processes are corrosion tested by the Corrodkote or Cass methods to study the protective power of one or two bright Ni platings with or without sulphur. 24 ref. (R11; Ni, 8-62)

600-R. (French.) High Temperature Corrosion by H_2S and Sulphur. Ph. Marchessaux. Corrosion et Anticorrosion, v. 9, May 1961, p. 160-168.

Corrosion of a reactor manufactured from Schneider AM 8/9 S steel, where sulphur is prepared by the combustion of H_2S in pure oxygen at approximately 1200° C. as a function of wall temperature. Protective power of BMA concrete used as a refractory. (R6q, T29; ST, 17-57)

601-R. Factors in Deterioration of Metals by Acid Slurries. F. L. Laque. Canadian Mining and Metallurgical Bulletin, v. 54, May 1961, p. 361-366.

Corrosion of equipment made of steel, Fe, Pb, Monel, Ni-Cu alloys, stainless steels and Ti in H_2SO_4 from 20-500° F. is determined as a function of acid concentration, air velocity and temperature. (R6g; Cu-b, Fe, Ni-b, Pb, ST, Ti)

602-R. Corrosion Experiences in the Acid Leaching of Cobalt-Nickel Sulphides. R. B. McIntosh and S. Romanchuk. Canadian Mining and Metallurgical Bulletin, v. 54, May 1961, p. 383-388.

Evaluation of corrosion test results for various stainless steels (304, 316, 317, 347), Nionel, Ti and other acid resistant materials used in part of the process involving H_2S04 leaching of Ni-Co sulphide slurry under air pressure. (R6g, T29; Ni-b, SS, Ti)

603-R. Materials of Construction for Slurries Containing Dilute Hydrofluoric Acid. H. G. Burbidge. Canadian Mining and Metallurgical Bulletin, v. 54, May 1961, p. 392-394.

Corrosion rates are determined for Fe-Cu-Ni alloy, Cu, red brass, polyvinyl chloride and other materials used in pot gas scrubbers from 180-200° F. Scrubbers are used in the removal of gases (HF and SO_2) formed in the electrolytic reduction of Al_2O_3 to metallic Al from molten cryolite. (R6g, T29; Cr-b, Cu-b, Fe-b, Ni-b, 17-57)

604-R. Corrosion Survey of Steel Sheet Piling. Naval Civil Engineering Laboratory. U. S. Office of Technical Services, PB 171501, Dec. 1960, 59 p. $1.75.

Corrosion occurring on sheet piling at eight naval harbors. The maximum rate of corrosion occurs in the splash zone about 2 ft. above mean low water and a secondary high corrosion rate of slightly less magnitude occurs in the anodic area about 2 ft. below mean low water. (R4b; ST, 4-53)

605-R. (Pamphlet-Translation.) The Resistance of Gas Turbine Metals to Vanadium Corrosion. R. A. Lipshtein, S. E. Khaikina and E. S. Ginzburg. Aug. 1960. 8 p. INFOSERV, 967 Farmington Ave., West Hartford 7, Conn. $12.

Vanadium corrosion of various steel alloys containing Cr, Ni and Fe and a Nimonic alloy is investigated as a function of temperature composition. Alloy with the highest Ni percentage showed greatest corrosion resistance while alloy containing Mo showed the least. Pt, porcelain and quartz were also subject to vanadium corrosion at high temperatures. 8 ref. (R6, 2-60, 2-61, W11m; Ni-b, ST)

606-R. The Influence of the Physical Metallurgy and Mechanical Processing of the Basis Metal on Electroplating. Pt. 7. The Effect of Chemical Treatment of a Steel Base on the Corrosion Performance of a Watts Nickel Deposit. M. H. Jones and J. Saiddington. Plating, v. 48, June 1961, p. 625-636.

Influence of ferrous base variables such as the nature and composition of steels, effect of mechanical polishing and influence of stretching due to forming or drawing on the corrosion performance of Ni deposits. Corrosion effects attributable to the base metal are concerned with the surface layer and can be reduced or eliminated by chemical treatments prior to plating. 8 ref. (R-general; ST, Ni, 8-62)

607-R. Evaluation of Structural Materials for Corrosion Resistance. R. J. Landrum. Materials Engineering Quarterly, v. 1, May 1961, p. 45-57.

Dynamic corrosion testing using various acids, stress corrosion testing, crevice corrosion testing and galvanic corrosion testing of No. 20 alloy steel, 316 stainless steel, 304 stainless steel, SAE 1020 steel, low-carbon steel, 70-30 brass, Hastelloy, 1100 Al alloy, Ti and gray cast iron. (R11; Al-b, AY, Cu-n, CI-n, Ni-b, SS, Ti)

608-R. Copper Oxide Film Formation at a Sliding Carbon-Copper Interface. W. J. Spry and P. M. Scherer. Wear, v. 4, Mar-Apr. 1961, p. 137-149.

Surface chemistry of a Cu_2O film is studied at a sliding C-Cu interface during passage of electric current. The effective temperature at which oxidation occurs is found to be the bulk temperature of the Cu. Various electrographitic bushes cause changes in the steady state thickness of the film. 18 ref. (R1h; Cu)

609-R. Oxidation-Resistant Coatings for Refractory Metals. C. A. Krier. Battelle Technical Review, v. 10, June 1961, p. 11-15.

Evaluation of metallic, intermetallic, ceramic and cermet coatings applied to W, Ta, Cb, Mo and other refractory metals to prevent oxidation at high temperatures. Comparison of melting point, crystal structure and other physical properties of the refractory metals. (R1h; EG-d37, 8)

610-R. Getting to Grips With Dry Corrosion. Engineering, v. 191, May 5, 1961, p. 646-647.

Report on causes and effects in industrial and nuclear reactor installations of "dry corrosion" or the destruction of metal by a chemical process without the presence of a liquid electrolyte. Research on new Ti, Zr, Hf and Cb alloys to determine their resistance to such corrosion. (R6, T11; Cb-b, Hf-b, Ti-b, Zr-b)

611-R. Some Comments on the Tarnishing of Silver Contacts. H. L. Halstrom. Teleteknik, v. 4, Feb. 1960, p. 29-39.

Determination of tendency of Ag alloys to tarnish when used as relay contact material. Results indicate Ag-Si and Ag-Cu alloys, when properly surface treated, have high resistance to sulphur-induced corrosion. (R1h, T1n; Ag-b, Cu, Si, 17-57)

612-R. Inspection Discloses Severe Corrosion and Scale Deposits in Cast Iron Steam Boiler. Condenser, v. 14, June 1961, p. 11.

Report on inspection of cast iron sectional steam boiler discloses leakage of steel pipe nipples resulting from severe corrosion. Analysis of corrosion deposits. (R4c, T26q; CI)

613-R. Review of Some Data on Corrosion of Stainless Steel and Higher Alloys in Pulp Mill Equipment. Harold C. Templeton. Corrosion, v. 17, June 1961, p. 9-13.

Allowable corrosion rates for equipment with low-corrosion tolerance are discussed with review corrosion case histories in sulphite, alkaline, kraft and groundwood pulping processes. Survey of application of materials including use of stainless 316 for heater and liquor piping, use of Hastelloy C for the highly corrosive chlorine and hypochlorite bleaching solutions and use of Ti in some cases when chlorine dioxide solutions are present. 7 ref. (R-general, T29r; SS, SGA-g, 17-57)

614-R. Corrosion of Stainless Steel Pulp Digesters. W. M. Scott. Corrosion, v. 17, June 1961, p. 14-16, 18.

Insoluble calcium sulphate scale deposited in a spot welded stainless steel or Hastelloy F digester lining is suggested as the cause of pitting from a concentration cell effect, stress corrosion cracking and intergranular precipitation and cracking. Theories are outlined for the corrosion damage observed in the digester, with description of repair procedure. 6 ref. (R1, R2h, L24, T29n; SS, Ni-b, 17-57)

615-R. Corrosion Resistance of Stainless Steel Overlays in Kraft Digesters. C. L. Carns. Corrosion, v. 17, June 1961, p. 20-24.

Failure in weld overlays of 310 stainless steel deposited by automatic arc welding in repairing complete digester shells of firebox plate. Failure of the weld deposit is attributed to dilution of the stainless steel by the base metal and to nonuniformity of deposit resulting in corrosion cells causing pitting. (R2j, L24, T29r; SS)

616-R. Cathodic Protection Proposed for Vapor Area in Pulp Digesters. L. C. Wasson. Corrosion, v. 17, June 1961, p. 26-28.

A proposed system of cathodic protection for pulp digester tanks in areas covered by both liquor and vapors. An inner lining of steel sheet serves as an anode, separated from the tank wall by a porous filler layer of Portland cement and plaster of paris that permits electrical conductance paths of moisture vapor through the filler. (R10d, T29n; ST, NM, 17-57)

617-R. Effect of Sunlight on the Corrosion of Steel. Leonard C. Rowe. Corrosion, v. 17, June 1961, p. 267t-268t.

Investigation of the surface activation of steel covered by a thin film of water by ultraviolet rays in sunlight. Effect of surface activation and of the water level on the corrosion rate of steel. (R2b; ST)

618-R. Corrosion of Carbon and Low-Alloy Steels in Out-of-Pile Boiling-Water-Reactor Environment. D. C. Vreeland, G. G. Gaul and W. L. Pearl. Corrosion, v. 17, June 1961, p. 269t-276t.

Extensive corrosion testing of structural carbon steels, high-strength low-alloy steels, alloy and stainless steels in a dynamic test loop simulating the various environments found in a nuclear boiling-water-reactor system. Effect of pH, oxygen and hydrogen content and metal composition on the total corrosion, corrosion rate and iron-to-system rate. 18 ref. (R4c, T11, 2-62; ST, 17-57)

619-R. Corrosion Characteristics of Iron-Aluminum and Iron-Chromium-Aluminum Alloys in High Temperature Petroleum Applications. R. B. Setterlund and G. R. Prescott. Corrosion, v. 17, June 1961, p. 277t-282t.

Review of the basic metallurgy of the Fe-Al system and of the status of alloy development programs. Data are given for elevated temperature, mechanical properties, oxidation resistance, corrosion by oil ash containing Na_2SO_4 and V_2O_5 and resistance to sulphidization at high temperatures by H_2S formed during the desulphurization of petroleum oils. 19 ref. (R-general, R7a, M24b, T29n, 2-62; Fe-b, Al-b)

620-R. Acid Corrosion Inhibition With Secondary Acetylenic Alcohols. John G. Funkhouser. Corrosion, v. 17, June 1961, p. 283t-287t.

Evaluation of secondary acetylenic alcohols functioning as corrosion inhibitors in aqueous mineral acids. Factors affecting corrosion and corrosion control including type and concentration of corrosive medium and inhibitors, type of metal to be protected, temperature, amount of oxygen and impurities present and testing methods. 8 ref. (R10b)

621-R. Unity of Anaerobic and Aerobic Iron Corrosion Process in the Soil. C. A. H. von Wolzogen Kuhr. Corrosion, v. 17, June 1961, p. 293t-299t.

Review of soil corrosion mechanisms on Fe including electrochemical, sulphate, nitrate and carbonic acid reduction, effects of chemical substances, and, in particular, aerobic and anaerobic corrosion processes. The hydrogen acceptor, as invariably present in all forms of Fe corrosion considered, is proposed as the unity in the aerobic and anaerobic processes. 29 ref. (R8, R1g, 10-54; Fe)

622-R. Devices Used in Corrosion Control of Power Cables. J. J. Pokorny. Corrosion, v. 17, June 1961, p. 300t-304t.

Description of improvements in electrical devices such as silicon diode electrolysis switches, the test current interrupters, cathodic protection and forced drainage rectifiers used in the corrosion control of underground power cables. A method is outlined for grounding and corrosion protection of a steel pipe cable system. (R10d, T1b, 1-52; ST, 17-57)

623-R. Corrosion of Superalloys at High Temperatures in the Presence of Contaminating Salts. A. Moskowitz and L. Redmerski. Corrosion, v. 17, June 1961, p. 350t-312t.

Corrosion of Inconel X, Inconel 702 Haynes 25, Rene 41 and M-252 Ni alloy sheets by potassium chloride and lithium fluoride from 1600-1900° F. Severe surface attack, intergranular penetration and internal void formation accelerate the failures of thin sheet specimens during creep-rupture testing. X-ray diffraction examinations show a difference between normal oxidation products and oxide corrosion products, indicating that the presence of the salt prevents the normal formation of a protective oxide film. 9 ref. (R-general, R1d, R6, Q3, 2-62; Ni-b, SGA-h, SGA-g, 4-53)

624-R. Atmospheric Corrosion Testing of Metals in Canada. E. V. Gibbons. Corrosion, v. 17, June 1961, p. 318t-320t.

Evaluation of corrosion resistance of Al and Mg alloys, Cu, Zn, Muntz metal, and low-carbon stainless and alloy steels exposed to rural, marine-industrial, industrial, marine, far northern and semi-industrial atmospheres. 6 ref. (R3; ST, Al-b, Cu-b, Mg-b, Zn-b)

625-R. Aluminium Sprayed Steel in Marine Conditions. F. C. Porter. Engineer, v. 211, June 2, 1961, p. 906-907.

Comparison of Al coatings on steel with Zn coatings as to corrosion resistance in sea water and sulphur polluted industrial atmospheres. 22 ref. (R4b; ST, Al, 8)

626-R. (Polish.) Oxidation of Liquid Bi-Sn and Bi-Mg Alloys. S. Balicki. Archiwum Hutnictwa, v. 6, Jan. 1961, p. 9-21.

Determination of the oxidation rates of liquid Bi-Sn and Bi-Mg alloys at 500° C. Variation in the two rates is considered as a function of the compactness of the respective surface oxides, rather than of the free energy of oxide formation or of the value of the ionic radii of alloying elements. Comparison with oxidation of Bi-Al alloys. 16 ref. (R1h, 2-62; Bi-b, Sn, Mg, Al, 14-60)

627-R. (Polish.) Mechanism of Metal Oxidation at High Temperatures. S. Mrowel. Archiwum Hutnictwa, v. 6, Jan. 1961, p. 61-82.

Investigation of the oxidation mechanism of Cu and Ag and the diffusion mechanism of individual reagents using a double layer scale from 444-842° C. Sulphurization of Cu and Ag using radioactive isotope of S^{35}. 56 ref. (R1h, Cu, Ag)

628-R. (Spanish.) Rubbing Corrosion. Enrique J. Garcia Sardinero. Tecnica Metalurgica, v. 17, Jan-Feb. 1961, p. 1-16.

Rubbing corrosion and seizing observed with the metal pairs Cu/Cu and Cu/steel in air, CO_2 and humid air. Effects of friction coefficient, mechanical load, amplitude, frequency and number of cycles, temperature, surface elasticity, hardness, liquid, half-liquid and solid lubricants. 45 ref. (R1f; Cu, ST)

629-R. Failure of a Thick-Walled Pressure Vessel. Edward Saibel. I/EC (Industrial and Engineering Chemistry), v. 53, July 1961, p. 56A-57A.

Study of mechanical properties of 4340 alloy steel pressure vessels which failed because of stress corrosion after operation at 20° C. and maximum wall stress of 58,500 psi. (R1d, Q-general, T26q; AY)

630-R. Stainless Steels and Other Ferrous Alloys. W. A. Luce and J. H. Peacock. I/EC (Industrial and Engineering Chemistry), v. 53, July 1961, p. 586-589.

Stress and intergranular corrosion of ferrous alloys and AISI 200, 202, 301, 304, 310, 314, 316, 319 L and 347 stainless steels. Effect of high temperature (100-2600° F.) on mechanical properties. Welding, manufacturing, metalworking and surface treatments. 66 ref. (R1d, R2h, Q-general, 2-62; SS)

631-R. Stress-Corrosion Cracking Susceptibility of Zirconium in Ferric Chloride Solution. J. T. Dunham and H. Kato. U. S. Bureau of Mines, Report of Investigations 5784, 1961, 29 p.

Determination of cracking susceptibility of Zr in $FeCl_3$ solution with applied tensile stress from 12,000-35,000 psi. at room temperature. Effect of stress, solution concentration and aeration of the solution. 18 ref. (R11s, R1d, 2-66, 3-66; Zr)

632-R. Corrosion of Stainless Steels. K. L. Sanborn. Digest of "Comparative Data on the Corrosion Resistance of Selected Types of 18-8 Chromium-Nickel Stainless Steels". U. S. Atomic Energy Commission Report no. HW-32727. Metal Progress, v. 80, July 1961, p. 140, 142.

347, 347 CbTa, 304 L and 321 stainless steels are subjected to Huey tests, Strauss tests and HNO_3-HF tests to determine comparative data on corrosion resistance. (R11; SS)

633-R. Penetration of Liquid Bismuth Into the Grain Boundaries of a Nickel Alloy. R. F. Cheney, F. G. Hochgraf and C. W. Spencer. Metallurgical Society of AIME, Transactions, v. 221, June 1961, p. 492-498.

Columnar grained specimens of Ni, containing 0.25% Si and 0.22% Mn, are exposed to liquid Bi from 670-105° C. Under isothermal conditions the liquid penetration rate is constant, the activation energy for the process is 22,000 cal. per g-atom and increases with small amounts of plastic deformation. The reaction is attributed to

either transfer of Ni across the liquid-solid interface or diffusion in the grain boundary ahead of the liquid film. 13 ref. (R2h, R6m, N-general, Ni-b, Bi)

634-R. (German.) Mechanical Properties at Elevated Temperatures of Sintered Iron-Aluminum-Molybdenum Alloys. Friedrich Benesovsky. Stahl und Eisen, v. 81, May 25, 1961, p. 712-719.

Investigation of oxidation resistance by annealing from 800-1100° C. in air, measurement of mechanical properties including stress-rupture strength at 500° C. and creep and microstructure examination of sintered and unsintered and subsequently extruded Fe-Al-Mo (10-20% Al, 5% Mo) specimens containing 1-30% TiC/Cr_3C_2 and 2.5% Al_2O_3. (R1h, Q-general, M27; Fe-b, Al, Mo)

635-R. Monel, Inconel Alloys Resist Corrosion by Fluorine Compounds. Inco Nickel Topics, v. 14, Apr. 1960, p. 9.

Ni-Cr and Ni-Cu alloys resist corrosion by hydrofluoric acid, fluorine, UO_2 UF_4 and UF_6 at very high temperatures (1100° F.) during fluorination of uranium oxide ores to produce UF_6. (R6, 2-62; Ni-b, Cr, Cu)

636-R. (English.) Anodic Dissolution of Iron. K. A. Christiansen, H. Hoeg, Kirsten Michelsen, G. Bech Nielsen and H. Nord. Acta Chemica Scandinavica, v. 15, Feb. 1961, p. 300-320.

Kinetics of the anodic dissolution of Fe as governed by a pH dependent and potential dependent dissociation mechanism of chemisorbed water. A system of differential equations for the mechanism is derived and solved for steady state conditions. 17 ref. (R2g, R10c; Fe)

637-R. Zinc Dust Points-- Chemical or Electrochemical Protection? R. H. Chandler. Corrosion Technology, v. 8, June 1961, p. 165-167.

Research into the mechanism of protective action of Zn dust coatings on steel panels. Evidence for the chemical and electrochemical protection theories. 17 ref. (R10, L23; Zn, ST)

638-R. Effects of Fouling and Its Economic Importance. Pt. 1. A. Partington. Corrosion Technology, v. 8, June 1961, p. 176-179.

Association of fouling with corrosion on ship plates due to the action of anti-fouling compositions. Effects of fouling on harbor installations and on the erosion/corrosion of condenser tubes in power stations. (R4b, 2-60; T22)

639-R. Protection for the Forth Road Bridge. Corrosion Technology, v. 8, June 1961, p. 173-175.

Techniques for the corrosion protection of the steelwork and cables of a suspension bridge having a main span of 3300 ft. Cables are protected by coating with a paste and wrapping with a bituminous tape for an expected service life of 100 yr. (R10, T26p)

640-R. Inhibition of Corrosion of Commercial Aluminum in Hydrochloric Acid Solutions. J. Sundararajan. Journal of Scientific and Industrial Research, 20D, Apr. 1961, p. 137-141.

Influence of different inhibitors on corrosion rate. Evaluation of acridine, thiourea, nicotinic acid and dextrin. Polarization studies with thiourea. 27 ref. (R6g, R10b; Al)

641-R. Cavitation Erosion on Screw Propellers. Nils Christian Astrup. Acta Polytechnica Scandinavica (Mechanical Engineering Series no. 7), ME 7, 1960, 16 p.

Hydrodynamics of cavitation, types which give rise to erosion, means of avoding or reducing cavitation damage. 4 ref. (R2m, T22h)

642-R. Protecting Structural Steel Against Corrosion. Pt. 2. Australian Civil Engineering and Construction, v. 2, May 3, 1961, p. 49-52.

Protection of steel structures against air, soil and water corrosion by coating with pitch, bitumens, vitreous enamel and concrete, wrapping with tape, spraying with Zn and Al, painting and galvanizing. Use of chemical inhibitors in water to reduce its corrosiveness by making it softer. 8 ref. (R10, T26; ST, 17-57)

643-R. Eliminating Soldering Flux Corrosion From Stainless Steel Products. Metal Products Manufacturing, v. 18, July 1961, p. 36-37.

Prevention of corrosion by using hot water to wash away soldering fluxes containing hydrochloric acid and zinc chloride. (R10, R6g; SS, 7-52)

644-R. Hot Water Cylinders and Immersion Heaters. Corrosion Prevention and Control, v. 8, June 1961, p. i-v.

Problems of stress and galvanic corrosion in Cu and steel liners of water heating devices. Methods of corrosion prevention and control with emphasis on cathodic protection. (R1, R4, R10d; Cu, ST)

645-R. Corrosion Inhibitors in Pickling Baths. Corrosion Prevention and Control, v. 8, June 1961, p. v-vi.

Acid corrosion tests on cleaned steel sheet specimens to determine whether pickling acid containing inhibitor at various concentrations attacked the samples. Loss of weight is determined for 30-120 min. exposure time. (R6g, R10b, L12g; ST)

646-R. Gases in Steel (Vapor Transport in the Oxidation of Iron-Chromium Alloys). C. T. Fujii and R. A. Meussner. Report of NRL (Naval Research Laboratory) Progress, June 1961, p. 23-25. (Available as PB 1713109 from U. S. Office of Technical Services, Washington 25, D. C.) $1.25.

Specimens of pure Fe and Fe-Cr alloys (10-20% Cr) are heated with wustite from 950-1100° C. to determine whether wustite in the outer scale supplies the oxygen necessary to generate inner scale and subscale formation. Weight gain measurements and photomicrographic measurements are used to determine oxide scale composition (wustite and spinel) and the extent of the transport mechanism in the reaction. (R1h, 9-52; Fe-b, Cr)

647-R. Continuous Corrosion Monitoring. E. S. Troscinski, A. S. Couper and Andrew Dravnieks. Mechanical Engineering, v. 83, July 1961, p. 47-51.

Electrical resistance measurements at temperatures up to 1000° F. and pressures up to 1000 psi. on a probe of proposed structural material (such as 304 and 316 stainless steels, carbon steel and Hastelloy C) predict corrosion behavior as influenced by alloy tested, inhibitors, process under study, time and temperature. 9 ref. (R11a, P15g, 2-61, 3-74; SS, CN, Ni-b)

648-R. Stress Corrosion Cracking. Warren E. Berry. Light Metal Age, v. 19, June 1961, p. 6-10.

Effect of alloy composition, stress, corrosive environment, temperature and time on cracking of Al, Cu, Mg, Au, Ni and Ti alloys, stainless and low-alloy steels, methyl methacrylate and polyvinyl chloride plastics and glass. Pitting, galvanic corrosion, intergranular corrosion, cavitation, fretting and corrosion fatigue. (R1d, R-general, 2-60, 2-61; Al-b, Cu-b, Mg-b, Au-b, Ni-b, SS, AY)

649-R. Pitting Corrosion of Stainless Steel. D. L. Graver. Steel Horizons, v. 23, 1961, 4 p. (Bound In).

Parameters of this type of corrosion, indicating its relationship to the corroding environment and to the length of time of exposure. Comparison of Mo-bearing stainless steels (type 316, 317) with 18-8 types such as 304 stainless for resistance to pitting attack by halide and other ions. (R2j, R7h; SS, Mo)

650-R. Cladding and Structural Materials. Reactor Core Materials, v. 4, May 1961, p. 32-50.

Review of literature on corrosion of Zr, Al and Fe-Ni-Co alloys; carburization of stainless steels; oxidation of Cb and Ta; coating of Mo and radiation effects on Ag, Au, Fe, Cu, Ni, Pd, Al, Pt, Sn, Mo, W, alkali halides, UO_2, ZrO_2, Al_2O_3, SiO_2, TiO_2 and steels. Mechanical properties of Zr alloys, steels, Hastelloy X and Zircaloy. 89 ref. (R-general, J28g, R1h, L-general, Q-general; SGB-s, 2-67)

651-R. (Russian.) Influence of Urotropine on Corrosion of Steel in Acid. A. S. Afanasiev, A. P. Brinza and L. I. Herasiutina. Ukrainskii Khimicheskii Zhurnal, v. 26, June 1960, p. 723-729.

Corrosion of MST-2 steel in H_2SO_4 of various concentrations and in the presence of urotropine. Determination of the inhibitory, neutralizing or stimulating effect of urotropine by the polarization method. 5 ref. (R6g, 2-66; AY)

652-R. Galvanic Corrosion of Couples of Metals in Acids in Absence and Presence of Inhibitors. W. Machu and M. G. Fouad. Journal of Chemistry of the U. A. R., v. 3, Feb. 1960, p. 189-195.

Weight losses and inhibition effects during galvanic corrosion of brass

and cast iron in various acids and mixtures of acids in absence and presence of inorganic and organic inhibitors and their mixtures. (R1a, R6, R10b; Cu-n, CI)

653-R. (Translation-Brutcher no. 5007.) Improving the Corrosion Fatigue Strength of Pump Rods (by Surface Hardening). R. M. Raskin and R. A. Bagramov. Metallovedenie i Termicheskaya Obrabotka Metallov, Dec. 1959, p. 35-38.

Previously abstracted from original. See item 78-R, 1960. (R1e, T28, J28; CN-p)

654-R. (Translation-Brutcher no. 5012.) Oxidation of Steel and Cast Iron at High Temperatures. E. M. Blank. Metallovedenie i Termicheskaya Obrabotka Metallov, Dec. 1959, p. 53-54.

Previously abstracted from original. See item 79-R, 1960. (R1h, 2-62; ST, CI)

655-R. Problems of Predicting Cavitation Erosion From Accelerated Tests. J. M. Hobbs. American Society of Mechanical Engineers, Paper no. 61-HYD-19, 1961, 8 p. $1.

Experimental techniques for measurement of relative rates of erosion in full-scale hydraulic turbomachines under varying conditions. Possible use of models in accelerated laboratory tests. 15 ref. (R2m, R11r, W11n)

656-R. Exothermic Columbium Reaction for Direct Addition to Metals. Harry W. Highriter. Fansteel Metallurgy, June 1961, p. 2-3.

Cb additions to stainless steel prevent intergranular corrosion by immobilizing chromium carbide. Effect on yield and tensile strength of low-carbon steels and on weldability of CuNi-base alloys. Methods of adding Cb to stainless steel melts. (R2h, Q23b, Q27a, K9s, 2-60; SS, CN, Ni-b, Cu, Cb)

657-R. Column Woes Vanish With Titanium Trays. Chemical Processing, v. 24, July 1961, p. 92.

Application of commercially pure 16-gage sheet Ti in sieve-type trays and linings for a crude organic chemical reactor column to resist corrosive environment. (R7j, T29; Ti, 4-53, 17-57)

658-R. Argon-Arc Welded Heat- and Corrosion-Resistant Tubing. P. L. Cotton and Kingsley Davis. Australian Institute of Metals, Journal, v. 6, May 1961, p. 115-123.

Characteristics of welded austenitic stainless steel tubing. Mechanism of intercrystalline corrosion and effect of microstructure, sigma phase precipitation and duplex structures on corrosion resistance. Use of cold work and heat treatment to eliminate metallurgical evidence of the existence of the weld. 7 ref. (R2h, R-general, 3-71; SS, 4-60, 7-51)

659-R. (Translation-ConBur.) Influence of Oxidizing Agents on the Inhibiting Properties of Phosphates. A. Ya. Shatalov, I. K. Marshakov and T. A. Rubtsova. Journal of Applied Chemistry of the USSR, v. 33, May 1960, p. 1025-1029.

Determination of the corrosive behavior of steel-3 by measurement of equilibrium potential in an electrolyte containing 30 mg. NaCl and 70 mg. Na_2SO_4 per liter, representing lake and river water. Influence of $K_2Cr_2O_7$, aeration, O_2 and H_2 on the inhibiting effect of K_2HPO_4, K_3PO_4 and orthophosphate. 5 ref. (R10b, 2-60; ST)

660-R. (Translation-ConBur.) Influence of Metal Cations on Corrosion of Iron in Sulphuric Acid at Elevated Temperatures. I. P. Anoshchenko. Journal of Applied Chemistry of the USSR, v. 33, May 1960, p. 1136-1139.

A study of the influence of K, Ca, Na, Sr, Mg, Al, Zn, Cd, Co, Ni, Sn, Sb and Bi cations on the dissolution of Fe cylindrical specimens in 3N H_2SO_4 and 3N HCl from 20-80° C. Polarization curves are constructed. 11 ref. (R6g, 2-60, 2-61; Fe)

661-R. The Exfoliation Corrosion of Aluminium Alloys. E. A. G. Liddiard, J. A. Whittaker and H. K. Farmery. Institute of Metals, Journal, v. 89, June 1961, p. 377-384.

The layer or exfoliation type of attack occurring on extruded HE15 alloy is studied by a nondestructive method in which the changes with time in the deflection characteristics of specimens under four-point loading are used as a measure of the effective loss in thickness to determine the forms of the corrosion of time curves and the effect of aging time, metal spraying and stressing. 6 ref. (R2n, R1d, 2-64, 3-67, 3-68; Al-b, 4-58)

662-R. (German.) Stress Corrosion of Alpha Brass (as Influenced by Chemical Composition, Deformation and Annealing). Karkala Vasudeva Kamath. Freiberger Forschungshefte, no. B 56, 1961, p. 7-98. (plus 4 p. of illus.)

Stress corrosion testing of bent brass (6.1-35.2% Zn) strip specimens subjected to varying deformation and annealing treatments in 10% ammonia solution containing 5 g. per liter Cu in the form of $CuCO_3$. Influence of additions of Sn, Al, Cr and Si on stress corrosion. Microscopic investigation of corrosion mechanism and crack formation. (R1d, R11s, 2-60, 2-64, 3-68; Cu-n)

663-R. (German.) Standardization in the Field of Corrosion and Corrosion Protection. Herbert Puschmann. Metall-Reinigung + Vorbehandlung, v. 10, May 1961, p. 70-72.

Standardization of corrosion and corrosion protection of materials (metals, nonmetallic inorganic materials, nonmetallic organic materials and supplementary materials, for example, seals or gaskets) with emphasis on metals, is discussed from the viewpoint of physical, chemical and combined physical-chemical stress state of material and means of corrosion protection. (R-general)

664-R. (German.) Physical-Chemical Approach to Waste-Gas Corrosion Problems in Steam Boiler Plants. A. Bukowiecki. Schweizer Archiv, v. 27, May 1961, p. 180-193.

Chemical reactions and physical factors governing high-temperature (over 200° C.) corrosion in superheaters and on boiler walls, low-temperature (below 200° C.) corrosion in economizers and air heaters, both occurring during plant operation and corrosion during stoppage time, caused by reactive components of waste gas (CO_2, H_2O, SO_2 and SO_3). 49 ref. (R-general, R4c, 2-61, 2-66, T26q)

665-R. (German.) Control of Corrosion and Deposit Formation in Steam Boilers Fired by Sulphur-Rich Oils. E. Zehnder. Schweizer Archiv, v. 27, May 1961, p. 193-198.

Means for control of corrosion and deposit formation with emphasis on neutralization of SO_2, SO_3 and H_2SO_4 by an alkali medium, preferably MgO in the form of dolomite or magnesite, which is blown as dust into the furnace chamber. (R10a, T26q)

666-R. (German.) Problems in Corrosion, Deposit Formation and Air Pollution in the Operation of Oil-Fired Steam Boilers. J. Greenwood and G. R. Wade. Schweizer Archiv, v. 27, May 1961, p. 198-211.

Reaction mechanism of high-temperature corrosion (600-900° C.), formation of adherent deposits caused by Na, V and SO_3 contained in waste gas and low-temperature corrosion (150° C.) Survey of air pollution problems and pollution and corrosion control. 49 ref. (R-general, R4c, A8, T26q)

667-R. (German.) Control of Low-Temperature Corrosion in Oil-Fired Steam Boiler Plants by Constructive Means. Gottfried Peter. Schweizer Archiv, v. 27, May 1961, p. 211-217.

Control of corrosion by selection of carbon steel low in nonmetallic inclusions, application of resistant coatings for parts exposed to corrosion and by increase of feed water and air temperature. Block diagrams for plants with feed water preheater and waste heat utilization. (R4c, R10, T26q; CN)

668-R. Investigation of Oxidation Resistant Coatings on Graphite and Molybdenum in Two Arc-Powered Facilities. Roger W. Peters and Thomas A. Rasnick. NASA Technical Note D-838, July 1961, 29 p. (Available from National Aeronautics and Space Administration, Washington, D. C.). $.75.

ATJ graphite and 0.5% Ti-Mo alloy are tested in a 6 in. subsonic low-pressure arc-powered tunnel and a 1500-kw. subsonic arc jet to determine effectiveness of refractory coatings in preventing oxidation of these materials. Results indicate that the siliconized coating for the graphite and the W-2 and Durak MG coatings for the alloy provide adequate protection at temperatures up to 3000° F. (R1h, 2-61, 1-54; Mo-b, Ti, NM-k36, 8, EG-d37)

669-R. (German.) Investigation of Corrosion of Steels Containing 13% Chromium. Walter Peter and Edward G. Gondolf. Archiv fur das Eisenhuttenwesen, v. 32, May 1961, p. 337-343.

Corrosion testing by measurement of weight loss of heat treated steels (0.08-0.45% C, 12.3-15.2% Cr) in boiling

acetic, citric, oxalic and nitric acid of various concentration. Study of corrosion mechanisms and influence of heat treatment on corrosion resistance. (R6g, R7b, R-general, 2-64; SS)

670-R. The Corrosion of Decorative Nickel Plus Chromium Coatings--A Metallographic and Potential Study. G. N. Flint and S. H. Melbourne. Metal Finishing Journal, v. 7, June 1961, p. 218-221, 233.

Comparison of the morphology of pits in coatings resulting from service in an industrial atmosphere with that of pits produced by accelerated corrosion testing. (R2j, R3n, R11; Ni-b, Cr, 8-62)

671-R. (Translation-ConBur.) Effect of the Solution Composition on the Anodic Behavior of Low-Carbon Steel. V. V. Gerasimov and A. I. Gromova. Journal of Applied Chemistry of the USSR, v. 33, July 1960, p. 1547-1550.

Kinetics of electrode processes on 40 steel in 1 N solutions of sodium chloride, sulphate and sulphite. In the first two solutions the rate of the cathodic process is found to be controlled by the rate of oxygen diffusion to the metal surface while in sodium sulphite the rate is controlled by oxygen diffusion and the rate of discharge of hydrogen ions. Corrosion rates and equilibrium potentials are given. 5 ref. (R1j; CN-g)

672-R. (Translation-ConBur.) Mechanism of Gas Corrosion of Magnesium Alloys of the Mg-Al-Zn-Mn Type. I. A. Makolkin. Journal of Applied Chemistry of the USSR, v. 33, July 1960, p. 1556-1562.

Oxidation mechanisms of alloy specimens are determined from electron diffraction studies, spectral and chemical analysis and X-ray structural analysis of the oxide films. Composition of the films is given for temperature from 20° C. to above 400° C. 25 ref. (R1h, M-general; Mg-b)

673-R. (Translation-ConBur.) Corrosion of Iron in Fused Nitrates and Chlorides of Metals of Groups I and II of the Periodic System. V. P. Kochergin, E. P. Druzhinina, G. V. Men'shenina and E. P. Asanova. Journal of Applied Chemistry of the USSR, v. 33, July 1960, p. 1563-1568.

The corrosion resistance of Fe in $NaNO_3$-$MgCl_2$, $NaNO_3$-$ZnCl_2$, $NaNO_3$-LiCl, $NaNO_3$-KCl, $Ca(NO_3)_2$-NaCl, $Sr(NO_3)_2$-NaCl, $Ba(NO_3)_2$-NaCl and KNO_3-NaCl melts is measured at 500° C. and various melt compositions. 17 ref. (R6g, 2-60, 2-62; Fe-b)

674-R. (Translation-ConBur.) Study of the True Corrosiveness of Oils. N. M. Grad and Yu. T. Sudakov. Journal of Applied Chemistry of the USSR, v. 33, July 1960, p. 1569-1572.

Corrosiveness of machine oil containing various organic additives is determined on Pb, Cd and leaded bronze plates in air and oxygen atmospheres. Influence of the oil acid number and of anticorrosion additives is shown. (R7e, 2-60; Pb, Cd, Cu-s)

675-R. (Translation-ConBur.) Influence of Admixtures of Lead on the Corrosion Resistance of Electrolytic Zinc. I. E. Titova and T. Khamogonova. Journal of Applied Chemistry of the USSR, v. 33, July 1960, p. 1573-1575.

Study of the corrosion in acid and alkali media of Zn containing additions of 0.08-1.35% Pb by weight shows that the Pb influences the cathodic liberation of hydrogen and therefore retards corrosion most effectively in acids. 8 ref. (R6g, R6j, 2-60; Zn-b, Pb)

676-R. Climatic Effects on the Rusting of Painted Steel. J. R. Rischbieth and K. R. Bussell. Oil and Colour Chemists' Assoc., Journal, v. 44, June 1961, p. 351-366.

The efficiency of various primers in retarding the rusting of steel exposed to temperate marine semi-industrial and rural, and hot dry, tropical rural and equatorial oceanic climates. (R3, L26; ST, 8-70)

677-R. Properties of Materials at High Temperatures. Pt. 2. Industrial Heating, v. 28, July 1961, p. 1301-1302.

Test program for developing ceramic, ceramic-metal and metal coatings for stainless steels and refractory metals used in missiles and supersonic aircraft. Prevention of high temperature oxidation. Radiation properties of the coatings. (R1h, L-general, P17, T24; SS, EG-d37, 8)

678-R. Control Carbide Precipitation When You Weld Stainless Steel. G. E. Linnert and R. M. Larrimore, Jr. Welding Design & Fabrication, v. 34, July 1961, p. 35-36.

Evaluation of heat treatment, use of stabilized stainless steel, use of stainless with extra-low carbon and rapid weld cooling for avoiding intergranular corrosion caused by welding heat. (R2h, K9, N7, 2-60, 2-64; SS)

679-R. The Mechanism of Cavitation Damage by Nonhemispherical Cavities Collapsing in Contact With a Solid Boundary. Charl F. Naude and Albert T. Ellis. American Society of Mechanical Engineers, Paper no. 61-Hyd-8, 1961, 9 p.

A perfect fluid theory which neglects effect of gravity and which assumes that pressure inside a cavitation bubble remains constant during collapse is given for the case of a nonhemispherical but axially symmetric cavity. High speed motion pictures of cavities generated by spark methods are used to test theory experimentally. 9 ref. (R2m, 10-51)

680-R. A Study on Controlling High Temperature Oxidation of Vanadium Base Alloys. J. S. Klicker and H. B. Bomberger. Crucible Steel Company (Wright Air Development Division). U. S. Office of Technical Services, AD 258378, Jan. 1961, 88 p. $2.25.

Improved oxidation resistance of vanadium-base alloys is possible through alloying and/or oxide coating. Results indicate that vanadium oxide mixtures and, therefore, possibly vanadium alloys can be developed to form refractory oxides at operating temperatures as high as 1800-2100° F. (R1h, 2-60, 2-62; V-b, 14-68)

681-R. Protection of Steel Structures Against Corrosion. Acier-Stahl-Steel, v. 26, June 1961, p. 293-301.

Corrosion testing of 2 mm. thick A.B.E.M. IV type steel sheet specimens to determine inhibitory effect of eight paints in air, sea and river water and natural weather conditions. (R3, R4, R10b; ST, 4-53)

682-R. (Pamphlet.) Stainless Steel for Corrosion and Oxidation Resistance. F. P. A. Robinson. 9 p. (Paper from South African Industrial Chemist, Mar. 1961.)

Composition limits, mechanical properties, corrosion resistance and applications of austenitic, precipitation hardening, martensitic and ferritic stainless steels including those with rare and noble metal additions. Pitting, intercrystalline corrosion, knife-line attack and stress corrosion cracking mechanisms. 10 ref. (R-general; SS)

683-R. Some New Ideas of the Mechanism of Corrosion of Tinplate Cans by Fruit. Denis Dickinson. Corrosion Technology, v. 8, July 1961, p. 201-203.

Corrosive activity of fruits and vegetables on Sn-plated steel cans is discussed in terms of hydrogen evolution, anodic polarization and residual enzyme activity. Effect of pH of fruit juices on corroding potentials of Sn and Fe. Dissolution of Sn is prevented by lacquering. (R7n, R10b, T29p; ST, Sn, 8-62)

684-R. Preserving Water-Sealed Gasholders. R. Nichols. Corrosion Technology, v. 8, July 1961, p. 204-209.

Comparison of various primer, undercoat and finish coat systems used for preserving steel sheeting of water-sealed gasholders. Effect of surface treatment on performance and effective life of coatings. (R10b, T26q; ST)

685-R. 'Pipe-Life-Long' External Protection for Water Main. Corrosion Technology, v. 8, July 1961, p. 210.

Protection of Fe pipe against corrosion and moisture penetration by insulating and wrapping with rubber, adhesive compounds, absorbent cotton fabric (saturated with petroleum hydrocarbon, tannin and siliceous fillers) and bitumenized hessian tape. (R10e, T26r; Fe)

686-R. Effects of Fouling and Its Economical Importance. Pt. 2. A. Partington. Corrosion Technology, v. 8, July 1961, p. 211-214.

Effect of fouling and corrosion including rust blistering, roughening of paint film, slime film formation and the absorption of energy in the formation of waves and eddies on ship hull resistance and fuel consumption. Preventive measures include docking, shot blasting and repainting with antifouling compound. 11 ref. (R4b, R10, T22g)

687-R. (Translation-ConBur.) Effect of Stresses on the Characteristic Form

of the Polarization Curve in Corrosion Cracking of Metals. V. V. Romanov. Journal of Applied Chemistry of the USSR, v. 33, Aug. 1960, p. 1829-1832.

Study of stress variations as they affect cathodic and anodic branches of the polarization curves of D-16 Al alloy in a solution of NaCl plus H_2O_2. Explanation in terms of the electrochemical mechanism of corrosion cracking. (R1d, R1j, 3-66, 9-72; Al-b)

688-R. (Translation-ConBur.) Effect of Temperature on the Nature of Corrosive Destruction of Stainless Steel in Acid Solutions. A. I. Glukhova. Journal of Applied Chemistry of the USSR, v. 33, Aug. 1960, p. 1833-1839.

Corrosion resistance of 2Kh18N9 annealed steel in 0.1 N HCl at 0-110° C., 10 N HNO_3 at 60 and 120° C. and a mixture of HNO_3 and HCl at 20-115° C. 16 ref. (R6g, 2-61; SS)

689-R. (German.) Corrosion Protection in Reactor Construction. M. Stendel. Kerntechnik, v. 3, Apr. 1961, p. 169-170.

Review of corrosion protection of V2A steel by electrolytic passivation, electroplating and plastic coating. Parameters for testing mechanical properties of plastics. (R10, L-general, W11q; ST, NM-g33, 17-57)

690-R. (Russian.) Corrosive Stability of Steels and Zirconium Alloys in Boric Acid Solutions at Varying Temperatures. M. A. Tolsmaya, S. V. Bogamyreva and G. N. Grabusov. Atomnaya Energiya, v. 10, Mar. 1961, p. 222-226.

Carbon steel, alloy steel, nonrusting steel and Zr-Cb alloys are corrosion tested in an autoclave in boric acid solutions at temperatures from 40-335° C. and pressure up to 140 atm. for periods from 150-2000 hr. (R6g, 2-61, 3-67, 3-74; ST, Zr-b, Cb)

691-R. Salt Water Corrosion. R. H. Warring. Machinery Lloyd (Overseas Edition), v. 33, July 1961, p. 41-42.

Analysis of the mechanisms of salt water corrosion; electrochemical corrosion between two dissimilar metals in contact, impingement attack and the formation of concentration cells. Corrosion performances of various metals and alloys and preventive techniques. (R4b, R10)

692-R. (Japanese.) Studies on Corrosion of Aluminum Alloy for Water Cooled Reactor. Dynamic Corrosion Test of Aluminum in High-Purity Water Between 50-80° C. Light Metals, v. 11, Mar. 1961, p. 131-148.

Determination of corrosion rates, oxide film thickness, weight loss and corrosion microstructures for 2S Al and 1% Ni-Al alloys as a function of time, temperature and flow rate for exposure in high-purity water at 3-14 m. per sec. flow for times of 214 hr. to 1 yr. at 50-80° C. (R1h, R4, 1-54, T11; Al-b, 17-57)

693-R. (Russian.) High Temperature Oxidation of High Melting Alloys. Pt. 1. I. N. Frantsevich and R. F. Voitovich. Fizika Metallov i Metallovedenie, v. 10, Dec. 1960, p. 857-861.

Oxidation of Ti and binary W alloys with 15-75% Ti in air as a function of temperatures from 500-1000° C. and time. Effect of the Ti content on hardness of the alloys. 9 ref. (R1h, Q29n, 2-60; Ti-b, W)

694-R. (Russian.) High Temperature Oxidation of High Melting Alloys. Pt. 2. R. F. Voitovich. Fizika Metallov i Metallovedenie, v. 10, Dec. 1960, p. 862-865.

Zr and W-Zr alloys with 10-70% Zr are held in air at 500-900° C. for 0-11 hr. Effects of composition, temperature and time on oxidation. 5 ref. (R1h, 2-60, 2-61, 3-67; Zr-b, W)

695-R. (Russian.) "Caustic" Cracking of Steel Weldments. N. A. Langer, L. N. Yagupol'skaya and Z. V. Yushkevits. Avtomaticheskaya Svarka, Apr. 1961, p. 86-87.

Butt-welded M16S sheet is corrosion-tested in a solution containing 45% calcium nitrate and 35% ammonium nitrate. Samples exposed to the solution without previous heat treatment showed cracks after 24-48 hr. Heat treated samples showed cracks only after 240 hr. if at all. (R6, 2-64; ST, 7-51)

696-R. (Translation-ConBur.) The Effect of Corrosion Inhibtors on Mechanico-Corrosional Abrasion. E. M. Zaretskii, I. M. Katser and O. A. Petrova. Academy of Sciences of the USSR, Proceedings, Physical Chemistry Section, v. 135, Nov-Dec. 1960, p. 1117-1119.

The addition of sodium hexametaphosphate by an electrochemical process

to diminish the wear rate of 4 x 13 steel in aqueous solution. 9 ref. (R10b, 2-66; ST)

697-R. Protection of Cooling-Water Piping Systems Against Sea-Water Corrosion. J. Goudriaan. American Society of Mechanical Engineers, Paper no. 61-SA-36, 1961, 19 p. $1.

"In situ" applications of cement lining to protect corrosion resistance of unlined cast iron and PVC plastic piping, bitumen-lined steel piping and epoxy-lined steel piping. (R10, R4b, T29n, 4-60; CI, ST, NM-g)

698-R. (German.) Specific Reactions at Precious Metal Surfaces. A. Keil. Metall, v. 15, July 1961, p. 655-657.

Reactions of Ag and Au with S and O and adsorption and polymerization processes of plastic vapor on Pt metals at room and elevated temperatures. (R2r, R6, R7, 2-61; EG-c31, Ag, Pt)

699-R. (German.) Material Transfer Between Contacts of Precious Metals as Influenced by Preceding Heat Treatment Investigation on PdCu, AuCo and AuNi. W. Merl. Metall, v. 15, July 1961, p. 672-674.

Investigation of 500-800° C. heat treated contacts. Study of (60-40%) Pd-Cu, (97-3%) Au-Co, (90-10 and 84-16%) Au-Ni alloys. Material transfer and electrical and thermal conductivity as influenced by lattice transition or precipitation processes caused by heat treatment. (R2a, N-general, P-general, 2-64, T1; EG-c31, 17-57)

700-R. (German.) Antitarnishing of Silver. H. C. A. Burkhardt and H. Schlegel. Metall, v. 15, July 1961, p. 643-654.

The corrosion of Ag is reviewed in terms of nontarnishing Ag alloys, tarnishing of electrodeposited Ag-Cd alloys as influenced by current conditions, temperature and free cyanide, testing for susceptibility to tarnishing and control of tarnishing by passivation with Sn and by protective coating. (R2r, R10, L1n; Ag)

701-R. (Italian.) Metallic Materials Resisting Sulphuric Solutions. Il Nickel, no. 91, Apr. 1961, p. 14-18.

Study of the corrosion resistance of alloys and metals such as stainless steels, Ni-Cr alloys, Ta, Pt and cast iron placed in contact with sulphur acid solutions. Effect of concentration, temperature and flow velocity of the solutions on corrosive attack. (R6g, R7k; SS, Ni-b, Cr, Ta, Pt, CI)

702-R. Titanium Submerged Pumps. Light Metals, v. 24, July 1961, p. 193.

Application of Ti in a pump for use with 99.8% HNO_3, the corrosion resistance of Ti being compared favorably above 18-8 columbium stainless steel. (R6g, W13d; Ti, 17-57)

703-R. Electrochemical Corrosion of Platinum in Hydrochloric Acid Solutions. J. Llopis and A. Sancho. Electrochemical Society, Journal, v. 108, Aug. 1961, p. 720-726.

Attack by d-c. is increased by increasing temperature, high chloride ion concentration and high acidity and increases when a-c. is superimposed. If d-c. is high enough for passivation, no corrosion occurs until a critical value of a-c. is reached. At this point corrosion begins, increases and goes through a maximum with increasing a-c. 31 ref. (R1j, 2-60, 2-61; Pt)

704-R. The Influence of Iodide Ions and Carbon Monoxide on the Anodic Dissolution of Active Iron. K. E. Heusler and G. H. Cartledge. Electrochemical Society, Journal, v. 108, Aug. 1961, p. 732-740.

Adsorption of iodide ions on Fe is measured as a function of iodide ion concentration and anodic current density. Effect of iodide ions and carbon monoxide depend upon the amount adsorbed on the Fe surface. 12 ref. (R1a, P17c, 2-66; Fe, I)

705-R. (English.) Studies on Rust Inhibitors. Pt. 2. The Rust-Preventive Properties of Petroleum Sulphonates and Organic Carboxylic Acids. Motoo Koike and Tatsuo Abe. Journal of Japan Oil Chemists Society, v. 10, May 1961, p. 275-282.

Study of the effects of the polar groups of rust inhibitors by corrosion tests using various petroleum sulphonates and carboxylic acids. The anticorrosion properties of petroleum sulphonates

were indicated in the salt water immersion test, the nonferrous metal immersion test and the heat stability test. Rust inhibitors prepared with carboxylic acids added to lubricating oils showed good anticorrosion results in the shed storage conditions at a relatively low temperature. (R10b)

706-R. Australian Product Combats Pipe Corrosion in New Water Reticulation Scheme. Chemical Processing, v. 14, June 1961, p. 32-33.

A corrosion inhibitor "Taramel" is used to protect a steel pipe line for 50-100 yr. Production of high-grade enamels are discussed in terms of their application and temperature. (R10b, T26r; ST)

707-R. Caustic Stress Corrosion. Earl Howells. Chemical Processing, v. 14, June 1961, p. 35-37.

Study of the effect of hydroxide, stress levels and dilute caustic water solutions on cracking of stainless steel as a function of temperature and time. (R6j, R10, 2-61, 3-67; SS)

708-R. Cathodic Protection for an Uncoated Aluminum Pipeline. J. F. Whiting and T. E. Wright. Corrosion, v. 17, Aug. 1961, p. 9.

Mg anode beds are used in a hot spot cathodic protection program to prevent pitting of a thin-walled AA 3003 alloy pipeline carrying natural sweet gas. (R10d, R2j, T26r; Al-b)

709-R. Failure of High Strength 410 Bolts in Ammonia Contaminated Water. H. W. Wilten. Corrosion, v. 17, Aug. 1961, p. 10-11.

Stress corrosion cracking and subsequent failure of bolts submerged in a water jacket in an ammonia plant are traced to contamination of the water by leaking NH_3 and HNO_3. 7 ref. (R1d, R6, T7f; SS)

710-R. Reducing Corrosion of Power Plant Condenser Tubing With Ferrous Sulfate. Thomas W. Bostwick. Corrosion, v. 17, Aug. 1961, p. 12-16, 18-19.

Additions of ferrous sulphate to river water inhibit corrosion of aluminum brass tubing by forming a protective iron oxide film. The film is maintained by treatments at irregular intervals. 5 ref. (R10b, R4a; Cu-n, Al, 4-60)

711-R. Corrosion Control Aspects of Circulating Cooling Water Treatment. J. M. Brooke and B. G. Witt. Corrosion, v. 17, Aug. 1961, p. 22-23, 25.

Treatment of cooling water to control scale formation on the cooling surface and to prevent corrosion of metal in contact with cooling water, fouling of the cooling surfaces and deterioration of cooling tower wood. Effects of pH, blowdown control and low-alkalinity make-up. (R4a, R10b, W10h)

712-R. Relative Corrosion Resistance of Basic Oxygen Steel and Open-Hearth Steel. R. C. Talbot, R. N. Hobbs and W. A. Szymanski. Corrosion, v. 17, Aug. 1961, p. 83-84.

Forty day corrosion tests on pickled and degreased specimens exposed to NaCl, NaCl + NaOH, steam, steam condensate, city water, KOH, Cl, $HClO_4$ and H_2SO_4. (R4, R6, R11; ST)

713-R. Microbiological Corrosion in Waterfloods. J. M. Sharpley. Corrosion, v. 17, Aug. 1961, P. 92-96.

An hypothesis is advanced to explain a portion of the mechanism underlying bacterial pit corrosion. Role of sulphate-reducing bacteria, correlation between bacteriological examination and corrosion damage, cultural techniques, laboratory and field evaluation techniques and detection of sessile microorganisms. (R1g)

714-R. Use of Pipe-to-Soil Potential in Analyzing Underground Corrosion Problems. B. Husock. Corrosion, v. 17, Aug. 1961, p. 97-101.

Use of potential measurements to distinguish stray current corrosion from galvanic corrosion in coated or bare Cu or steel pipelines. General rules are given for the interpretation of a set of potential measurements in evaluating an underground corrosion problem in a non-stray current area. (R8, T26r; Cu, ST)

715-R. Use of Differential Thermal Analysis in Exploring Minimum Temperature Limits of Oil-Ash Corrosion. Norman D. Phillips and Charles L.

Wagoner. Corrosion, v. 17, Aug. 1961, p. 102-106.

Differential thermal analysis and pilot plant corrosion testing of melting and freezing characteristics of oil-ash deposits obtained from corrosion of superheater alloys. 11 ref. (R7d, R11, S11g, T26q; SS)

716-R. Factors Involved in Corrosion of Lead Cable Sheath. K. G. Compton. Corrosion, v. 17, Aug. 1961, p. 115-118.

Effect of stray current, galvanic cells, ionic content of soils, chemical corrosion, Pb sheath with cinders, use of steel armoring tape, factors in cathodic protection and soil burial tests. Solubility of Pb in solutions of varying pH, electrochemical behavior of Pb and potential of Pb-Sb cable sheath in soils as a function of pH. (R8, R10, R11a, P15; Pb)

717-R. Choosing Alloys for 1200° F. + Corrosive Applications. John J. Moran. Chemical Processing, v. 24, Aug. 1961, p. 49-53.

Behavior of Pt, Au, Ni, Inconel, Hastelloy B and C, stainless steels, carbon steel, Monel and Ni-Cr alloys in dry HCl and nitriding atmospheres. Effect of H_2S atmospheres; effect of carburization on ductility and impact resistance; methods to combat hydrogen attack; creep and stress rupture considerations; and effect of Si, Mo, Ti and Cb on sigma formation. (R6, 2-62, N6p, 2-60, Q-general, 2-64; Pt, Au, Ni, SS, CN)

718-R. Corrosion Keys--Tantalum. D. O. Jones and D. F. Taylor. Chemical Processing, Aug. 1961, p. 73-75.

Corrosion resistance of Ta to H_2SO_4, HCl, H_3PO_4, fuming H_2SO_4, HF, HNO_3 and other acids, KOH or NaOH solutions, liquid metals and HCl gas in various concentrations from 100-475° F. Density, strength and hardness, weldability and history of the element. (R6, 2-61, P10a, Q27a, Q29n; Ta)

719-R. Bright Metal Trim on Automobiles Evaluated. G. G. Levy. Inco Nickel Topics, v. 14, 1961, p. 6-7.

Corrosion resistance of duplex Ni-Cr, Cu-bright Ni-Cr and Ni-Cr plate on various base metals. Effects of plating thickness and composition and number of Ni layers. Comparison to 430 stainless steel and anodized Al. (R-general, 2-60, T21; Ni-b, Cr, 8-62, SS, Al, 8-73)

720-R. (Spanish.) Corrosion in the Potash Industry. Lamberto-Antonio Rubio Felipe. Instituto del Hierro y del Acero, v. 14, Jan-Mar. 1961, p. 293-301.

Corrosion of Cu and steel chemical equipment in the presence of a solution obtained during treatment of sylvinite with water at 25° C. Interaction of Cu and Fe ions and dissolved O. Cathodic protection by using Zn and Mg anodes. (R6k, R10d, T29m; ST, Cu, Zn, Mg)

721-R. Fasteners Versus Galvanic Corrosion. Francis L. LaQue and W. D. Mogerman. Fasteners, v. 16, Spring-Summer 1961, p. 12-18.

Galvanic current as a function of corrosion of metal fasteners. Relationships of base and noble metals are investigated in experimental conditions and a galvanic series is tabulated. (R1a, R11, 1-54, T7f)

722-R. Inhibition of the Corrosion of Aluminum-Zinc Alloy in Acid Solutions. K. G. Sheth and T. L. Rama Char. Journal of Scientific & Industrial Research, v. 20D, May 1961, p. 201-202.

Determination of the corrosion rates for aircraft Al-Zn alloy, DTD 687, in HCl solutions (0.05N-3N) at 32° C. in the presence of organic inhibitors. Acridine, nicotinic acid, strychnine and quinine hydrochloride are tested as inhibitors. 8 ref. (R6g, R10b; Al-b, Zn)

723-R. Metallurgical Problems of the Turbine Engine. E. R. Gadd. Chemistry & Industry, June 17, 1961, p. 811-816.

Investigation of the creep problem in turbine blades exposed to high temperatures, oxidation, air or sea water corrosion and abrasion. Some of these problems are solved by using stainless steel, Cr-Ni alloys or by plating or coating exposed surfaces. (R-general, T7h; SGA-g, SS, Cr-b, Ni)

724-R. (German.) Stress Corrosion of Soft Steel in Calcium-Nitrate Solutions. Anton Baumel and Hans-Jurgen Engell. Archiv fur das Eisenhuttenwesen, v. 32, June 1961, p. 379-386.

Current-density and potential curves of soft steel specimens in aqueous solutions of KNO_3-$NaNO_3$, and KCl-$(NH_4)_2$ SO_4 and during tensile stressing in boiling (115° C.) $Ca(NO_3)_2$ solution. 19 ref. (R1d, R6j, 3-66; ST)

725-R. (German.) Investigation of Pitting on Chemically Resistant Austenitic Steels. Erwin Brauns and Wilhelm Schwenk. Archiv fur das Eisenhuttenwesen, v. 32, June 1961, p. 387-396.

Pitting on homogenized (1050-1100° C.) and pickled specimens of austenitic steels (18% Cr, 0-12% Ni, 0-2.3% Mo) is investigated using the Turnbull blue color reaction by microscopy and by corrosion resistance and galvanostatic and potentiostatic polarization measurements. 17 ref. (R2j; SS-e)

726-R. (Translation-Brutcher no. 5199.) On the Role of Hydrogen in Corrosion Fatigue Failure of Steel. R. I. Krip'yakevich. Dopovidi Akademii Nauk Ukrainskoi RSR, v. 3, Mar. 1961, p. 325-327.

Superposition of cathode potential on specimens being fatigue tested in a corrosive agent to study the cathodic processes with special reference to electrolytic loading with hydrogen. (R1e)

727-R. (Italian.) Atmospheric Corrosion of Metals. Alberto Barberis. Rivista Di Ingegneria, v. 11, Aug. 4, 1961, p. 245-248.

Corrosion of Fe, Cu, Zn and Pb by SO_2, NO_2, NH_4Oh and solid residues. Experiments show a seasonal dependance for corrosive activity, since the winter atmosphere is more humid and contains a higher percentage of SO_2. (R3; Fe, Cu, Zn, Pb)

728-R. (Russian.) Structure of Oxide Films and Corrosion Resistance of Pearlitic Steel as Functions of Its Composition. S. A. Yuganova and Yu. G. Sorokina. Metallovedenie i Termicheskaya Obrabotka Metallov, June 1961, p. 53-56.

15Kh4M1F, 15Kh7M1F, 15Kh2M1F and 15Kh1M1F steels with varying Cr, Si, Al, Co, W and B contents are heated in air and held at 300-600° C. for 1 hr. and at 600° C. for 1-1000 hr. Corrosion behavior is studied as a function of composition. 7 ref. (R1h, 2-64; ST, 2-60)

729-R. (French.) Effect of Medium and Interface pH on Inhibition of Metals. J. Frasch. Corrosion et Anticorrosion, v. 9, July-Aug. 1961, p. 225-234.

Action of chromates, nitrites, phosphates, Zn salts, amines and complexes of these as inhibitors added to corrosive media on the formation of protective and corrosive films on metals as a function of pH of the solution. (R10b)

730-R. (French.) Recent Progress Report of the Corrosion Resistance of High Nickel Alloys. G. L. Swales. Corrosion et Anticorrosion, v. 9, July-Aug. 1961, p. 235-247.

The alloy systems Ni-Cr, Ni-Mo, Ni-Mo-Cr, Ni-Cr-Cu-Mo, Ni-Cr-Fe, Ni-W as well as commercial alloy products are evaluated in terms of resistance to corrosive action of acids, combustible fuels and fused salts (fluorides) as functions of concentration, temperature and time. (R6, R7d, 2-60, 2-61, 3-67; Ni-b)

731-R. Physical Metallurgy of Refractory Metals. B. F. Brown. Report of NRL (Naval Research Laboratory) Progress, July 1961, p. 24-25. (Available as PB 171320 from U. S. Office of Technical Services, Washington 25, D. C.)

Study of Cb-Zn compounds to develop oxidation-resistant coating for refractory metals. Vapor pressure is measured as a function of temperature; kinetics of compound formation and mechanism of oxidation are studied. (R1h, P12c, 2-61, P13; SGA-h, Cb, Zn)

732-R. Corrosion Mechanisms (The Effect of Nonadherent Corrosion Products on Localized Attack of Steel Exposed to Aqueous Media at Elevated Temperature). M. Krulfeld and M. C. Bloom. Report of NRL (Naval Research Laboratory) Progress, July 1961, p. 26-28. (Available as PB 171320 from U. S. Office of Technical Services, Washington 25, D. C.)

Effects of H_2O_2 concentration and exposure time on localized attack under the corrosion product alpha-Fe_2O_3. Steel specimens are exposed to H_2O_2 at 600° F. for one day to four weeks. (R6p, R1a, 2-62, 3-67; ST)

733-R. Cathodic Protection Studies (Determination of the Driving Potentials and Effective dc Resistance of Several Galvanic Anodes). L. J. Waldron and M. H. Peterson. Report of NRL (Naval Research Laboratory) Progress, July 1961, p. 29-30. (Available as PB 171320 from U. S. Office of Technical Services, Washington 25, D. C.)

Driving voltage (the effective difference in potential between anode and cathode) and internal resistance (electrolytic) between anode and calliode are studied for a cell consisting of a steel sea wall cathode and Zn, Mg and Al-Zn anodes. (R10d; ST)

734-R. Some Comments on the Necessity of Preventive Maintenance in Painting Schedules. Current Engineering Practice, v. 3, June 1961, p. 14, 17.

Prevention of corrosion of industrial structures and machinery through proper preparation of surface (shot blasting, flame cleaning), priming and painting. (R10b, L10, L26n; ST, SGB-s)

735-R. How Small Electrical Currents Reduce Salt-Water Corrosion. Iron Age, v. 188, Aug. 17, 1961, p. 100-101.

Corrosion test results on steel rods exposed to salt water for 5 yr. show that coatings which form on the cathodically protected rods reduce the amount of applied current needed for protection. (R10d; ST)

736-R. (Japanese.) The Relationship Between Rust-Preventive Additives and Their Bases. Pt. 4. Studies on Rust Inhibitors. Motoo Koike, Yoshiharu Takemoto and Tatsuo Abe. Metal Finishing Society of Japan, Journal, v. 12, June 1961, p. 226-231.

Corrosion protection properties of various oil, solvent, asphalt and organic compounds as a function of quantities of rust inhibitors added to the base compounds are investigated by salt spray, SO_2, humidity and weathering tests on coated steel panels. 13 ref. (R10f, R11, L26, 2-60; ST)

737-R. (Russian.) Oxidation of Titanium From 300-600° C. D. I. Lainer and M. I. Tsypin. Izvestiya Akademii Nauk SSSR, Otdelenie Tekhnicheskikh Nauk, Metallurgiya i Toplivo, Jan. 1961, p. 146-147.

One end of a wedge-shaped sample is held at 800° C. and the thickness of the oxide film forming at various temperatures below 800° C., corresponding to the distance measured from the heated end, is estimated by the color resulting from light interference. Film thickness as a function of temperature and time. 4 ref. (R1h, 2-61, 3-67; Ti)

738-R. An Experimental Survey of Rust Preventives in Water. Pt. 1. Methods of Testing. P. Hersch, J. B. Hare, A. Robertson and Sheila M. Sutherland. Journal of Applied Chemistry, v. 11, July 1961, p. 246-250.

Determination of minimum threshold concentration at which an additive prevents corrosion of ferrous materials in nonacid aqueous solutions containing dissolved air. Weight-loss experiments are used to measure inhibition of corrosion of Zn. (R10b; Fe, Zn)

739-R. An Experimental Survey of Rust Preventives in Water. Pt. 2. The Screening of Organic Inhibitors. P. Hersch, J. B. Hare, A. Robertson and Sheila M. Sutherland. Journal of Applied Chemistry, v. 11, July 1961, p. 251-265.

Screening of over 400 possible inhibitors, mainly organic, in nonacid aqueous solutions containing dissolved air for use in preventing corrosion of ferrous alloys. Polarization experiments. Inhibitors tested include sodium oxide, potassium ferrocyanide, carboxylates, ethers, sulphonates, amines, nonbasic nitrogen compounds and organic phosphorus compounds. 11 ref. (R10b; Fe)

740-R. An Experimental Survey of Rust Preventives in Water. Pt. 3. Some General Results. P. Hersch, J. B. Hare, A. Robertson and Sheila M. Sutherland. Journal of Applied Chemistry, v. 11, July 1961, p. 265-271.

Threshold concentration values of inhibitors given in tabular form. Table permits comparison of disk with drop tests, of brown with blue rusting tests, of chloride solutions with H_2O, of two complexant media with water and with each other and of mild steel with cast irons and Zn. Effect of pH and geometrical factors on thresholds. An hypothesis is presented to explain the action of some types of rust inhibitors. 8 ref. (R10b; CN, CI, Zn)

741-R. The High Temperature Steam Corrosion of Columbium-Vanadium Alloys. H. A. Fisch, D. L. Douglass and B. E. Dearing. Paper from "Columbium Metallurgy".

v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 597-612.

Corrosion behavior of binary Cb-V alloys containing up to 8.9 at.% V studied in steam at 360-482° C. Corrosion kinetics appear to fit a cubic rate law, the rates decreasing with increasing solute. Dilute alloys, containing less than 1.2 at.% vanadium form a Cb_2O_5 film, whereas alloys containing from 1.2 to about 3.6 at.% vanadium form a duplex scale of Cb_2O_5 and CbO_2. The 8.9 at.% alloy formed only CbO_2 which accounts for the superior corrosion resistance. (R4d, R1, 2-60, 2-61; Cb-b, V)

742-R. The Ignition of Columbium and Selected Alloys. J. W. Clark. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 615-646.

Effects of environmental parameters on the oxidation characteristics of Cb and other alloys investigated at 1300-1500° C. When the energy release due to the exothermic oxidation reaction exceeds the heat removed by conduction, convection and radiation cooling, a spontaneous, self-propagating temperature rise occurs. This phenomenon, which has been termed "ignition," is observed in dynamic oxidation of unalloyed Cb at temperature of 1470° C. (R1h, 2-62; Cb-b)

743-R. The Oxidation of Columbium at Low Oxygen Pressures. H. Inouye. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc. New York 1, 1961, p. 649-664.

The oxidation of unalloyed Cb in O at pressures between 3 x 10-5 and 5 x 10-3 mm. Hg and temperatures of 850, 1000 and 1200° C. proceeds principally by solution of oxygen, internal oxidation, film formation and by an oxide-gas reaction. Characteristic rate curves for each of the oxidation stages are found and correlated with the formation of Cb-O solid solutions, CbO, CbO_2 and Cb_2O_5. (R1h, 2-61; Cb)

744-R. "Break-Away" Phenomena in the Oxidation of Columbium Single Crystals. R. E. Pawel, J. V. Cathcart and J. J. Campbell. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc. New York 1, 1961, p. 667-682.

Oxidation rate measurements and oxide morphology studies on single crystal specimens of Cb indicates that the process of gaseous oxidation from 400-245° C. is particularly dependent upon the crystallographic orientation of the metal. Specimens oriented within about 25° of (100) oxidize at least in the initial stages at a much slower over-all rate than is the case for the remaining orientations. (R1h, 2-61, 3-72; Cb, 14-61)

745-R. The Hot Water Corrosion Resistance of Columbium and Columbium Alloys. W. D. Klopp, W. E. Berry and D. J. Maykuth. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 685-718.

Corrosion studies conducted in 600 and 680° F. water and in 750° G. steam on a large number of wrought binary and ternary Cb alloys. High purity Cb shows a greater degree of corrosion resistance than the commercial grade. However, base metal purity does not appear to have a significant effect on the corrosion behavior of Cb alloys. The effectiveness of binary Ti, Zr and V and of ternary Ti and Cr combinations is outstanding. (R4, 2-60, 2-61; Cb-b, Ti, Zr, V, Cr)

746-R. Oxidation Rate of Columbium as a Function of Temperature and Pressure. J. F. Brady and J. N. Ong, Jr. Paper from "Columbium Metallurgy". v. 10. Metallurgical Society of AIME. Interscience Publishers, Inc., New York 1, 1961, p. 719-737.

A simple model involving interactions between interstitial oxygen atoms in solution in a metal lattice accounts for the experimentally observed rate versus temperature cusps in Cb and correlates the experimental work over a wide range of experimental conditions. An analysis of data is performed under assumption of equilbrium but it is shown that subsequent kinetic processes may occur by the necessary extension of the model to include Schottky defects (vacancies). (R1h, M26s, 2-61, 3-74; Cb)

747-R. Developments in the End Use of Welded Pressure Vessels. G. K. Dudgeon. Canadian Welder, v. 52, Aug. 1961, p. 9-10, 12, 15.

Prevention and control of corrosion due to salts and acids in welded pressure vessels used in oil refinery units for topping and vacuum, catalytic cracking, naphtha desulphurization and catalytic reforming, distillate desulphurization and alkylation. (R10, R7, T26q, T29n; 7-51)

748-R. Stainless Steel for Corrosion and Oxidation Resistance. F. P. A. Robinson. South African Industrial Chemist, v. 15, Mar. 1961, p. 42-50.

Composition of conventional and newly developed stainless steels. Applications and mechanical working characteristics. Types of decomposition, their causes and means of prevention. (R-general, R1h, Q-general, 2-60; SS)

749-R. Atmospheric Corrosion on the South-East Coast. K. S. Rajagopalan, P. L. Annamalai and M. Sundaram. Journal of Scientific & Industrial Research, v. 20D, June 1961, p. 226-232.

Study of corrosion of mild steel, Zn, Al and Cu specimens exposed to marine and marine-industrial atmospheres containing sea water spray and SO_2 for 1-2 yr. periods at various sites along the coast of India. Corrosion rates are affected by both atmospheres and general climate conditions. 9 ref. (R3; CN, Zn, Al, Cu)

750-R. Influence of Anions and Acacia as Inhibitors on the Corrosion of Brass at Different PH Values. J. D. Talati, M. N. Desai and A. M. Trivedi. Journal of Scientific & Industrial Research, v. 20D, June 1961, p. 236-237.

Corrosion of 70-30 brass in solutions containing phosphate and acetate ions at 1.60-12.20 pH, with and without 1% additions of acacia powder. In the alkaline range phosphate and acetate ions act as inhibitors forming stable films. Acacia acts as an inhibitor in the acidic range but enhances corrosion in the alkaline range. (R10b, R1j, 2-60; Cu-n)

751-R. Oxidation of Iron in the Temperature Range of 260°-470° C. E. J. Caule, K. H. Buob and M. Cohen. Electrochemical Society, Journal, v. 108, Sept. 1961, p. 829-834.

The kinetics of the oxidation of ingot Fe in 19 mm. of O_2, rate constants and nature and composition of oxide films formed are studied as a function of time and temperature. Data are given for weight gain and order of occurrence of wustite, magnetite and hematite layers. 8 ref. (R1h, 2-61, 3-67; Fe)

752-R. The Annealing of Oxide Films on Iron. E. J. Caule and M. Cohen. Electrochemical Society, Journal, v. 108, Sept. 1961, p. 834-836.

The annealing reaction in vacuum of thin films of magnetite and hematite on Fe is studied at 463° C. The gravimetric curves obtained for growth of magnetite and decay of hematite are compared with the curves of growth of both during oxidation at 5.75 cm. pressure of oxygen. 4 ref. (R1h, 2-64; Fe)

753-R. Corrosion and Electrochemical Behavior of Chromium-Noble Metal Alloys. N. D. Greene, C. R. Bishop and M. Stern. Electrochemical Society, Journal, v. 108, Sept. 1961, p. 836-841.

Alloying Cr with 0.5% Pt, Pd, Ir, Rh, Ru or Os markedly improves its corrosion resistance to nonoxidizing acids such as H_2SO_4 or HCl. Rh, Pd or Os have little effect on resistance of an oxidizing acid such as HNO_3 while Pt, Ir or Ru greatly increases corrosion rates. The phenomena are related to the passive and transpassive behavior or Cr and the electrochemical nature and corrosion behavior of the metal. 28 ref. (R6g, P15, 2-60; Cr-b, Pt, Pd, Ir, Rh, Ru, Os, EG-c)

754-R. Microstructure Vs. Corrosion Resistance. W. K. Boyd. Metals Engineering Quarterly, v. 1, Aug. 1961, p. 15-29.

Analysis of the relationship between crystal structure and corrosion phenomena. Data are presented for stainless casting alloys, Ni-base casting alloys, wrought Ti and Zr-U alloys. 6 ref. (R4, M27, 2-60; SS, Ti-b, Zr-b, Ni-b)

755-R. (Ukranian.) Electric Transfer of Solid Gold. P. P. Kuzmenko and V. S. Hrim. Ukraninskii Fizichnii Zhurnal, v. 6, Jan. 1961, p. 140-142.

Determination of oxidation, evaporation and mass transfer in two samples of Au (99.99%) joined together as cathode and anode and activated by a d.c. current.

Measurement of mass transfer (from cathode to anode) by analytic scales. Tabulation of data. 10 ref. (R2a, R1h, N16n, 1-52; Au)

756-R. The Oxidation of Reactor Steels in Carbon Dioxide. C. Moore and T. Raine. Paper from "Steels for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 136-156.

Effects of carbon dioxide with small amounts of carbon monoxide and water vapor at elevated temperatures on various commercial and special low-alloy steels studied as part of a development program for steels to be used in graphite-moderated carbon dioxide cooled nuclear reactors. At the higher temperatures, nonuniform attack with attendant carburization at the grain boundaries is observed on most of the steels. (R1h, 2-62, 2-66, T26q; AY, 17-57)

757-R. The Corrosion of Pressure Circuit Materials in Boiling and Pressurized-Water Reactors. F. L. LaQue and M. A. Cordovi. Paper from "Steels for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 157-178.

Potential corrosion and erosion problems can be alleviated effectively by proper selection of materials for critical areas in such plants. The short operating time accrued to date in nuclear central stations does not afford a basis for assessment of the full extent to which deposition of activated corrosion products throughout the pressure circuit systems might complicate plant maintenance. Decontamination procedures give assurance that disposal of any activated crud can be accomplished in a practical manner. (R-general, T26q, T11)

758-R. The Corrosion of Iron and Steel in Liquid Sodium. C. Tyzack. Paper from "Steels for Reactor Pressure Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 179-195.

Two types of processes may give rise to loss in metal section-solution or mass transport phenomena and processes involving chemical reactions between metal surfaces and impurities in the sodium. General thermodynamic considerations of the oxidation process. (R6m, R1h, 3-69; Fe-b, Na)

759-R. Why Does Stainless Steel Corrode? Morgan Sinclaire and Eugene Phillips. Metal Progress, v. 80, Sept. 1961, p. 92-96.

Unexpected corrosion of stainless steel can occur unless certain precautions are taken during fabrication and while parts are in service. Sensitization, carburization, sources of hydrochloric acid and dirt are the main causes of failure. (R-general, 2-66; SS)

760-R. Exposure Testing of Protective Paints for Metals. C. A. Lominska. Materials Research & Standards, v. 1, Aug. 1961, p. 620-624.

Preparation, installation and testing of painted or galvanized steel panels, as mounted in exposure fences and marine racks, to gage the effect of weather and salt water on corrosion resistance. (R3, R4, 1-54; ST, 8-65, 8-70)

761-R. Stress-Corrosion Cracking of the AZ31B Magnesium Alloy. Hugh L. Logan. Journal of Research, National Bureau of Standards, Engineering and Instrumentation, v. 65C, July-Sept. 1961, p. 165-169.

The incubation period prior to stress-corrosion cracking and its initiation in AZ31B Mg alloy specimens exposed to constant tensile load in an aqueous solution of NaCl and K_2CrO_4 are studied using electrochemical solution potential-time and extension-time oscillograph curves obtained simultaneously. Strain rate associated with crack initiation is analyzed with crystallographic data given for stress corrosion-cracked and crack-free crystals. 10 ref. (R1d, M-general, 2-66, 3-68; Mg-b)

762-R. Coatings Formed on Steel by Cathodic Protection and Their Evaluation by Polarization Measurements. W. J. Schwerdtfeger and Raul J. Manuele. Journal of Research, National Bureau of Standards, Engineering and Instrumentation, v. 65C, July-Sept. 1961, p. 171-181.

Carbonate and silicate protective coatings observed on cathodically protected cold rolled steel rods exposed to city water containing 3% NaCl addition. The instantaneous corrosion rates on the coated rods, scratched and unscratched, while without protective currents are measured by changes-in-slope in polarization curves. (R10d, R2; ST)

763-R. In-Pile Corrosion of an Aluminum Alloy. Noel P. Shiells, Robert O. Bolt and James G. Carroll. Nucleonics, v. 19, Sept. 1961, p. 99, 102-103.

The composition, causes and mechanism of corrosive deposits on a 6061 T6 Al alloy in-pile shuttle-tube apparatus are studied as functions of the design and operating conditions of the shuttle-tube, the effects of air and water radiolysis and the formation of nitric acid. 21 ref. (R1, R6g, T11, 1-53, 2-66, 2-67; Al-b)

764-R. (German.) New Applications of Lead. E. Meckelburg. Metall, v. 15, Aug. 1961, p. 780-781.

Review of applications and properties such as corrosion and radiation resistance of "Insmetals" which are metals plated with Pb by rolling, pressing or liquid coating including "Bauxilium" (Al or Al alloy base), "Cupralum" (Cu or Cu alloy base), "Ferrolum" (steel base), "Nicrolum" (alloyed steel base) and "Ferro-Nicrolum" (alloy steel-plated steel base). (R-general, Q-general, 2-67; Al-b, Cu-b, Fe-b, 8-65, 8-66, Pb, 17-57)

765-R. Corrosion Problems and Their Treatment--Materials of Building Construction. Corrosion Prevention & Control, v. 8, Aug. 1961, p. i-iv.

Environmental corrosive conditions in underground pipes, water and heating systems, gutters, window frames and outside metalwork are discussed with methods of preventing and combatting domestic corrosion. (R-general)

766-R. Oxide Films Formed on Metal Surfaces During Corrosion. Corrosion Prevention & Control, v. 8, Aug. 1961, p. v-vi, viii.

Thicknesses of cuprous oxide and cupric oxide films are measured on four different crystallographic planes of Cu single crystals immersed in oxygenated water to determine the effect of oxygen concentration on thickness and rate of film formation. (R1h, 2-66; Cu, 14-62, 14-68)

767-R. Titanium in Dilute Acids. Corrosion Prevention & Control, v. 8, Aug. 1961, p. vii-viii.

Pure Ti and Ti alloys are tested in sulphuric acid and phosphoric acid solutions at room temperature and 80° C. to determine resistance to acid attack. The use of anodic protection to prevent Ti corrosion is investigated. (R6g, Ti)

768-R. Advances in Nickel and Chromium Plating. T. E. Such. Corrosion Prevention & Control, v. 8, Aug. 1961, p. 29-35.

Mechanisms of corrosion of Ni-Cr plating are considered as functions of atmosphere, composition, thickness, possivity and plating parameters. Determination of the coating system giving maximum corrosion protection. (R1, 2-60, 2-66; Ni, Cr, 8-62)

769-R. Corrosion Resistance of Vitreous1 Enamel. R. H. Chandler. Corrosion Prevention & Control, v. 8, Aug. 1961, p. 42, 41.

The testing of vitreous enamel coatings used in washing machine tubs by alkaline corrosive solutions containing ingredients found in commercial detergents. Determination of the corrosion resistance of the enamels, of the effects of detergents upon corrosion resistance and of the composition of a standard test solution for enamels. (R6j, 1-54; 8-71)

770-R. The Transition From Internal to External Oxidation and the Formation of Interruption Bands in Silver-Indium Alloys. R. A. Rapp. Acta Metallurgica, v. 9, Aug. 1961, p. 730-741.

Wagner's theory for the transition as caused by the blocking of the diffusion processes upon the formation of a critical vol. % of the internal oxide in the matrix is evaluated for the Ag-In system and tested at 550° C. at oxygen pressures of 1 atm. to 10^{-4} mm. Hg. The formation of 30% In_2O_3 in the Ag matrix is a valid criterion for the transition. The formation of interruption bands when a sudden pressure drop occurs during the internal oxidation is evaluated with the conclusion that a double reversal of the oxidation front occurs as suggested by Meijering. 16 ref. (R2s, R1h, 2-60, 2-61, 3-74; Ag-b, In)

771-R. (Italian.) Department of Electrochemistry. Istituto Sperimentale dei Metalli Leggeri--Rapporto Annuale 1960, 1961, p. 47-57.

Study of corrosion phenomena in the chemical industry. Effect of climate, acids, bases and temperature on corrosion of light alloys. Control of efficiency

of protective coatings and investigation of anodic current as an accelerating medium in corrosion testing of Al-Mg alloys. (R6, 2-61, R10c, R11; EG-a39, Al-b, Mg)

772-R. (Translation-ConBur.) Corrosion and Electrochemical Behavior of Stainless Steels During Cathodic Polarization in Nitric Acid Solutions. E. N. Mirolyubov, M. M. Kurtepov and N. D. Tomashov. Academy of Sciences of the USSR, Bulletin, Division of Chemical Science, June 1960, p. 949-954.

Characteristics of dissolution of 1Kh18N11B steel in nitric acid solution during cathodic polarization are studied as functions of steel potential, acid concentrations and temperature in the corrosion rate. Corrosion of active stainless steel in dilute nitric acid is indicated to be controlled by diffusion because of the slow supply of acid to the steel surface. 14 ref. (R6g, 2-60, 2-61; SS)

773-R. (Translation-ConBur.) Some Results of a Study of Structural Transformations and Properties of the Oxide Film on Aluminum Surfaces. A. Domony and E. Lichtenberger. Journal of Applied Chemistry of the USSR, v. 33, Sept. 1960, p. 1920-1931.

Hydration and structural transformation of hydrargillite, boehmite, alumina and other oxides are studied as functions of temperature, pressure and Al ion diffusion. 20 ref. (R1h, N-general, 2-61, 3-74; Al-b, 14-68)

774-R. (Translation-ConBur.) Action of Concentrated Nitric Acid on Carbon Steel. I. P. Mukanov, S. D. Beskov and L. I. Kochetkova. Journal of Applied Chemistry of the USSR, v. 33, Sept. 1960, p. 2054-2063.

Study of the nature and mechanism of intergranular corrosion of Armco iron and 20, 40 and 70 steels with carbon contents of 0.195%, 0.39% and 0.69% respectively. Corrosion and dissolution rates are determined as a function of temperature and acid concentration at 20-60° C. at up to 500 hr. exposure. 11 ref. (R6g, 2-61; CN)

775-R. (Translation-ConBur.) Action of Molten Halides on Nickel, Copper, Iron and Certain Steels. E. I. Gurovich. Journal of Applied Chemistry of the USSR, v. 33, Sept. 1960, p. 2064-2068.

Measurement of corrosion resistance of Ni, Cu, Armco iron and Kh18N9T stainless steel in molten AlF_3-NaF, KBr and KI melts at 800-900° C. (R6j, 2-61; Cu, Ni, Fe-b, ST)

776-R. (Translation-ConBur.) Thickness and Protective Action of Passive Fil Films on Tin. A. I. Levin, M. E. Prostakov and V. P. Kochergin. Journal of Applied Chemistry of the USSR, v. 33, Sept. 1960, p. 2069-2074.

Thickness of passive films formed on Sn in alkaline solutions containing sodium chromate is measured by optical polarization and expressed as a function of time and current density. 25 ref. (R10c, L14c, 3-67; Sn)

777-R. (Translation-ConBur.) Corrosion and Electrochemical Behavior of Stainless Steels Under Cathode Polarization in Nitric Acid Solutions. Communication 3. Effect of Steel Composition. E. N. Mirolyubov, M. M. Kurtepov and N. D. Tomashov. Academy of Sciences of the USSR, Bulletin, Division of Chemical Science, July 1960, p. 1098-1103.

Effects of various alloying elements on the corrosion resistance of stainless steels in 3% nitric acid solution. Measurement of corrosion rates and electrochemical behavior of steels containing different concentrations of Cr, Ni, Mo and Ti. 12 ref. (R6g, R1j, 2-60; SS)

778-R. (Translation-ConBur.) Corrosion and Electrochemical Behavior of Stainless Steels Under Cathode Polarization in Nitric Acid Solutions. Communication 2. Cathode Processes on Stainless Steels in Nitric Acid Solutions. E. N. Mirolyubov, M.M. Kurtepov and N. D. Tomashov. Academy of Sciences of the USSR, Bulletin, Division of Chemical Science, July 1960, p. 1092-1097.

Formation of nitrous acid during cathode polarization of stainless steels in nitric acid solution. Measurement of corrosion rates and activation potentials at varying concentrations. Determination of the relationship of the cathode current density on the steel to the rate of dissolution in nitrous acid. 17 ref. (R6g, R1j; SS)

779-R. High-Temperature Oxidation of Aluminium-Magnesium Alloys in Various Gaseous Atmospheres. R. A. Hine and

R. D. Guninski. Institute of Metals, Journal, v. 5, July 1961, p. 417-422.

Oxidation kinetics for Al-Mg specimens in CO_2, Ar, O and dry and undried air studied at 440-540° C. Investigation of oxide film composition, the nature of discolorations and the effects of annealing and of composition including small additions of Be on oxidation mechanisms. (R1h, 2-60, 2-64, 2-66; Al-b, Mg, Be)

780-R. Atmospheric Corrosion Behavior of Two Structural Aluminium Alloys (H10 and H15). E. A. G. Liddiard and J. A. Whittaker. Institute of Metals, Journal, v. 5, July 1961, p. 423-428.

Exposure tests of up to 8 yr. in industrial and marine atmospheres on test panels and weldments showing that the atmospheric corrosion rate of HE10 decreases with time exponentially and that after a variable incubation period, HE15 suffers rapid exfoliation (layer) corrosion which is linear with time. Investigation of corrosion mechanism and effects of protective anodic coatings in preventing both exfoliation and short transverse stress corrosion. 7 ref. (R3, 3-67; Al-b)

781-R. (English.) Electrochemical Techniques in Stress-Corrosion Cracking. T. P. Hoar. TVF (Teknisk-Vetenskaplig Forskning), v. 32, Mar. 1961, p. 93-103.

Electrochemical methods of investigating the mechanism of cracking include measurement of potential under controlled conditions, applied to Al and Ti alloys, stainless and other alloy steels and brass. 13 ref. (R1d, 1-54; Al-b, Ti-b, SS, AY)

782-R. Corrosion Inhibition of Aluminum-Zinc in Hydrochloric Acid Solution. K. G. Sheth and T. L. Rama Char. Corrosion Technology, v. 8, Aug. 1961, p. 233-234.

Inhibitive efficiencies of acridine, nicotinic acid, thiourea, strychnine and quinine hydrochloride on the corrosion of D. T. D. 687 aircraft Al-Zn alloy measured as a function of concentration weight loss and by polarization methods of effect of current density on cathode polarization and anode weight loss. 14 ref. (R10b, R10d)

783-R. Economic Aspects of Preventive Maintenance of Refinery Tanks. P. W. Sherwood. Corrosion Technology, v. 8, Aug. 1961, p. 235-238, 249.

Cathodic protection, painting and metal and plastic lining methods for corrosion prevention and various repair techniques as opposed to replacement for steel refining tanks are evaluated in terms of maximum protection efficiency and over-all costs. (R-general, R10d, L-general, T29s, 17-52, 17-53, 18-72; ST, 17-57)

784-R. Automatic Impressed-Current, Sacrificial and Combined Cathodic Protection Systems. Corrosion Technology, v. 8, Aug. 1961, p. 250-252.

Automatic, variable current flowing through sacrificial Pb anodes is used to prevent corrosion of steel hulls, rudders and propellers. Operating principles and equipment design are reviewed for Readermatic, Readermajor and Readerminor control systems. (R10d, T22; ST, Pb, 17-57)

785-R. Humidity and Temperature Effects on Atmospheric Corrosion Rates. R. Le Mar. Rock Island Arsenal Laboratory. U. S. Office of Technical Services, PB 171547, Feb. 1961, 17 p. $.50.

The effectiveness of controlled warehouse storage in protecting steel against corrosion can be increased by the addition of absorption beds and filters to the warehouse's humidity control units. Use of absorption beds of iron oxide in warehouses is recommended to remove contaminant gases which might prove corrosive to the stored items. Filtering techniques using electrostatic precipitation and centrifugal or washing methods are considered feasible for eliminating airborne particles which act as corrosive agents on metal surfaces. (R10g; ST)

786-R. The Use of Volatile Corrosion Inhibitors as a Preservative Medium for Long Term Storage of Ordnance Material. Addendum 7. Results After Ten Years of Exposure. R. E. Johnson. Rock Island Arsenal Laboratory. U.S. Office of Technical Services, PB 171516, Feb. 1961, 49 p.

Volatile inhibitors prove as effective as petrolatum type corrosion preventives in protecting gun and howitzer tubes and other sintered and nonferrous specimens of ordnance material from rust during a 10-yr. storage period. Use of these inhibitors to impregnate paper for

packaging gun and howitzer tubes for storage should provide savings in time and labor because, unlike the petrolatum type preventive, they require no degreasing after removal of the material from storage. (R10b, R10e, T2)

787-R. (Translation-ConBur.) Study of Pitting Corrosion of a Metal Under Stress by a Model Method. L. N. Tarasova, V. V. Romanov and N. I. Kudinova. Journal of Applied Chemistry of the USSR, v. 33, Oct. 1960, p. 2252-2257.

Effect of tensile stresses, degree of stress concentration and pit diameter on current direction and strength in specific corrosion couples made up of d-16 Al alloy and Cu wire. 7 ref. (R1a, R1d, R2j, 3-66; Al-b, Cu, 4-61, 7-59)

788-R. (Translation-ConBur.) Study of the Corrosion Cracking of 1Kh18N9 Steel in Chlorides in Presence of Organic Inhibitors. N. I. Podobaev and S. A. Balezin. Journal of Applied Chemistry of the USSR, v. 33, Oct. 1960, p. 2258-2266.

Corrosion testing of stainless steel specimens in $MgCl_2$ and $CaCl_2$ media at 153° C to determine the effect of inhibitor concentration on corrosion resistance and of polarization on the effectiveness of the inhibitor. 10 ref. (R10b, R6j, 9-72; SS)

789-R. (Translation-ConBur.) An Inhibitor of Pitting Corrosion. N. G. Chen. Journal of Applied Chemistry of the USSR, v. 33, Oct. 1960, p. 2267-2271.

Low-carbon steel specimens are tested in salt water solutions at room and boiling temperatures to determine the effectiveness of coke oven waste waters as local corrosion inhibitors. 6 ref. (R2j, R10b, R11j; CN-g)

790-R. (Translation-ConBur.) Use of Coke-Oven Waste Waters for Protection of Metals Against Corrosion. N. G. Chen. Journal of Applied Chemistry of the USSR, v. 33, Oct. 1960, p. 2272-2276.

Protective properties of coke oven waste waters in neutral, alkaline and acid mediums are studied by corrosion tests on medium and low-carbon steel specimens. (R10b; CN)

791-R. (Translation-ConBur.) Electrochemical Behavior of Steel in Concrete. V. S. Artamonov. Journal of Applied Chemistry of the USSR, v. 33, Oct. 1960, p. 2277-2284.

Study of the corrosion resistance of steel in concrete under a d-c. by determination of corrosion losses with gravimetric methods and electrochemical investigations. 5 ref. (R1j, R6q, P15g; ST, NM-f43)

792-R. (Translation-ConBur.) Study of the Rates of Dissolution of a Titanium Alloy in Sulphuric and Hydrochloric Acid Solutions of Various Concentrations. E. S. Bruile and N. S. Dambrovskaya. Journal of Applied Chemistry of the USSR, v. 33, Oct. 1960, p. 2327-2329.

Investigation of the corrosion rate of a Ti-5.7% Al alloy as a function of nature and concentration of the acid. 4 ref. (R6g; Ti-b, Al)

793-R. (Translation-ConBur.) Amine Salts of Certain Inorganic Acids as Inhibitors of Atmospheric Corrosion of Metals. S. A. Gintsberg and A. V. Shreider. Journal of Applied Chemistry of the USSR, v. 33, Oct. 1960, p. 2334-2337.

Corrosion test results for steel, Zn and Ni specimens protected by packing paper containing tungstate, molybdate, phosphate and tetraborate amine inhibitors. Specimens are exposed to air atmospheres at 40-20° C. and 92-94% humidity. 4 ref. (R10b, R10e, R3; ST, Zn, Ni)

794-R. High Temperature Aqueous Corrosion of Aluminum-Uranium and Aluminum-Silicon-Uranium Alloys. H. C. Bowen and R. L. Dillon. Corrosion, v. 17, July 1961, p. 9-11.

Tests in deionized water at 350° C. to predict corrosion behavior show no significant sample distortion when there are minor openings in the jackets. Al alloys containing less than 6% U are unsatisfactory but Al-Si alloys containing up to 6% U are satisfactory. Some as-cast Al-U alloys are preferable to Al-Si in terms of corrosion resistance. (R4, T11; 2-60, 2-62, 2-66; Al-b, U, Si)

795-R. High Temperature Aqueous Corrosion of Aluminum-Plutonium and Aluminum-Silicon-Plutonium Alloys. H. C. Bowen. Corrosion, v. 17, July 1961, p. 12.

Alloys are tested in deionized water at 350-360° C. in a static autoclave indicating that low percentage Al-Pu alloys have little resistance to corrosion

but that resistance increases as a function of increased Pu. Working of material drastically decreases resistance. Si additions make some alloys resistant to attack, for at least 24 hr., and also less sensitive to working. (R4, T11, 1-53, 2-60, 2-62, 2-66; Al-b, Pu, Si)

796-R. Corrosion Problems of Central Power Station Turbines and Condensers. A. Bayard Sisson. Corrosion, v. 17, July 1961, p. 18-24.

Seizing of turbine control and stop valves at temperatures over 900° F. due to corrosion of nitrided surfaces indicates use of morpholine to control alkalinity. Turbine blade failure, originally attributed to corrosion fatigue, is discovered to be the result of inadequate fatigue limit of the blade material and not sodium hydroxide carry over. Wastage of turbine blades is attributed to corrosion-erosion where steam and water both are present. Gases responsible for the accelerated attacks are oxygen, carbon dioxide and sulphur dioxide at low pH values. Stainless steel, Al and brass are evaluated for use in condenser tubes. (R1c, 2-64, 2-66, T7h; SS, Al, Cu-n)

797-R. Laboratory Tests Give Rapid Evaluation of Ship Bottom Coatings. J. R. Brown. Corrosion, v. 17, July 1961, p. 28-30.

Rapid evaluation, easy replication and controlled conditions are possible with lab tests but not on ship trials. Tests are conducted to study dry dock variables, wash primer for pretreatment and influence of coatings on pitting rate of protected steel. (R4, 1-53, R10f, T22g; ST)

798-R. Deep Well Ground Beds for Cathodic Protection of Multiple Lines in Highly Congested Industrial Areas. J. R. Gates. Corrosion, v. 17, July 1961, p. 75-76.

Deep-well type installation with high Si-Fe anodes and elaborate control system protects seven pipe lines in highly congested area where conventional ground beds cannot be used. (R10d, T26r)

799-R. Pitting Corrosion by Water Flood Brines. P. J. Raifsnider and A. Wachter. Corrosion, v. 17, July 1961, p. 77-80.

Testing reveals trace amounts of oxygen are responsible for pitting in closed system floods of secondary recovery operations in oil fields and indicates that the addition of an oxygen scavenger, such as sodium sulphite, prevents corrosion. (R4h, R10b; T29n)

800-R. Corrosion of Steels in Boiling Potassium Carbonate Saturated With Carbon Dioxide and Hydrogen Sulphide. D. Bienstock and J. H. Field. Corrosion, v. 17, July 1961, p. 89-91.

Solutions of potassium carbonate used in absorbing CO_2 and H_2S are corrosive to carbon steels and 410 stainless steel and less corrosive to 304 and 347 stainless and Monel. Presence of H_2S with CO_2 reduces the corrosiveness of the solution. (R6, 1-53, T29)

801-R. Stress-Corrosion Cracking--A Review of Current Status. W. Lee Williams. Corrosion, v. 17, July 1961, p. 92-96.

Classification of various modes of cracking including static and cyclic stresses, tensile and compressive stresses, electrochemical mechanisms, molten phase attack and hydrogen cracking. Electrochemical phenomena and metallurgical and chemical factors in cracking mechanism. (R1d, R11)

802-R. Corrosion of Metals in Tropical Environments. A. L. Alexander, C. R. Southwell and B. W. Forgeson. Corrosion, v. 17, July 1961, p. 97-104.

Eight-year exposure tests in Panama Canal Zone in various marine or freshwater environments to evaluate structural steels, phosphor bronze and naval brass. Tests on stainless steel galvanically coupled to carbon steel strips indicate applications of stainless steel for temperate climates and in tropical fresh water but not for sea water service. (R4a, R4b; 1-54; ST, Cu-b)

803-R. Effect of Mineral Impurities in Water on the Corrosion of Aluminum and Steel. Leonard C. Rowe and Monte S. Walker. Corrosion, v. 17, July 1961, p. 105-108.

Several common mineral constituents in water including chloride, sulphate, bicarbonate, carbonate, Ca, Mg and silicate do not affect Al. Chloride and sulphate are detrimental to

steel. Mixed solution containing soluble salts of Cu, chloride and bicarbonate accelerates corrosion rate of Al. Pitting depends upon impurity, concentration and temperature. (R4, 2-60, 2-61, 3-69; ST, Al)

804-R. Oxidation of Iron-Chromium Alloys at 750-1025C. D. Lai, R. J. Borg, M. J. Brabers, J. D. Mackenzie and C. E. Birchenall. Corrosion, v. 17, July 1961, p. 109-116.

Investigation of rate of oxidation of Fe alloys containing 0.2-10% Cr. Factors affecting corrosion rate include chrome concentrations, scale fracture, temperature and chemical equilibrium. (R1h, 2-60, 2-61, 2-66; Fe-b, Cr)

805-R. Pipe-Type Cable Corrosion Protection Practices in the Utilities Industry. Corrosion, v. 17, July 1961, p. 119-124.

Factors affecting high pressure oil and gas cables with coatings of asphalt mastic, epoxy, coal tar and asphalt enamel as functions of operating conditions, coating thickness and the type of reinforcing and shielding used. Wider use of resistor-rectifier method of cathodic protection during investigation period (1953-1958). (R10d, R10f, T26r)

806-R. Magnesium Anodes for the Cathodic Protection of Naval Vessels. L. J. Waldron and M. H. Peterson. Corrosion, v. 17, July 1961, p. 125-127.

Investigation of performance of magnesium anodes on destroyers indicates that if excess coated anodes are attached to those required for initial protection, a 3-yr. service life can be obtained by removing the coating from time to time, as indicated by potential measurements. (R4b, R10d, R10f, T22)

807-R. (English.) Crack Formation in Steel During Electrolytic Hydrogen Absorption. F. de Kazinczy. TVF (Teknisk-Vetenskaplig Forskning), v. 32, Mar. 1961, p. 159-162.

Effect of hydrogen and its electrolytic absorption and mechanical stress on blister and delayed fracture types of crack formation in Cr-Ni, Mn-Mo and chromium-aluminum-molybdenum steels, mild steel and mild steel with Ti is examined to establish a means of reducing blister cracks. 5 ref. (R1, R2n, 2-66, 3-66; CN, ST, Al, Cr, Mn, Mo, Ni, EG-n)

808-R. (English.) Stress Corrosion Cracking in Austenitic Stainless Steels. Apparatus for Testing in High Pressure Water of High Temperature. Gunnar Lindh. TVF (Teknisk-Vetenskaplig Forskning), v. 32, Mar. 1961, p. 152-158.

Examination of the susceptibility of 18-8 Type steels to stress corrosion cracking in extended contact with water in an atomic reactor. Details on experimentation apparatus and high pressure system. (R1d, T11, 2-62, 2-66, 3-74; SS)

809-R. (English.) Influence of the Chloride Ion Concentration on the Stress Corrosion of Stainless Steels at Different Temperatures. Stig Berg and Sture Henrikson. TVF (Teknisk-Vetenskaplig Forskning), v. 32, Mar. 1961, p. 145-151.

Determination of minimum chloride ion concentration required to cause corrosion and of the influence of composition and stress in the specimen, composition of corrosive medium and temperature. 4 ref. (R1d, 2-60, 2-61, 2-66, 3-66; SS)

810-R. Evaluation of Metal Alloys for Cladding the Fuel Elements in a High Temperature Nitrogen-Cooled Reactor. G. W. Titus and J. S. Brunhouse. American Nuclear Society, Transactions, v. 4, June 1961, p. 148.

Hastelloy-X, Inconel 702 and Inconel compared for structural stability, corrosion resistance and resistance to intergranular oxidation. A relatively low thermal and epithermal neutron absorption cross section is necessary. (R1, R11, T11, 2-62, 2-67, 17-57; Ni-b)

811-R. The 'New Look' in Pipeline Insulation. Chemical Processing, v. 24, Sept. 1961, p. 96-98.

Chemical plant pipes are given for chemical, fire and abrasion resistance by stainless steel jacketed calcium silicate insulation. (R10, T29m; SS, NM-a37)

812-R. Coating Systems for Steel at 250-1200° F. Gatewood Norman. Corrosion, v. 17, Sept. 1961, p. 12-20.

Tests of coatings suitable for steel process vessels, piping and equipment operating at 250-1200° F. Materials tested include silicones, Al-coated steel, Al sheathings, alkyds, Zn-rich organics, catalyzed epoxy, air-drying phenolics and inorganic zinc silicates. Influence of grit size in sandblasting for surface preparation. (R11, L-general, T29, 1-52, 2-61)

813-R. Laboratory Development of Corrosion Inhibiting Coatings for Mine Hoist Wire Rope. W. Dingley. Corrosion, v. 17, Sept. 1961, p. 22-28.

Testing of a asphalt-zinc chromate-trichlorethylene compound designed to protect Zn-coated and galvanized steel wire rope. Results indicate better protection against corrosion from moisture in mine environments. 4 ref. (R10, T7g; ST, 4-61, 8-61)

814-R. Corrosion Problems in a Sinter Plant Exhaust Gas System. R. J. Schmitt. Corrosion, v. 17, Sept. 1961, p. 425t-429t.

Corrosion caused by condensation of sulphurous, sulphuric and hydrochloric acids is minimized by maintenance of metal-surface temperature above acid dew points and by use of insulation and protective coating. 5 ref. (R10, 2-61)

815-R. Effect of Solution pH on the Mechanism of Stress Corrosion Cracking of a Martensitic Stainless Steel. H. J. Bhatt and E. H. Phelps. Corrosion, v. 17, Sept. 1961, p. 430t-434t.

Investigation of stress corrosion cracking of USS 12 MoV stainless steel in a 3% NaCl solution saturated with oxygen indicates that time to failure increases with increase in pH (3 to 11) but that cracking does not occur when pH is 11.5 or higher. Effect of anodic and cathodic polarization on cracking at different pH levels. (R1d, R10d, 2-66; SS-c)

816-R. Hydrogen Service Failures of Welds With Insufficient Alloy Content. R. W. Manuel. Corrosion, v. 17, Sept. 1961, p. 435t-436t.

Hydrogen damage is examined in a weld in the channel of a reactor charge-effluent exchange operating at 950° F. and hydrogen partial pressure of 375 psi. Weld failures due to low Cr and Mo content of steel weld alloy. (R7d, T29n, 2-60, 2-61, 3-74; ST, Cr, Mo, EG-n, 7-51)

817-R. High Temperature Scaling of Hafnium in Air. J. D. Gadd and E. B. Evans. Corrosion, v. 17, Sept. 1961, p. 441t-445t.

Hf is compared with Zr at 600-1200° C. to determine effect of scale cracking on scaling rate and the influence of nitrogen, in the presence of oxygen, on crystal structure and compositional change. 12 ref. (R2q, 2-61, 2-66; Hf, Zr)

818-R. Continuous Recording of Pipe-To-Soil Potential Vs. Distance. Robert L. Davis. Corrosion, v. 17, Sept. 1961, p. 446t-448t.

Equipment and procedure for continuous recording of pipe to soil and other potentials significant in cathodic protection of underground metallic structures. Process locates "hot spots" with accuracy, thus improving protection efficiency at these points. (R10d, R8)

819-R. Tentative Recommended Minimum Requirements for Hot Applied Wax-Type Protective Coatings and Wrappers for Underground Pipelines. Corrosion, v. 17, Sept. 1961, p. 449t-450t.

Composition, physical properties and test methods for primers, microcrystalline, shield and outerwrap coating. Processes for application and maintenance of coverings. (R10, T26r; 11-62)

820-R. Tentative Recommended Specifications and Practices for Prefabricated Plastic Films for Pipeline Coating. Corrosion, v. 17, Sept. 1961, p. 451t-452t.

Specifications and practices for prefabricated plastic films utilized for coating metal pipelines. Material considered include pressure-sensitive plastic tapes, plastic film with adhesive coating, tape laminates and extruded plastic coatings. Application, cleaning, priming, coating, wrapping, inspection and repair processes for films. (R10, T26r, 17-57; NM-d, 11-62)

821-R. (Italian.) Advantages and Disadvantages of Light Alloys. Giacomo Storace. Macchine, v. 16, Aug. 1961, p. 873-881.

Painting, plating, insulating and passivation of Al and Al alloys to prevent chemical and electrochemical corrosion. (R10; Al-b)

822-R. (English.) Sulphuration of Copper and Silver With Benzene Solutions of Sulphur. J. Llopis, J. M. Gamboa and L.

Arizmendi. Electrochimica Acta, v. 4, Aug. 1961, p. 294-305.

Type and rate of corrosion and nature of films formed during surface reactions. Relationship between kinetic law and time and experimental energy of activation. 26 ref. (R7g, P13a; Cu, Ag)

823-R. (Japanese.) On the Crack Length and the Low Temperature Brittleness of a Carbon Steel Subjected to Corrosion Fatigue. Kichiro Endo, Kin-ichi Nagai and Kenji Arizaki. Japan Society of Mechanical Engineers, Transactions, v. 27, July 1961, p. 1100-1106.

Study of cracks caused in smooth specimens by corrosion fatigue in saline solutions and of the effect of such fatigue on low temperature brittleness. Effect and relationship of cyclic rates, stress, notch effects, time and transition temperature. 6 ref. (R1e, R6k, Q26s; CN)

824-R. (French.) Temporary Corrosion Protection. Trempe, no. 39, Sept. 1961, p. 22-33.

Protection of metal parts by removable coatings and corrosion testing in a salt spray. Various coating substances are listed with the corresponding times, in months, for which they provide corrosion protection. (R10f, R11j)

825-R. (Italian.) The Behavior of Various Types of Aluminum in Continuous Immersion Tests in Presence of Fouling. E. Mor. Alluminio Nuova Metallurgia, v. 30, June 1961, p. 299-310.

Corrosion testing of Al, Aluman, Pe 25, Pe 50, Ac 11, Av 22 and Eg 55 alloys at the marine stations in Genoa harbor. The degree of corrosion, which is less in super purity Al, Aluman, Pe 25 and Pe 50 alloys, is increased in others by differential aeration. Effect of the pH variation on corrosion resistance. (R4b, 1-54, R11h, 2-60, 2-66; Al-b)

826-R. Prevention of Exfoliation Corrosion of an Aluminium Alloy (HE_{15}) by Extended Ageing. Winifred A. Bell and Hector S. Campbell. Institute of Metals, Journal, v. 89, Aug. 1961, p. 464-471.

Laboratory produced Al alloy extrusions containing 3·8 to 4·6% Cu and aged for various times between 165 and 200° C. are subjected to intermittent salt spray. Provided that the Cu content is not exceptionally low, exfoliation corrosion of this material can be practically eliminated by aging at 185° C. for 24 hr. Data are given for aging and composition effects on mechanical properties. (R2n, R11j, Q-general, 2-60, 2-65; Al-b)

827-R. (German.) Economical Importance of Corrosion and Corrosion Protection. Kurt Schwabe. Chemische Technik, v. 13, May 1961, p. 249-252.

Tabulation of financial losses incurred by corrosion of steel, Fe and nonferrous metals by various means throughout the world with a summary of the principle methods of corrosion protection. (R-general, R10, A4, 10-54)

828-R. (German.) Material Problems and Defects Caused by Corrosion in the VEB Leuna Werke "Walter Ulbricht". Georg Sille. Chemische Technik, v. 13, May 1961, p. 253-264.

Corrosion damage to plant equipment is micrographically examined and related to corrosion of unalloyed and heat resistant steels by gases including H, H_2O, CO, NH_3 and Cl and of austenitic alloyed steels by acid and alkaline solutions at elevated temperatures. (R3n, R6, 2-62; ST)

829-R. (German.) Corrosion Protection by Metallic Electrocoatings. W. Burkhardt. Chemische Technik, v. 13, May 1961, p. 265-268.

Review of corrosion mechanisms and means of corrosion protection of Fe and steel by electroplating with Zn, Ni, Sn, Pb, Cu and Ag duplex coating with Cr and Ni and coating with Zn-Ni alloys. (R-general, L17; ST, Fe, Zn, Ni, Sn, Pb, Cu, Ag, Cr)

830-R. (German.) Use of Radioactive Isotopes in Investigation of Corrosion Problems. Kurt Schwabe. Chemische Technik, v. 13, May 1961, p. 275-280.

Radioactive ions are used in the adsorption of anions on metal surfaces such as Fe, Ni and Pt. Investigation of surface heterogeneity; examination of efficiency of inhibitors; investigation of oxidation mechanism. 18 ref. (R-general, 1-59)

831-R. (German.) New Nonferrous Materials for Chemical Engineering. Martin May, Gunter Haussler, Wolfgang John and

Hans Sabath. Chemische Technik, v. 13, May 1961, p. 281-289.

Metals used for chemical apparatus include Ni alloys resistant to acid and alkaline liquids and gases, Ti and Ti alloys and Ta. Corrosion resistance is reviewed as a function of temperature and concentration of the corrosive media and of the mechanical and physical properties of the metal. (R6, P-general, Q-general, T29, 2-61, 2-66, 17-57; Ni-b, Ti-b, Ta)

832-R. (German.) Corrosion and Precipitation Processes on Heat Resistant Alloy Steels in Petrochemical and Oil Processing Engineering. Pt. 2. Paul Hermann Huppertz. Erdol und Kohle, v. 14, June 1961, p. 469-473.

Review of corrosion at elevated temperature of Cr-Ni steels (20-20, 20-15 and 25-12), caused by gases containing sulphur V_2O_5 or by corrosive welding slag; embrittlement at 475° C. of ferritic Cr steels; and sigma phase embrittlement of ferritic Cr steels or ferritic austenitic Cr-Ni steels at 500-900° C. (R-general, 2-60, 2-61, 2-66, 10-54; SS)

833-R. (Russian.) Corrosion Resistance of a Welded Apparatus for Reprocessing Naphtha. E. M. Kuzmak and N. N. Koshelev. Khimiya i Tekhnologiya Topliv i Masel, June 1961, p. 41-47.

Effect of composition, deformation and heat treatment on corrosion resistance and mechanical properties of manually and automatically welded 1KH18N9T steel weldments. 6 ref. (R7d, Q-general, 2-60, 2-64, 3-68; 7-51)

834-R. (German.) Materials in Chemical Apparatus Construction. W. Wiederholt. Chemische Industrie, v. 13, May 1961, p. 281-285.

Review of corrosion resistant metals such as alloy steel, Al, Ti and Ta; acid resistant metals such as bronze and other Cu alloys; metals resistant to melted alkaline solutions such as Ni and Co and their alloys. Metal and enamel coatings are considered as methods of increasing corrosion resistance. (R-general, T29, 17-57; ST, Al, Ti, Ta, Cu-b, Ni, Co)

835-R. (French.) Corrosion of Stainless Steels in Water at High Temperatures. Pouillard. Chemische Rundschau, v. 14, Aug. 1, 1961, p. 436-437.

Pitting and intercrystalline corrosion in technically pure water at 300-350° C. of 2 megohms per cm. resistivity containing less than 0.2 ppm. NaCl, up to 0.2 mg. per liter oxygen and having an acidity of 6-7 pH. (R2h, R2j, R4e, 2-61; SS)

836-R. (French.) Special Corrosion Studies. Hochmann. Chemische Rundschau, v. 14, Aug. 1, 1961, p. 437.

Immersion of a steel containing 0.03% C, less than 0.3% Si, 25% Cr, 20% Ni and 0.2% Cb in highly concentrated boiling nitric acid. Elimination of intercrystalline corrosion by keeping carbon content low and stabilizing with Cb. Passivating effect of 1% uranyl sulphate added to boiling H_2SO_4. (R6g, R2h, R10c, 2-60; AY)

837-R. (French.) Passivation of Stainless Steels. Guitton. Chemische Rundschau, v. 14, Aug. 1, 1961, p. 437.

Treatment with a mixture of hydrofluoric and nitric acid. Irradiation of the steel surface is assumed to have an activating effect similar to that of cold working. Effect of irradiation on water in contact with the steel. Formation of hydrogen and H_2O_2 during irradiation. (R10c, 2-67; SS)

838-R. (German.) Stainless and Acid Resistant Steels for Chemical Engineering--Properties and Applications. Helga Andersch. Chemische Technik, v. 13, June 1961, p. 339-346.

Chemical composition, microstructure and corrosion porperties of stainless and chemically inert ferritic, pearlitic-martensitic and austenitic alloy steels containing Ni and Cr. (R-general, M27, T29m; SS, AY, SGA-g, 17-57)

839-R. (English.) Local Corrosion of Stainless Steels in the Atmosphere. Masayoshi Tagaya and Tatsvichi Inaba. Osaka University, Technology Reports, v. 11, Mar. 1961, p. 129-135.

Microscopic and chemical analysis to determine the shape, number and distribution of pinholes at which corrosion occurs for commercial and vacuum melted stainless steels of types 302, 304, 304L, 316, 316L, 321, 347 and 430. (R3, 9-68; SS)

840-R. Developing Steels to Resist Hydrogen Sulfide. Eugene Herzog. IEC (Industrial and Engineering Chemistry), v. 53, Sept. 1961, p. 64A-67A.

Development of new alloys and especially a steel designated APS 10 M 4 which when quenched and tempered resists stress corrosion cracking by H_2S. Tensile tests are conducted in H_2S-saturated NaCl solution under 30-100 kg. per $mm.^2$ stress. Results of field tests conducted in a gas well. Theory of sulphide attack. 7 ref. (R1d, R6p, Q27, 3-66; AY)

841-R. (German.) Corrosion of Ferritic Steels in Lead-Bismuth Solutions of Eutectic Composition. Pavel Grobner and Vladimir Cikal. Archiv fur das Eisenhuttenwesen, v. 32, July 1961, p. 479-482.

Corrosion testing of Ti and Cb stabilized and nonstabilized steels in eutectic Pb-Bi melts at 400-750° C., with and without additions of 0.03% Ti, Zr, Cb and Ta, to the melt. Microscopic investigation of corrosion mechanism. (R6m, 2-60; ST)

842-R. Study on Stress Corrosion Cracking of Austenitic Stainless Steels. Pt. 2. Masaki Watanabe and Yoshihiko Mukai. Osaka University, Technology Reports, v. 11, Mar. 1961, p. 137-148.

The stress corrosion cracking of specimens under tensile stress and under residual stress due to welding is prevented by electrical contact with a less noble metal (Al, Fe, Cu). 5 ref. (R11s, 1-53, 3-66; SS-e, SGA-r)

843-R. Why Boilers Corrode. Jeffrey Jackson. New Scientist, v. 11, Aug. 10, 1961, p. 333-336.

Causes and methods of prevention of scaling and corrosion in water tube boilers. Prevention of scaling by chemical water softening and prevention of corrosion by mechanical or chemical deoxygenation. (R4c, 9-52, R10, T26q)

844-R. Theoretical Background to Practical Anti-Corrosive Paint Systems. T. G. Edwards. South African Industrial Chemist, v. 14, Nov. 1960, p. 211-215.

Mechanisms of corrosion of metals, especially steel, Fe, Al and Zn, by direct combination with O_2, direct chemical attack and electrochemical attack. Effects of surface preparation and of various films, pigments and surface coatings in combating each type of corrosion. Application of the galvanic series of metals and alloys to the solution of this problem. 14 ref. (R1, R10, L-general; Al, Fe-b, Zn)

845-R. (Translation-ConBur.) The Crevice Effect in Inhibition of Atmospheric Corrosion. A. V. Shreider and S. A. Gintsberg. Journal of Applied Chemistry of the USSR, v. 33, Nov. 1960, p. 2506-2511.

The use of volatile organic inhibitors to prevent atmospheric corrosion of U12 steel specimens is shown to be accompanied by increased crevice corrosion unless certain surface active substances such as various benzoates are added. 13 ref. (R3, 9-72, R10b; ST)

846-R. (Translation-ConBur.) Investigation of the Rate of Hydrogen Corrosion of Carbon Steel Pipes. Yu. I. Archakov. Journal of Applied Chemistry of the USSR, v. 33, Nov. 1960, p. 2512-2517.

Determination of the relationships between the degree of decarburization and pressure, time of action, wall thickness and internal pipe radius. Experiments are conducted at hydrogen pressures from 50-800 kg. per $cm.^2$ and 525° C. 9 ref. (R6q, 1-53, 2-61, 3-67, 3-73, 3-74; CN, 4-60)

847-R. (Translation-ConBur.) Derivation of a Formula for Calculation of the Depth of Decarburization. Yu. I. Archakov. Journal of Applied Chemistry of the USSR, v. 33, Nov. 1960, p. 2518-2521.

Derivation of a general kinetic equation representing the effects of temperature, pressure, time of exposure, wall thickness and internal pipe radius on the depth of decarburization in corrosion occurring in steel 20 pipes at high temperatures and high pressures of industrial hydrogen. (R6q, 2-61, 3-67, 3-73, 3-74; ST, 4-60)

848-R. (Translation-ConBur.) Variations of Solution pH in Corrosion of Carbon Steels in Sea Water. I. B. Ulanovskii. Journal of Applied Chemistry of the USSR, v. 33, Nov. 1960, p. 2522-2526.

Solution pH as affected by current density, polarization time, anode and cathode processes and ratio of solution volume to metal area. (R4b, 1-53; CN)

849-R. (Translation-ConBur.) The Effect of Metallic Ions on the Corrosion of Stainless Steel in Concentrated HNO_3 Solutions. M. M. Kurtepov and A. S. Gryaznova. Academy of Sciences of the USSR, Proceedings, Physical Chemistry Section, v. 135, Dec. 1960, p. 1129-1131.

Discussion of the effect of compounds containing metals of variable valency (Mn, Cr, Fe) on the rate of corrosion of stainless steel in boiling concentrated nitric acid solutions. 10 ref. (R6g, 2-66; SS)

850-R. (German.) Corrosion and Welding Tests on NiCrFe Alloys for Heat Exchangers. Heinz Anders. Kerntechnik, v. 3, June 1961, p. 279.

Corrosion testing of welded and nonwelded heat treated Inconel alloys with varying C and Cr content using 18/8 stainless steel as reference material, in autoclaves containing primary and secondary reactor water (pH-value 9.8-10.8) and in the gas phase adjacent to the secondary water. Evaluation of alloy weldments for application in reactor construction. (R4d, 2-60, 2-64, T11, W13b; Ni-b, Cr, Fe, 7-51, 17-57)

851-R. Oxidation of Tungsten. V. D. Barth and G. W. P. Rengstorff. Defense Metals Information Center, Battelle Memorial Institute, DMIC Report 155, July 17, 1961, 165 p.

Emphasis on high temperatures (700-1200° C.), pressure and water vapor as influencing oxidation and on high-temperature reactions of W with other materials and other gases. 186 ref. (R1, 2-62, 2-66, 3-74, 10-54; W)

852-R. Oxidation Resistance and Vacuum Hot Hardness of Refractory Tungsten Base Alloys Prepared by Arc Melting. A. A. Machonis. Paper from "Vacuum Metallurgy Conference, Transactions, 1960". Interscience Publishers, Inc., New York 1, 1961, p. 339-352.

Binary and ternary alloys of W, containing 1-40% Re, Ta or Cb, 1-48% Ti or 0.5-1% Ni, are prepared from sintered bars by arc melting in Ar atmospheres. Hot hardness is tested in vacuum by Rockwell indentation at 20-1600° C., with oxidation resistance determined in flowing air at 1200° C. for various times, as a function of composition. (R1h, Q29p, 1-73, C5h, 2-60, 2-62; W-b, Re, Ta, Cb, Ti, Ni)

853-R. (French.) Corrosion of Austenitic Steels by Nitric Acid in the Presence of Hexavalent Chromium. G. Plante. Bulletin de la Societe Francaise des Electriciens, v. 2, May 1961, p. 286-289.

Samples of low-carbon chromium-nickel steels are degreased, descaled and subjected to potential measurements in boiling HNO_3 of varying concentration. The addition of 1 g. per liter of potassium bichromate is studied as it affects corrosion behavior and microstructure. 7 ref. (R6g, 1-53, 2-60; SS-e)

854-R. (Italian.) Metal Corrosion at High Temperature Due to Vanadic Anhydride. Relation Between Accelerated Oxidation Resistance and Chemical Compositions of Alloys. A. Burdese. Metallurgia Italiana, v. 53, July 1961, p. 370-376.

Effect of small quantities of Mn, Mo, Cu, Be and Zr on resistance of refractory alloys and steels to accelerated oxidation. Examination of behavior of alloys and steels with regard to the formation of protective surface layers in the V_2O_5 vapor atmosphere. (R1h, 2-60; EG-d37, ST)

855-R. (English.) The Relation Between Microstructure and Stress Corrosion in Aluminum Alloys. B. Strom. TVF (Teknisk-Vetenskaplig Forskning), v. 32, Mar. 1961, p. 122-131.

Electrochemical phase potential, grain size, composition, heat treatment and stabilizers are considered as they affect electrochemical behavior. 11 ref. (R1d, M27, P15, 2-59, 2-60, 2-64, 2-66; Al-b)

856-R. Touch of Hand to Metal May Ruin Finish Coat. Industrial Finishing, v. 37, Sept. 1961, p. 99-100.

Acidic human perspiration attacks reactive metals (for example, Zn, Mg, Al, brass and Cu) and corrodes through coating. Preventive measures include providing gloves, or vapor degreasing and drying before application of finish coat. (R7p, R10g, L12; Zn, Mg, Al, Cu-b)

857-R. Growth Rate of Oxide Films on Copper. Technical News Bulletin (National Bureau of Standards), v. 45, Aug. 1961, p. 134-135.

Thickness of oxide films is measured as they increased on four different crystallographic planes of Cu single crystals immersed in oxygenated water. (R1h; Cu, 14-61)

858-R. (English.) The Metal Physics of Stress Corrosion. A. J. Forty. TVF (Teknisk-Vetenskaplig Forskning), v. 32, Mar. 1961, p. 109-121.

Analysis of stress corrosion of single crystals of alpha brass, Cu-Au alloy and stainless steel with particular consideration of transgranular failure. Effect of corrosion and mechanical properties and chemical dezincification on crack initiation and propagation. 27 ref. (R1d, M26; SS, Cu-b, 14-61)

859-R. (English.) Stress Corrosion in Brass Against the Background of Potential/pH Diagrams for the Corroding System. Einar Mattsson. TVF (Teknisk-Vetenskaplig Forskning), v. 32, Mar. 1961, p. 132-138.

Measuring the influence of pH and redox potential on the electrochemical behavior and corrosion of brass using the potential/pH diagram. Properties affected and studied include surface coating, time to cracking and nature of cracks. 9 ref. (R1d, 2-66; Cu-n)

860-R. First International Congress on Metal Corrosion. T. L. Rama Char. Journal of Scientific & Industrial Research, v. 20A, July 1961, p. 348-350.

Summary of papers presented on inhibitors, fundamental studies, cathodic protection, practical experience, high temperature oxidation and paint protection. Materials include Cb, Pt, Sn, Zn, Al, Mn, Al-Mg and Al, ferrous, Ni and Ni-Cr, Zr, Fe-C and Fe-Si alloys and mild, stainless and Cr-Ni-Mn steels. (R-general, R10, L26, 10-54)

861-R. Some Contributions of Soviet Scientists to the Science of Corrosion and Its Prevention. I. P. Anoshchenko. Journal of Scientific and Industrial Research, v. 20A, July 1961, p. 359-365.

Subjects include the theory of homogeneous dissolution of metals, theory of local cells, research on inhibitors, null-point of metals, seawater corrosion and electroplating. 77 ref. (R-general, L17, 10-54)

862-R. The Effect of Environment on Embrittlement in Metals. E. A. G. Liddiard. Paper from "Toughness and Brittleness in Metals". Institution of Metallurgists, London, S. W. 1., by Iliffe Books Ltd., London S. E. 1., England, 1961, p. 41-63.

Factors causing metal fracture without significant deformation include temperature, gaseous diffusion, hydrogen, delayed fracture, coating cracks, corrosion and corrosion products, rock salt, water, surface tension and others. Control of metal surface environment to prevent brittle fracture. 18 ref. (R-general, R10a, Q26s)

863-R. (Translation-ConBur.) Mechanism of the Protective Action of Sodium Arsenate in Acid Media. V. A. Khitrov and N. A. Dugin. Journal of Applied Chemistry of the USSR, v. 33, Dec. 1960, p. 2673-2676.

The surface of low-carbon steel after treatment in 1 and 7N H_2SO_4 and HCl solutions containing 1% sodium arsenate at 0-80° C. is investigated by X-ray and electron diffraction methods to determine the nature of the protective film. Anodic and cathodic polarization curves are given. (R10b, R6g, M28m; CN-g)

864-R. (Tranlation-ConBur.) Effect of Chlorine on Corrosion of Titanium by Hydrochloric Acid. Kh. L. Tseitlin and V. A. Strunkin. Journal of Applied Chemistry of the USSR, v. 33, Dec. 1960, p. 2768-2770.

Corrosion resistance of Ti sheet containing small amounts of C, Ni, Fe, Al, Si and N at 60-90° C. in HCl continuously saturated with Cl_2. 11 ref. (R6g, 2-60; Ti-b, 4-53)

865-R. Refinery Beats Graphitic Corrosion With Ni-Resist Iron. Inco Nickel Topics, v. 14, no. 7, 1961, p. 1, 3.

Parts resisting accumulation of layers of graphite are indicated for desalting water and the handling of hydrochloric and sulphuric acids, caustic soda, organic acids and sulphur compounds. (R2p, R6, R7, T29n; Fe, Ni)

866-R. (Russian.) Corrosive Destruction of Heated Iron by Fast Flowing Cold Air. V. I. Prosvirin and L. Ya. Nesgovorov. Doklady Akademii Nauk SSSR, v. 138, Mar. 1961, p. 628-630.

Corrosive and erosive interaction is determined at various temperatures (800-1000° C.) and air speeds. 8 ref. (R1h, 1-53, 2-61; Fe)

867-R. An Investigation Into the Causes of Intercrystalline Corrosion in Zinc-Aluminium Alloys. C. W. Roberts. Metallurgia, v. 64, Aug. 1961, p. 57-66.

Study of the intercrystalline attack occurring in high-purity Zn-Al alloys and the action of impurity or alloying elements in accelerating or retarding corrosion. Susceptibility to this form of attack in the presence of moisture is substantially counteracted by the addition of Mg provided that the concentrations of impurities present are below the limits closely defined in the British Standard specification for commercial alloys. (R2h, 2-60; Zn-b, Al, Mg)

868-R. Corrosion Resistance of Aluminum Alloy 5083 in Marine Environments. W. H. Ailor and R. I. Lindberg. American Society of Naval Engineers Inc., Journal, v. 73, Aug. 1961, p. 545-547.

Welded and bare specimens are exposed to marine environment at full submersion, half tide submersion and in atmosphere showing a maximum of 3 mils of corrosion on one sample. (R3p, R4b, 1-54; Al-b, 7-51)

869-R. (Russian.) Oxidation of Some Metals With Low Melting Point. R. F. Voitovich. Izvestiya Akademii Nauk SSSR--Metallurgiya i Toplivo, Mar. 1961, p. 90-95.

Study of Mg, Zn, Cd, Ca, Sr, Pb, Sn, Bi, La and Ce at 20-500° C. to determine the effect of temperature on the intensity of scale formation. 6 ref. (R1h, 2-61; SGA-d)

870-R. An Electrometric and Electron Diffraction Study of Air-Formed Oxide Films on Iron. P. B. Sewell, C. D. Stockbridge and M. Cohen. Electrochemical Society, Journal, v. 108, Oct. 1961, p. 933-941.

Oxide films formed at 20-200° C. on Fe single crystals and polycrystals are investigated by electron diffraction and electrochemical methods. The structure of the oxide varies from an Fe_3O_4 type at the metal/oxide interface to a gamma Fe_2O_3 type material at the oxide/gas interface as a function of the crystallographic orientation of the Fe substrate, the mode of formation and the time of subsequent air exposure. 14 ref. (R1h, M-general, P15; Fe)

871-R. The Formation of Porous Oxides on Metals. Pt. 2. Tungsten and the Parabolinear Rate Law. W. B. Jepson and D. W. Aylmore. Electrochemical Society, Journal, v. 108, Oct. 1961, p. 942-947.

The mechanism of paralinear oxidation, in which an inner, compact layer of oxide forms at a parabolic rate and transforms to an outer, porous layer at a linear rate, is tested for samples oxidized at 750 and 800° C. for increasing times with the amount of porous oxide present being examined by the method of Ky sorption and by metallography. The rate of formation is not constant but decreases with time to reach an almost constant value. 22 ref. (R1h, 3-67, M-general; W)

872-R. Effect of Reynolds Number on Corrosion of Copper by Sulphuric Acid. I. Cornet, E. A. Barrington and G. U. Behrsing. Electrochemical Society, Journal, v. 108, Oct. 1961, p. 947-953.

Corrosion of electrolytic tough-pitch Cu pipe in aerated 2.1N sulphuric acid at 30° C. in a closed loop circulating system with 1 in., 3/4 in. and 1/2 in. diameter test sections. There is a gradual increase of corrosion rate with increasing Reynolds number in the laminar flow regime; a rapid increase in corrosion rate with increasing Reynolds number in the low turbulent flow regime and a relatively constant corrosion rate due to polarization at Reynolds number less than 10^4. 43 ref. (R6g, 3-67; Cu, 4-60)

873-R. The Role of a Displacement Reaction in the Kinetics of Oxidation of Alloys. Roger L. Levin and J. Bruce Wagner, Jr. Electrochemical Society, Journal, v. 108, Oct. 1961, p. 954-959.

The oxidation of some 70-95% Cu-Zn and a 68% Cu-Ni alloy in pure oxygen at 700° C. is studied to determine the occurrence of a displacement reaction as proposed by C. Wagner. The reaction is observed through a change in the oxide scale by metallographic examination and by noting a change in the rate of oxidation as given by the parabolic reaction rate constant. 15 ref. (R1h, 3-67; Cu-b, Ni, Zn)

874-R. Extending Storage Tank Life. C. K. Aldrich. New Zealand Engineering, v. 16, Aug. 15, 1961, p. 297-298.

Design considerations for eliminating corrosive conditions in storage tanks of Al and Cu alloys, stainless and mild steel,

Monel, Inconel and Ti. Use of stress relieving heat treatment to prevent cracking. (R10, T26q; Al-b, Cu-b, Ni-b, ST, SGA-g, 17-57)

875-R. Inhibition of the Corrosion of Steel Embedded in Mortar. M. G. Arber and H. E. Vivian. Australian Journal of Applied Science, v. 12, Sept. 1961, p. 339-347.

Corrosion by inorganic admixture salts is investigated in mild steel mortars containing $SnCl_2$, $CaCl_2$, $Na_2S_2O_3$, $NaNO_3$, NaH_2PO4 and $NH_4H_2PO_4$, as a function of mortar composition and curing treatment. (R6g, R6j, R10b; CN)

876-R. Corrosion Mechanisms (The Effect of pH on the Corrosion of Steel at 316° C.) W. A. Fraser and M. C. Bloom. Report of NRL (Naval Research Laboratory) Progress, Aug. 1961, p. 27-28. (Available as PB171321 from U. S. Office of Technical Services, Washington 25, D. C.) $1.25.

The corrosion rate of mild steel at 316° C. in solutions containing 0.4-0.7 g per l. of NaOH is determined by the hydrogen effusion method. The corrosion mechanism involves at least two pH effects, one of which disappears with time. (R6j, R10a, 3-67; CN)

877-R. Corrosion Resistance of Chromium. T. P. Hoar. Platinum Metals Review, v. 5, Oct. 1961, p. 141-143.

Effects of additions of small percentages of Pt, Pd or other noble metals on corrosion of Cr in nonoxidizing acids. Passivation mechanisms and dissolution rate data given for specimens containing 0.5% Ir, Rh, Ru, Os, Au, Re or Ag, 2% Cu, 0.1-5.0% Pt and 0.5-1.0% Pd in boiling H_2SO_4 (10% to concentration), HCl (5-15%) and HNO_3 (65%). 4 ref. (R6g, R10b, 2-60; Cr, EG-c)

878-R. (German.) Effect of Alkali-Hydroxide Melts on Various Noble Metals and Oxides. Hermann Lux, Erich Penauer and Erhard Betz. Zeitschrift fur Anorganische und AllgemeineChemie, v. 310, July 1961, p. 305-319.

Investigation of corrosion resistance of metals and oxides to KOH and NaOH melts at 200-400° C., as influenced by partial pressure of H_2O. Materials include Au, Ag, Rh, Ir, PtRh alloy, Co and Al_2O_3, ZrO_2, HfO_2 and ThO_2. (R-general, 1-54)

879-R. The Comparative Roles of Oxygen and Inhibitors in the Passivation of Iron. Pt. 4. Osmium (VIII) Oxide. G. H. Cartledge. Journal of Physical Chemistry, v. 65, Aug. 1961, p. 1361-1367.

Galvanostatic cathodic polarization is observed in the oxygenated solution. Passive corrosion current density is measured. Osmium oxide is reduced to Os $(OH)_4$ by deposition. 28 ref. (R10c, 1-54; Fe)

880-R. (German.) Zirconium and Its Use. F. Sperner. Metall, v. 15, Sept. 1961, p. 892-894.

Corrosion resistance of Zr to liquid chemicals at elevated and room temperature. Applications of corrosion resistant Zr alloys such as Zircaloy, in nuclear reactor technology, chemical apparatus construction and electronic engineering. (R6, R7, 2-61; Zr-b, 17-57)

881-R. (German.) Influence of Small Amounts of Titanium and Boron on Properties of Oxide Layers Formed on Aluminum Surfaces. A. Domony. Metall, v. 15, Sept. 1961, p. 900-901.

Influence of small amounts of boron on composition and structure of oxide layers of Al melts and continuously cast Al ingots. Results of alloying with small amounts of Ti. (R1h, 2-60; Al, 5, B, Ti)

882-R. (German.) Corrosion of Zirconium and Its Alloys in Hot Water and Steam. H. W. Schleicher. Metalloberflache, v. 15, Aug. 1961, p. 234-240.

Corrosion testing of pure Zr and Zr alloys with Sn including Zircaloy 2 and 3 and with Ta (0.5%), Cb (1%), Ni, Fe and Pd in pure water and steam at temperatures from 250-500° C. and pressures of 100-300 atm. Kinetics and mechanism of corrosion. (R4d, R4e, 1-66, 2-61, 3-67; Zr-b, Cb, Fe, Ni, Pd, Sn)

883-R. (German.) Investigation of Oxidation of Copper-Beryllium Alloys at Elevated Temperatures. Fritz Maak. Zeitschrift fur Metallkunde, v. 52, Aug. 1961, p. 538-545.

Oxidation of pure Cu sheets at 750-1050° C. and of Cu-Be alloy sheets containing 0.77-12.6 at.% Be at 850° C. by air. Continuous measurement of oxidation rate by suspension of specimens on a balance and investigation of oxide structure and oxidation mechanism by microscopic investigation. (R1h, 1-54, 2-62; Cu, Be)

884-R. (German.) Evaluation of Film Thickness Measurements on Binary Alloys With Internal Oxidation and Simultaneous External Oxidation. Fritz Maak. Zeitschrift fur Metallkunde, v. 52, Aug. 1961, p. 545-546.

Computation of oxygen solubility as a function of diffusion in a binary Cu-Be alloy (0.77-6.6 at.% Be) oxidized at 850° C. by microscopic measurement of zone of internal oxidation. (R1h, R2s, P12, 1-54; Cu, Be)

885-R. Corrosion Resistance of Titanium, Zirconium and Tantalum Used for Chemical Equipment. Clifford A. Hampel. Corrosion, v. 17, Oct. 1961, p. 9-10, 12, 14, 16-17.

Chemical resistance, mechanical and physical properties of Ti, Zr and Ta for use in corrosive environments are reviewed with particular reference to ductility, strength, fabricability and weldability. Relation of hydrogen absorption properties and resistance to numerous corrosives at varying temperatures are related in the text and tabulated data. 13 ref. (R-general, P-general, Q-general, T29; Ta, Ti, Zr, 17-57)

886-R. Corrosion Damage on Automobile Exhaust Systems. Corrosion, v. 17, Oct. 1961, p. 18, 20-24, 26-29.

Effect of acid condensates from engine fuel combustion, operating temperatures and weathering conditions, exhaust system design and component composition on automobile exhaust systems of aluminized, Zn-coated, Cr-rich diffusion coated and stainless steels. Use of phosphate oil solution for rust inhibition. 20 ref. (R7g, R7b, T21c; ST, 8, 17-57)

887-R. Polyester and Epoxy Based Non-Solvent Coatings for Corrosion Control. William C. Hodges and John J. Bogner. Corrosion, v. 17, Oct. 1961, p. 34-36, 38, 40, 42.

Chemical resistance, composition, physical and mechanical properties and polymerization mechanics of coatings with reactive resins for bases which give greater films thicknesses and impermeability in one application than do conventional coatings. Survey of spraying equipment and application procedure. Comparison with solvent-type coatings for shrinkage, thermal expansion, resistance to erosion and corrosion, cold flow and stability. Examples are given for application to steel. (R-general, L26p; NM-g33)

888-R. Premature Failure of Copper-Nickel Alloys in Sea Water. H. E. Stover. Corrosion, v. 17, Oct. 1961, p. 461t-462t.

Monel and 90/10 Cu-Ni bands normally having long service life when used to tie plastics around pilings fail after 1-yr. exposures in salt water. The corrosion seems greatest near the mudline, the black material on both metals being a mixture of sulphides and alloyed metals and with the strips being somewhat magnetic. Several possible theories are advanced to explain the failures. (R4b, 3-67; Cu-b, Ni-b)

889-R. Galvanic Anodes and Fresh Water Rinse Reduce Tanker Corrosion. E. E. Nelson. Corrosion, v. 17, Oct. 1961, p. 463t-468t.

Types of tanker corrosion are classified under operating conditions including the presence or absence of ballast water and petroleum material cargoes of low or high viscosity. Pitting is explained as simple galvanic corrosion with data analyzed for cathodic protection systems using Al, Mg and Zn anodes. Appreciable H is generated by Mg systems but not by Zn systems. 20 ref. (R1a, R7a, R10d, T22, T26q; Zn, Mg, 17-57)

890-R. Corrosion Problems Encountered in a Nickel Refinery Ammonia Absorption System. R. B. McIntosh. Corrosion, v. 17, Oct. 1961, p. 469t-474t.

Corrosion of carbon and stainless steel piping and chemical processing equipment encountered in a nickel refinery, ammonia recovery circuit resulting from entrainment and carbon dioxide in leach gases. Slurry picked up by the gas leaving the autoclave settles out when the gas velocity decreases sufficiently near the cooler outlet creating ideal conditions for corrosion attack. Corrosive cooling water is also a factor. 5 ref. (R4c, R6p, T29m; ST, 17-57)

891-R. Evaluation of Tantalum, Molybdenum and Beryllium for Liquid Bismuth Service. J. W. Seifert and A. L. Lowe, Jr. Corrosion, v. 17, Oct. 1961, p. 475t-478t.

Tilting capsule and dynamic loop tests determination of the suitability of Ta, Mo and Be for the containment of liquid Bi in a liquid metal fuel reactor. All the materials tested had adequate corrosion resistance at 750 and 975° F. The corrosion resistance of Ta appears to be related to the surface finish and increasing velocity seems to adversely affect the corrosion resistance of Mo + 0.5 Ti. 10 ref. (R6m, 2-62, 3-67; Ta, Mo-b, Be, Bi)

892-R. Effect of Nitrogen Tetroxide on Metals and Plastics. C. W. Alley, A. W. Hayford and H. F. Scott, Jr. Corrosion, v. 17, Oct. 1961, p. 479t-484t.

The corrosion rates of A-285 carbon steel, 304-L and PH 15-7 Mo stainless steels, 5086 Al, 75 A and 6Al-4V Ti, polytetrafluorethylene, polychlorotrifluoroethylene, nylon and a number of elastomers are determined in dry and wet liquid N_2O_4 under static and dynamic exposure conditions at -9 to 74° C. (R6p)

893-R. Stress Corrosion Cracking of Admiralty Exchanger Tubes in Reformer Service. K. R. Walston. Corrosion, v. 17, Oct. 1961, p. 114.

Metallurgical examinations, chemical analysis and hydrostatic tests are used to determine cause for stress corrosion cracking occurring unexpectedly on admiralty tubes removed from a reactor effluent cooler. Strong ammonia concentrations gathered during downtime, ammonia being liberated when ammonium chloride came in contact with brass causing the cracking. A contributing factor was the lack of offsetting inhibition resulting from low sulphur content in the stream. (R1d, R6p, T29; Cu-n, 17-57)

894-R. A New Test for Estimating Soil Corrosivity Based on Investigation of Metal Highway Culverts. R. F. Stratfull. Corrosion, v. 17, Oct. 1961, p. 493t-496t.

Corrosion rates of several thousand steel highway culverts buried in California soils are studied with respect to soil resistivity and pH, a new test method being derived from this relationship for estimating soil corrosivity. Statistical analysis is used to compare the accuracy of the method with standard techniques such as the Dension Cell method. 19 ref. (R8, R11a, T26r; ST, 17-57)

895-R. Cavitation Erosion of Structural Materials and Coatings. J. A. Lichtman, K. H. Kallas, C. K. Chatten and E. P. Cochran, Jr. Corrosion, v. 17, Oct. 1961, p. 497t-505t.

Monel, Stellite, stainless and mild steels, bronzes, brass and Al alloys, structural plastics and ceramic, glass, metallic, elastomeric, plastic and silicate coatings are tested with a rotating disk cavitation apparatus. Relationships are studied between cavitation erosion resistance and physical and mechanical properties. 16 ref. (R1c, R2m, Q-general; ST, Cu-b, Ni-b, Al-b, NM-d, NM-g34)

896-R. Corrosion Mechanisms (Protective Spinel Films on Steel--Their Stabilization to Deterioration on Room Temperature Exposure to Aqueous Media). M. Krulfeld and M. C. Bloom. Report of NRL (Naval Research Laboratory) Progress, Sept. 1961, p. 46-48. (Available as PB 171322 from U. S. Office of Technical Services, Washington 25, D. C.) $1.25.

Effect of time of 600° F. exposure, concentration of Li in the aqueous solution, change of the anion present with the Li and use of another alkali cation (K) rather than Li in the solution on the breakdown of protective spinel film and corrosion rate of mild steel in boiler waters. Electron microscopy study of films formed in KOH solution and tested in air saturated and distilled water. (R1h, R4c, 2-61, 2-62, 3-67; CN)

897-R. Corrosion Problems and Their Treatment. Corrosion Prevention & Control, v. 8, Sept. 1961, p. 1-4.

Review of methods of corrosion protection in various applications in water, soil and atmosphere, with special reference to the role of the corrosion engineer. (R10, L-general, 10-54)

898-R. Corrosion Protection for Farm Machinery. R. B. Chandler. Corrosion Protection & Control, v. 8, Sept. 1961, p. 33-35, 41.

Coatings and primers used on farm equipment include phosphoric acid for surface cleaning, red oxide and ZnCr primer. Hot spraying and air drying is used along with flow coating and electrostatic spraying. Alkyl resins and epoxy esters are evaluated. (R-general, L-general, 1-52)

899-R. Erosion Effects of Water Droplets. Corrosion Prevention & Control, v. 8, Sept. 1961, p. 36, 44.

Water drop erosion and the effects of water under controlled conditions of speed and force are studied to establish a basis for choosing materials for use in turbines. Materials studied include copper, stainless steel, Stellite and tungsten carbide. (R1c, 1-54; SS, Cu, Co-b, 14-68)

900-R. (Italian.) Behavior of Riveted Aluminum and Aluminum Alloy Plates in City, Industrial and Marine Atmospheres. G. Luft. Alluminio, v. 30, Sept. 1961, p. 401-424.

Tests on Al, AG25, AG35, AM12, ASO4GTA16 and AZ45 Al alloys indicate that mechanical characteristics are affected by marine, urban and industrial atmospheres, in that order. The behavior of anodized materials is also investigated. (R3, 1-54; Al, Al-b)

901-R. Compatibility, With Aluminum, of a Number of Chemicals Used in the Aerosol Industry. F. M. Languedoc and R. M. Howe. 47th Mid-Year Meeting of the Chemical Specialties Manufacturers Assoc., Inc., Proceedings, May 1961, p. 45-49.

Staining, pitting, etching and non-localized evidence of corrosion attack are studied in Al cups, valves and cans used to store aerosol formulations for 7-200 days at 100° F. (R-general, T10g, 1-54; Al)

902-R. The Effect of Mineral Impurities in Water on the Corrosion of Aluminum and Steel. Leonard C. Rowe and Monte S. Walker. 47th Mid-Year Meeting of the Chemical Specialties Manufactures Assoc., Inc., Proceedings, May 1961, p. 77-81.

Comparison of the corrosion rates of alloy strips of SAE 1020 carbon steel and 1145 H aluminum in water at 26° C. The effect of mineral impurities (SO_4, Cl, HCO_3, CO_3, Ca, Mg and silicate) on the corrosion and pitting of steel and Al. The effect of temperature (26-71°C.) on the corrosion of Al at various bicarbonate concentrations. A study is made on protection offered by silicone oil, n-heptane and borax. 10 ref. (R4, 2-61, 3-69; CN, Al)

903-R. Corrosion of Molybdenum-Bearing Austenitic Stainless Steels and Other Alloys in Tall Oil Distillation. Harold C. Templeton. Tappi (Technical Assoc. of the Pulp and Paper Industry), v. 44, Oct. 1961, p. 702-707.

Test data with reference to limits of usability of various Mo steels and alloys including 304, 310, 317, CF8, 316, CF-8M, CG-8M, Alloy 20, Nionel, Inconel, Monel, Hastelloy B, C and F, CH 10 (25-12), 25-10 Mo (cast), Reg. Incoloy, Incoloy 901 and 804, 2S Al, RC70-Ti and U.S.S. Corex. (R7, 17-57; SS-d, Ni-b, Al, Mo)

904-R. (German.) Internal Corrosion of Oil Tanks of Thin Steel Sheets and Its Prevention. Hans Stoffels. Technische Uberwachung, v. 2, Sept. 1961, p. 342-345.

Pitting is investigated by corrosion tests of dented oxidized and bright sheet specimens of unalloyed steel (0.04% C) in oil with a drop of sea water in the dent. Means of protection include removal of water from oil and surface treatment of steel, as by lacquering and cathodic coating. (R2j, R10d, L26n, 1-54; ST, 4-53)

905-R. Microscope Speeds Diognosis of Refinery Corrosion. Harry M. Wilten. Hydrocarbon Processing & Petroleum Refiner, v. 40, Oct. 1961, p. 151-158.

Cavitation, pitting, caustic cracking, caustic embrittlement, intergranular corrosion, stress corrosion, chloride cracking, corrosion fatigue and hydrogen attack on 18-8 stainless steel, mild steel brass admiralty metal and Cr, Ni and Al alloys. (R7g, R2, T29n; ST, Cu-n, Al-b, Cr-b, Ni-b)

906-R. (Japanese.) Corrosion Resistance of Commercially Pure Zirconium in Some Media. Shujiro Suzuki. Sumitomo Light Metal Technical Reports, v. 2, July 1961, p. 198-204.

Corrosion testing of plate specimens in HCl, H_2SO_4, HNO_3, H_3PO_4, H_2O_2, $(COOH)_2$, NAOH and SO_2 solutions of varying concentrations at 4-164° C. for varying times. Effect of acid concentration, time and temperature on surface appearance and corrosion weight loss. 6 ref. (R6, 2-61, 3-67; Zr, 4-53)

907-R. (French.) The Presence of Dispersed Hematite in the Magnetite Phase of Oxide Whiskers of Iron at Elevated Temperatures. J. Paidassi. Acta Metallurgica, v. 9, Oct. 1961, p. 961-963.

Metallographic examination of Fe_2O_3 needles precipitated in Fe_3O_4 whiskers formed during oxidation of Puron and

Armco iron specimens by heating at 400-1200° C. and cooling in air and water vapor. A mechanism is proposed for the reaction in terms of oxygen supersaturation and penetration into grain boundary cracks in the magnetite. 5 ref. (R1h, M-general, N7, 2-61; Fe-a)

908-R. Thermal History From Corrosion Product. P. K. Foster. Iron and Steel Institute, Journal, v. 199, Sept. 1961, p. 18-21.

X-ray diffraction analyses of scale from a failed boiler showing that part of the furnace tube was heated above 570° C. not more than 16 hr. before failure. The techniques used offer a nondestructive method of detecting prior heating of steel above 570° C. in oxidizing media and in certain cases of establishing roughly the date of overheating. 6 ref. (R1h, T26q, M22g, 2-62; ST, 17-57)

909-R. (Russian.) Effect of Ionizing Radiation on Corrosion Behavior of Metals in CCl_4. A. V. Byalobzheskii and V. N. Lukinskaya. Atomnaya Energiya, v. 11, Feb. 1961, p. 170-176.

Investigation of corrosion properties of Ti, Al, Zr, Cu, Monel, ST-3 alloy and two stainless steels in irradiated CCl_4. Corrosion and Cl formation are affected by radiation, time, moisture content of the air and CCl_4 and type of atmosphere. 14 ref. (R6p, 2-67, 3-67; ST, Al, Zr, Cu, Ni-b)

910-R. Growth Rate of Oxide Films on Copper. Products Finishing, v. 26, Nov. 1961, p. 98-106.

Study of the formation of oxide films on Cu during corrosion process by measuring film thickness on Cu single crystals immersed in oxygenated water, indicating that the type of oxide formed, its growth rate and thermodynamic stability are influenced by oxygen concentration. (R1h; Cu)

911-R. Effect of Dodecyl Alcohol on Fatigue Crack Propagation. Technical News Bulletin (National Bureau of Standards), v. 45, Oct. 1961, p. 178-179.

Tests are conducted with sharply notched cylindrical specimens of steel, Al, Cu and Be alloys both clean and coated with dodecyl alcohol. Results indicate that the use of alcohol may significantly reduce the rate of fatigue crack propagation due to the fact that the polar compound forms a film on the metal which prevents a corrosive reaction between the metal and the atmosphere. (R1e, L10b, 1-54, 17-57; ST, Al-b, Be-b, Cu-b, NM-b)

912-R. (French.) Atmospheric Corrosion of Chromium Plated Aluminum. Galvano, v. 30, Sept. 1961, p. 577-582.

Corrosion testing in salt water mist and semirural and industrial atmospheres of specimens coated with Cr by various processes including duplex plating with Cu or Ni and coating by the Vogt process. Effect of priming deposits on corrosion resistance. (R3, L17; Al, Cr, 8-62)

913-R. Increasing the Corrosion Resistance of Plated Parts. Digest of "A Progress Report on Experiences in Improving Corrosion Resistance of Automobile Parts". Paper presented at the 47th Annual Convention of the American Electroplaters' Society, Los Angeles, July 1960. J. D. Thomas, D. W. Hardesty and C. F. Nixon. Metal Progress, v. 80, Nov. 1961, p. 182.

A more rapid test for determining corrosion on plated automobile parts has helped to improve corrosion resistance. The new test is based upon the CASS test with modifications. (R-general, T21, 1-53, 8-62)

914-R. (German.) Corrosion of Steels in Hot Gases. H. Keller. Dechema Monographien, v. 39, no. 600-615, 1961, p. 177-187.

Corrosion of ferritic Cr steels and austenitic Cr-Ni steels by S and V_2O_5 contained in gases at up to 1300° C. Preliminary testing of corrosion resistance of steel in contact with coke containing 3% S and a gas atmosphere containing 5-10% CO and N at temperatures from 800-1100° C. (R6r, R7, 2-62; ST)

915-R. (German.) Effects of Coatings on Susceptibility to Stress Corrosion of Austenitic and High-Strength Steels. E. Baerlecken and K. Lorenz. Dechema Monographien, v. 39, no. 600-615, 1961, p. 213-228.

Inhibition of stress corrosion of ferritic and austenitic Cr-Ni steels by Cr coating and of high-strength

steels by Pb coating. Influence of composition of steel and surface coating on stress corrosion rate. (R1d, L17; SS-e, SGB-a, Cr, Pb, 17-57)

916-R. Corrosion Research Trends in the U.S.S.R. W. G. Cass. Corrosion Technology, v. 8, Oct. 1961, p. 309-311.

Survey of metal corrosion studies with regard to electrochemical, atmospheric and underground corrosion; corrosion under conditions of mechanical stress, corrosion properties of metal semiconductors such as Ge or Si, corrosion protection using organic and inorganic metallic coating, plating and cladding; and diffusion and heat treatment processes. Classification of film formation and surface phenomena and thickness determination. (R-general, L-general, 10-54)

917-R. (German.) Improvement of Resistance to Tarnishing of Silver and Electrocoatings of Silver. G. H. Schmidt. Elektrie, v. 14, Aug. 1961, p. 245-248.

Increase of corrosion resistance of Ag surfaces by alloying with emphasis on use of Ag-Pd alloys and corrosion protection by electrochemical passivation and mechanical or electrolytic protective coating. Testing of usefulness of protection in various atmospheres and surroundings such as open air, enclosed rooms, industrial and green-house climates. (R2r, 2-60, R10c, L-general; Ag-b, Pd)

918-R. (German.) Chemical Passivation of Metallic Surfaces. C. Kalauch. Elektrie, v. 14, Aug. 1961, p. 253-256.

Review of passivation methods for metal surfaces including alloying (stainless steel); anodic passivation (Al, Fe, Ag, Sn); dipping in aqueous salt solutions of controlled pH; use of passivating gas atmospheres and thermal treatments in water-free salts. Survey of reaction mechanisms and passivation technology. (R10c)

919-R. (German.) Action of Inhibitors in Metal Corrosion and Precipitation of Metallic Electrocoatings. H. Fischer. Dechema Monographien, v. 39, no. 600-615, 1961, p. 25-54.

Mode of action of organic and inorganic physical and chemical inhibitors including primary and secondary surface inhibitors and electrolytic film inhibitors. Reaction mechanisms are discussed in terms of capacity-voltage, current-potential and metal recovery-current density curves, chemisorption and passivation. 19 ref. (R10b, R10c; 8-62)

920-R. (German.) Inhibition of Acid Corrosion of Iron by Adsorption Inhibitors. H. Kaesche. Dechema Monographien, v. 39, no. 600-615, 1961, p. 55-82.

Investigation of mechanism and kinetics of corrosion inhibition for Fe by cathodic, anodic and mixed adsorption-inhibitors using current-potential measurements in H_2SO_4 and Na_2SO_4 solutions of various concentration. 34 ref. (R10b, R6g; Fe)

921-R. Characteristics of Moisture Deposition on Corrosion Specimens. P. J. Sereda. Materials Research & Standards, v. 1, Sept. 1961, p. 719-723.

The appearance of moisture on specimens of steel, Zn, stainless steel and Cu having different thickness and surface conditions and exposed to rain and dew is studied by time-lapse photography. The temperatures of the specimens are recorded during time of wetness to show effects on different metals and different thicknesses of the same metal. 5 ref. (R11k; ST, Zn, Cu)

SECTION S

INSPECTION and CONTROL

1-S. A Composite Procedure for the Analysis of Aluminium Bronze Alloys. M. Freegarde and B. Allen. Analyst, v. 85, Oct. 1960, p. 731-735.

Spectrophotometric determination of Cu, Al, Fe, Ni, Zn, Mn, Pb, Si and Sn in aluminum bronze alloys. 10 ref. (S11a; Al-b, Cu-s)

2-S. The Determination of Copper in Lead and Lead Cable-Sheathing Alloys. J. H. Thompson and M. J. Ravenscroft. Analyst, v. 85, Oct. 1960, p. 735-738.

Optical density of dithizone extracted and complexed Cu is measured spectrophotometrically. Cu content is read from a calibration graph. 6 ref. (S11a; Pb-b, Cu)

3-S. The Determination of Zinc in Indium and Nickel. E. G. Towndrow, R. Hutchinson and H. W. Webb. Analyst, v. 85, Oct. 1960, p. 769-770.

Samples are dissolved in HCl, transferred to a cellulose column and eluded with butyl alcohol to separate the Zn which is determined polarographically. (S11m; In, Ni, Zn)

4-S. (Polish.) An Isotopic Contactless Thickness Meter for Hot Rolled Steel Strip. Tadeusz Florkowski and Ludwik Gorski. Hutnik, v. 27, July-Aug. 1960, p. 273-278.

Thickness of steel strip is measured with an accuracy of ± 0.04 mm. by a thickness meter based on the absorption of gamma rays from Cs^{137} radioactive isotopes. Deviations from the specified thickness are registered on an optical indicator. 9 ref. (S14e, 1-59; ST, 4-53)

5-S. (French.) Local Analysis of Metals by Secondary Ionic Emission. R. Castaing, B. Jouffrey and G. Slodzian. Comptes Rendus, v. 251, Aug. 22, 1960, p. 1010-1012.

Bombardment of a metal by a beam of primary ions producing emission of secondary ions characteristic of the region bombarded which are used to determine spectrographically the distribution of elements in the specimen. 6 ref. (S11c)

6-S. Does a Radiographed Vessel Cost More to Build Than One That Isn't? Robert Chuse. Welding Design & Fabrication, v. 33, Nov. 1960, p. 31-33.

Comparison of plate thickness and weld size requirements for radiographed and nonradiographed pressure vessels welded according to the ASME code. Cost analysis. (S13e, T26q)

7-S. Application of the Microemission X-Ray Spectrograph. Comparison of Analyses From Small Areas. J. F. Norton. Paper from "Advances in X-Ray Analysis", v. 1. Plenum Press, Inc., New York, N. Y., 1960, p. 219-229.

Techniques for determining spot size and sensitivity of the instrument. Application to composition and phase analysis, determination of transformations and identification and analysis of inclusions in Ni, Fe, Cr, Sc, W metals. Uses in measurements of thin films. (S11p, 1-52)

8-S. X-Ray Spectrographic Determination of Tantalum, Columbium, Iron and Titanium Oxide Mixtures Using Simple Arithmetic Corrections for Interelement Effects. Betty J. Mitchell. Paper from "Advances in X-Ray Analysis", v. 1. Plenum Press, Inc., New York, N. Y., 1960, p. 253-270.

A method of specific arithmetic corrections for absorption and enhancement interelement effect is developed

for X-ray composition analysis. Comparison of results with optical spectrographic and chemical analysis of Ta, Cr, Fe and Ti. 9 ref. (S11p; Cb, Fe, Ta, Ti)

9-S. Determination of Uranium Dioxide in Stainless Steels by the X-Ray Fluorescence Solution Method. Lavada Moudy, Louis Silverman and William Houk. Paper from "Advances in X-Ray Analysis", v. 1. Plenum Press, Inc., New York, N. Y., 1960, p. 271-281.

X-ray composition analysis of 304 stainless steel-UO_2 mixture in perchloric acid solution to determine the homogeneity of UO_2 in nuclear reactor fuel elements fabricated from powdered stainless steel and UO_2. 6 ref. (S11p, T11g; SS, U, 14-68, 17-57)

10-S. Microanalysis by X-Ray Absorption, Fluorescence, Emission and Diffraction Using Ultra-Fine X-Ray Sources. V. E. Cosslett, P. Duncumb, J. V. P. Long and W. C. Nixon. Paper from "Advances in X-Ray Analysis", v. 1. Plenum Press, Inc., New York, N. Y., 1960, p. 329-337.

X-ray microanalysis using high intensity point source developed for X-ray microscopy. Application to thin sections and areas of about 10 microns in diameter. 7 ref. (S11e, M21f, 1-52)

11-S. Applications of the Electron Probe Microanalyzer. L. S. Birks and E. J. Brooks. Paper from "Advances in X-Ray Analysis", v. 1. Plenum Press, Inc., New York, N. Y., 1960, p. 339-349.

Composition analysis of metals, minerals and alloys including stainless steel, Inconel X and a Fe-C alloy. Effect of specimen preparation on analytical results. (S11e, 1-52)

12-S. X-Ray Spectrographic Analysis of Nickel Containing Alloys With Varied Sample Forms. C. Manning Davis and George R. Clark. Paper from "Advances in X-Ray Analysis", v. 1. Plenum Press, Inc., New York, N. Y., 1960, p. 351-366.

Direct analysis, with and without internal standards, of alloys and metallurgical products which come to the laboratory in the form of drillings, millings, filings and powders. 7 ref. (S11p, 3-73; Ni-b)

13-S. Direct Assay for Molybdenum and Ruthenium in Uranium Alloys by X-Ray Emission Spectrometry. D. S. Flikkema and R. V. Schablaske. Paper from "Advances in X-Ray Analysis", v. 1. Plenum Press, Inc., New York, N. Y., 1960, p. 387-398.

Concentration of Mo and Ru in nonradioactive ternary uranium alloys representative of high burn-up reactor fuels is determined for flat surfaced specimens by examining the intensity of the Ru and Mo K emission lines. (S11p; U-b, Mo, Ru)

14-S. Determination of Oxygen in Zirconium and Zircaloy by the Inert Gas Fusion Method. Phineas Elbling and G. W. Goward. Analytical Chemistry, v. 32, Nov. 1960, p. 1610-1613.

Fusion of the samples in the presence of carbon and Pt reduces the oxygen to CO, which is removed from the furnace by a stream of argon, oxidized to CO_2 and determined conductometrically in NaOH solution. Coefficient of variation is about ±6% at 1000 ppm. (S11m; Zr, Zr-b, O)

15-S. Determination of Oxygen in Yttrium and Yttrium Fluoride by the Inert Gas Fusion Method. Charles V. Banks, Jerome W. O'Laughlin and George J. Kamin. Analytical Chemistry, v. 32, Nov. 1960, p. 1613-1616.

Fusion of the samples in the presence of carbon and molten Pt reduces the oxygen to CO which is removed from the furnace by argon, oxidized to CO_2 and measured conductometrically in $Ba(OH)_2$ solution. Results were compared with those from vacuum fusion and distillation, emission spectroscopy and $KBrF_4$ techniques. 10 ref. (S11m; Yt, O)

16-S. Determination of Oxygen in Beryllium Metal by the Inert Gas Fusion Method. Silve Kallmann and Fred Collier. Analytical Chemistry, v. 32, Nov. 1960, p. 1616-1619.

Fusion of the sample in the presence of carbon and molten Ni reduces the oxygen to CO which is removed from the furnace with argon, oxidized to CO_2 and measured conductometrically in $Ba(OH)_2$ solution. 23 ref. (S11m; Be, O)

17-S. Use of Tritium Tracer for the Determination of Hydrogen in Aluminum.

Arthur S. Gillespie, Jr. Analytical Chemistry, v. 32, Nov. 1960, p. 1624-1626.

Hydrogen is extracted as tritium from Al by solid extraction methods and assayed in an ion chamber. No surface gas corrections are required. (S11s; Al, H)

18-S. X-Ray Fluorescence Method for Determination of the Transition-Metal Content in Very Small Specimens of Alloys. P. J. Brown. Journal of Scientific Instruments, v. 37, Oct. 1960, p. 394-397.

Quantitative determination of the transition metal content of $(FeCu)Al_6$ alloys containing transition metals of the first long period. Method depends on measurement of the intensity of the fluorescent X-rays emitted by the specimen. (S11p; Al-b, Fe, Cu)

19-S. (French.) Specific Cases of Ultrasonic Inspection of Iron Castings. R. Rasschaert. Fonderie Belge, v. 30, Oct. 1960, p. 257-262.

Procedure and equipment; permeability of cast irons to ultrasonic waves; examination of a number of castings, chiefly in nodular iron; interpretation of oscillograms and evaluation of defects. (S13g; CI)

20-S. A Chemical-Spectrographic Method for the Determination of Boron in Iron and Nickel-Base Alloys. R. Anerson. Applied Spectroscopy, v. 14, May 1960, p. 123-125.

Base metals of the alloys are removed by Hg cathodes and replaced by a Cu matrix. Samples are thin compared to boron standards with the same matrix. (S11k; Fe-b, Ni-b, B)

21-S. Spectrographic Analysis of Indium Metal for Impurities. H. M. Hyman. Applied Spectroscopy, v. 14, May 1960, p. 125-127.

Determination of Cu, Ga, Fe, Pb, Ni, Ag, Sn and Zn in In using a high-voltage a-c. arc excitation on a platform-centerpost electrode coated with dried sample salts for analysis. (S11k; In, Ag, Cu, Fe, Ga, Ni, Pb, Sn, Zn)

22-S. (German.) Volumetric Analysis of Lead-Tin Bronzes. H. Korner. Metall, v. 14, Nov. 1960, p. 1106-1107.

Titrimetric determination of Cu, Sn and Pb in bronzes composed of 67.5-83% Cu, 5-22% Pb and 5-10% Sn. (S11j; Cu-s, Sn, Pb)

23-S. (Czech.) Spectrographic Analysis of Steel. J. Zahradnik. Strojirenstvi, v. 10, Sept. 1960, p. 702-704.

Simultaneous determination of Mn, Si, Cr, V, W, Ni, Co, Mo and Al in steel using a Cu electrode to produce the spark. For Cu determination, a carbon electrode is used. (S11k; ST, Al, Co, Cr, Mn, Mo, Ni, Si, V, W)

24-S. (German.) Radiographic Analyses. Hans Neff. VDI Zeitschrift, v. 102, Oct. 21, 1960, p. 1433-1437.

X-ray analysis of Al, Fe, Mn, Si, Zn and steel to determine lattice structure, residual stress and chemical composition. (S11p, M26, Q25h; Al, Fe, Mn, Si, Zn, ST)

25-S. (Japanese.) Spectrophotometric Determination of Phosphorus in Steels Containing Columbium. M. Kawahata, H. Mochizuki and T. Misaki. Japan Analyst, v. 9, Sept. 1960, p. 727-730.

Determination of phosphorus in 18-8 stainless steel containing trace amounts of P, Cb or Ta by absorption spectrophotometry. 8 ref. (S11a; SS, Cb, P, Ta)

26-S. (English.) The Electrochemical Jet Method for Determination of the Thickness of Electrodeposits on Metals and Their Alloys. D. Singh. Banaras Hindu University, Journal of Scientific Research, v. 10, Dec. 1959, p. 13-20.

Measurement of average and local thickness of electrodeposited Ni, Cd, Cu, brass and bronze coatings by anodic dissolution. 4 ref. (S14, R2g; Cu-n, Cu-s, Cu, Cd, Ni, 8-62)

27-S. (French.) Industrial Applications of Ultrasonic Testing. Pt. 2. P. Hermadinquer. Pratique des Industries Mecaniques, v. 46, Sept. 1960, p. 241-247.

Location and evaluation of defects in machine parts, welded joints and rails. Equipment design and operation. (S13g, 1-52, T7, T23q; 7-51)

28-S. Gamma Ray Inspection of Steel Castings. J. Taylor. Engineer and Foundryman, v. 26, Sept. 1960, p. 21-23.

Detection of flaws in steel castings by radiological examination using a Co source. (S13e; ST, 5)

29-S. Standards and Specifications in the Foundry. G. C. Webster. Engineer and Foundryman, v. 26, Sept. 1960, p. 24-31.

Specifications for the composition of gray iron, Mn steel and Cu base alloys. (S22, E-general; CI-n, Cu-b, ST, Mn)

30-S. Radioisotopes Broaden Field for Non-Destructive Tests. Robert Hamlin. Iron Age, v. 186, Dec. 1, 1960, p. 127-129.

Use of radioisotopes for inspection of stainless steel components, welds, castings, tanks and pressure vessels. (S13e, T26q; SS, 5, 7-51)

31-S. A Precision Instrument for Testing the Thickness of Electroplates by Electrolytic Stripping Method. P. B. Mathur. Plating, v. 47, Nov. 1960, p. 1274-1276.

Thickness of Ag, Cu, Ni, Cd, Cr, Sn, Zn, Au and Pb deposits is measured by a device consisting of a current divider, potential divider and potential recorder which does not require calibration. 5 ref. (S14c; Ag, Cd, Cr, Cu, Ni, Sn, Zn, 8-62)

32-S. (Russian.) New Gamma-Defectoscope With Scintillation. V. N. Fainberg. Khimicheskoe Mashinostroenie, no. 2, 1960, p. 41-43.

Detection of defects in steel and cast iron parts using a device which passes an amplified stream of electrons produced by irradiation of phosphorus with gamma rays through the metal. 4 ref. (S13e; CI, ST)

33-S. (Russian.) New Method for Determination of Gases in Metals. Yu. A. Klyachko and O. D. Larina. Zavodskaya Laboratoriya, v. 26, Sept. 1960, p. 1047-1051.

Armco iron 02 rimmed steel and OKH18N9T stainless steel samples are analyzed for O, N and H content by anodic dissolution. 6 ref. (S11r; Fe, SS, ST-d, H, N, O)

34-S. (Russian.) Control of Metal Parts by Eddy Currents Measurements. L. M. Suvorov. Zavodskaya Laboratoriya, v. 26, Sept. 1960, p. 1096-1101.

Measurement of thickness and electrical conductivity of Al, Au, Cd, Pb and Sn coatings using a measuring coil. 5 ref. (S14h, P15g; Al, Au, Cd, Pb, Sn, 8)

35-S. (Russian.) Factors Influencing Sensetivity of Ultrasonic Defectoscopy. A. K. Gurvich. Zavodskaya Laboratoriya, v. 26, Sept. 1960, p. 1102-1103.

Measurement of the effect of oil and water coatings on the sensitivity of ultrasonic flaw detection methods using rolled steel and duralumin samples. (S11g; Al-b, ST, 4-60, 8)

36-S. Industrial Radiography. G. F. MacKnight. Welding Fabrication and Design, v. 4, Oct. 1960, p. 31-37.

Theory and techniques of X-ray and gamma ray examination of steel welds and castings for various types of defects. Design of X-ray tubes, film and intensifying screens. Interpretation of the radiograph. Safety precaution requirements. (S13e, X8g; ST, 5, 7-51)

37-S. "Black Light" Pin Points Flaws in Tube-Conditioning Line. Iron Age, v. 186, Nov. 24, 1960, p. 98-99.

By automatic start-stop turning of 10 in. diam. rounds, an operator checks the entire surface for seams and other flaws. Without excessive waste defects are removed by flame scarfing in the conditioning area. (S13; 4-60)

38-S. Nondestructive Testing of Reactor Materials. Metal Progress, v. 78, Dec. 1960, p. 148, 151-A, 152, 154, 156, 158.

Specifications for reactor materials. Radiation test methods--conventional radiography, autoradiography, fluoroscopy, electron radiography; ultrasonic testing; electromagnetic testing and other methods. (S13, T11)

39-S. Nondestructive Testing of Small Tubing. J. R. Grieve and A. M. Bounds. Metal Progress, v. 78, Dec. 1960, p. 110-114, 126, 128.

This article compares eight nondestructive testing methods--visual, boroscopic, eddy current, dye penetrant, magnetic particle, ultrasonic, radiographic and hydrostatic. Though eddy current testing is considered to be the most versatile, no one test can give a complete answer by itself. (S13; 4-60)

40-S. Determination of Uranium in Flotation Concentrates and in Leach Liquors by X-Ray Fluorescence. G. L. Smithson, R. L. Eager and A. B. Van Cleave. Paper from "Advances in X-Ray

Analysis", v. 2. Plenum Press, Inc., New York, 1960, p. 175-191.

X-ray analysis of sulphate liquors and U_3O_8 concentrates obtained from pegmatite. Determination of U and Fe using Sr, Yt and Br internal standards. 9 ref. (S11p; RM-n, Fe, U)

41-S. X-Ray Spectrographic Determination of Uranium and Plutonium in Aluminum and Other Reactor Fuel Materials. Maurice C. Lambert. Paper from "Advances in X-Ray Analysis", v. 2. Plenum Press, Inc., New York, 1960, p. 193-213.

X-ray fluorescence measurement of Al cladding thickness over Pu cores, determination of UO_2 in cryolite and Bi and determination of U and Pu in Al alloy fuel rods and plates. Modifications in design of spectrographic and radiation detection equipment with attention to increased sensitivity. (S11p, T11g; Al-b, U, Pu)

42-S. Crystal Chemical Studies by X-Ray Fluorescence. Eugene W. White, Herbert A. McKinstry and Thomas F. Bates. Paper from "Advances in X-Ray Analysis", v. 2. Plenum Press, Inc., New York, 1960, p. 239-245.

X-ray fluorescence spectroscopy detection of peak shifts in the characteristic radiation for Al, S, Cl, Ti, V and Fe crystals using flat crystals of NaCl, LiF and EDT as analyzers. Influence of valence state and coordination number on radiation wave length. 6 ref. (S11p; Al, Fe, Ti, V, 14-61)

43-S. Quantitative Analysis of Trace Amounts of Tin in Steel by Means of X-Ray Fluorescence. T. S. Whitehouse. Paper from "Advances in X-Ray Analysis", v. 2. Plenum Press, Inc., New York, 1960, p. 257-260.

Measurement of Sn concentration as low as 0.01% in steel to an accuracy of 0.003% by X-ray fluorescence using a pulse height analyzer to reduce the background. (S11p; ST, Sn)

44-S. Cladding Thickness of Fuel Elements by X-Rays. Beverley James Lowe, Payson D. Sierer, Jr., and Robert B. Ogilvie. Paper from "Advances in X-Ray Analysis", v. 2. Plenum Press, Inc., New York, 1960, p. 275-281.

Thickness of Al, 304 stainless steel and Zr claddings on tubular uranium fuel elements fabricated by co-extrusion. X-ray fluorescence measurement by attenuation of the characteristic X-radiation from the uranium base metal by the cladding material and Compton scattering of X-rays from the cladding surface. (S14e, T11g; U, Al, SS, Zr, 8-66)

45-S. (Czech.) Determination of Pipe in Ingots and Blooms. F. Khol and J. Schmied. Hutnicke Listy, v. 15, Oct. 1960, p. 763-765.

Billets and blooms rolled from steel ingots to a maximum 200 mm. thickness are tested for pipe defects by exposure to gamma rays obtained from the isotope Co_{60}. Effects of size of defect, material composition, distance between irradiation source and detector and irradiation and detector parameters on the accuracy of results. 6 ref. (S13e, 9-67; ST, 4-52)

46-S. (Czech.) Photometric Determination of Silicon in Steel. Miroslav Pangrac. Hutnicke Listy, v. 15, Oct. 1960, p. 807-808.

Use of various solutions containing ammonium molybdate, oxalic acid and Mohr's salt for the determination of 0.05-0.48% Si in alloy steels with 0.14-0.95% C, 0.26-0.64% Mn, 1.18-4.06% Cr, 0.27-8.38% W, 0-2.85% V, 0-1.94% Mo and 0-1.94% Ni. 29 ref. (S11a; AY, Si)

47-S. (Czech.) Spectrographic Determination of Trace Elements in Iron. Marie Kotrbova. Hutnicke Listy, v. 15, Oct. 1960, p. 802-803.

High-purity Fe dissolved in diluted H_2SO_4 with $CuSO_4$ added is heated to boiling temperature and a stream of H_2S is passed through it. The precipitate formed is filtered off, washed, dried and held at 450° C. for 2 hr. with subsequent spectrographic determination of Mo, Sn, Sb and Bi. 4 ref. (S11k; Fe-a, Bi, Mo, Sb, Sn)

48-S. Ultrasonic Setup Tests Heavy Sections. Steel, v. 147, Dec. 5, 1960, p. 104-105.

Immersion ultrasonic inspection of steel forging squares, round bars and large seamless tubing, using a testing tank which handles sections of steel up to 12 in. sq. or 11 in. in diameter. (S13g; ST, 4-51, 4-55, 4-60)

49-S. Navy Will Set New Casting Standards. Steel, v. 147, Dec. 5, 1960, p. 106-107.

Radiographs are obtained on defective castings of 4130, 4140, 4330, 347 and 410 steels for use as acceptance standards during inspection of aircraft and missile castings. (S13e; SS, 5)

50-S. Non-Metallic Inclusions, Their Quantitative Extraction From Steel. H. Walz and R. A. Bloom. Journal of Metals, v. 12, Dec. 1960, p. 928-932.

Electrolytic extraction of oxide inclusions and subsequent treatment of the residue by vacuum drying, chlorination, vacuum sublimation and oxidation. Effect of procedures on isolation of nonmetallic inclusions is studied using ingot scums. Technique applied to 1040 and 4340 alloy steels. 27 ref. (S11f; AY, 9-59)

51-S. (Russian.) Spectral Analysis of Inclusions in Iridium and Rhodium. A. A. Kuranov, V. D. Ponomareva and N. I. Chertsova. Zhurnal Analiticheskoi Khimii, v. 15, Apr. 1960, p. 476-480.

Preparation of reference standards for spectral analysis from metal powders. Method for quantitive determination of Pt, Pd, Ru, Au, Ba, Si, Rh, Fe, Ni, Cu, Al and Pb in Ir and Rh. 15 ref. (S11c; Ir, Rh, 9-69)

52-S. (Dutch.) Nondestructive Testing of Weldments. W. J. Kaufman. Lastechniek, v. 26, Sept. 1960, p. 153-165.

Inspection of weldments by ultrasonics and by exposure to X-rays, electrons or radon particles for detection of cracks and included slag. (S13e, S13g; 7-51)

53-S. Non-Destructive Testing of Colliery Gear by Radiographic Methods. Pt. 1. Mining Journal, v. 255, Nov. 4, 1960, p. 498-500.

Detection of structural defects in metal parts and welds, especially of Fe and steel, by X-ray or X-ray penetration techniques. (S13e, T28; Fe-b, ST, 7-51)

54-S. (Italian.) Contribution to the Study of Spanish Casehardening Steels and the Direct Measurement of Case Depth. Pt. 2. P. G. Gomez and E. Asensi. Tecnica Metalurgica, v. 16, Mar-Apr. 1960, p. 55-93.

Critical, comparative study of methods of measuring case depth and hardness of carbon steel, Cr-Mo steel, two Cr-Ni steels and a Cr-Ni-Mo steel treated in cyanide bath and with "Caron" mixture, a solid casehardening agent composed of carbon and barium carbonate, at temperatures of 875-925° C. for 1 to 8 hr. 56 ref. (S14, J28, Q29n; CN, ST, Cr, Mo, Ni)

55-S. (English.) Radiometric Estimation of Traces of Zirconium. K. R. Kar and B. C. Sawhney. Journal of Scientific & Industrial Research, v. 19B, Oct. 1960, p. 401-403.

The amount of phosphorus precipitated by a ZR sample from a standard pyrophosphate solution tagged with P^{32} is used to determine Zr in the presence of interfering elements such as Ag, Ce and La. 3 ref. (S11q; Zr)

56-S. Polarographic Determination of Titanium in Red-Mud. G. S. Deshmukh and J. P. Srivastava. Journal of Scientific Research of Banaras Hindu University, v. 10, Dec. 1959, p. 101-107.

Determination of Ti in red mud, a by-product obtained in manufacture of Al and titaniferrous minerals by polarography in 0.4 M sodium citrate at an optimum pH of 5.5. Comparison with gravimetric and colorimetric methods. (S11m; Ti, 14-59)

57-S. (German.) Photometric Analysis of Vanadium in Hard Metals, Carbides and Oxides of Tungsten, Tantalum and Titanium. Heinz Schwarz. Zeitschrift fur Analytische Chemie, v. 176, Apr. 1960, p. 241-249.

Determination of up to 3% vanadium in the presence of WO_4 ions by photometric measurement of yellow-brown color of pervanadic acid against water. Influence of free H_2SO_4, salt concentration, H_2O_2 and alloying elements (W, Ta, Ti, Nb). (S11a; Ta-b, Ti-b, W-b, V)

58-S. (Japanese.) Fractional Determination of Quartz and Silicate in Manganese and Reduced Manganese Ores. Shiro Watanabe. Japan Institute of Metals, Journal, v. 24, Aug. 1960, p. 479-482.

Ore specimens dissolved in H_3PO_4 and $Na_2O(BF_3)_4$ solutions, with paper pulp added, are washed in HCl and water, filtered and ignited at 950° C. Silicate and quartz are determined using HF and HCl. 6 ref. (S11j; Mn-b, RM-n)

59-S. (Japanese.) Rapid Volumetric Method for Determining Si in Al Alloy. Masami Hasegawa. Japan Institute of Metals, Journal, v. 24, Aug. 1960, p. 493-496.

Alloys containing 0.39-5.81% Si are dissolved in HNO_3, HF and H_2O, with Si being precipitated by KNO_3 to form K_2SiF_6. The Si content is determined by titration with NaOH. 4 ref. (S11j; Al-b, Si)

60-S. (Japanese.) Rapid Determination of Zn in Al Alloys by EDTA Titration Method. Shigeo Wakamatsu. Japan Institute of Metals, Journal, v. 24, Aug. 1960, p. 504-506.

Zn in the presence of Sn and Al is titrated with EDTA, NH_4F being used to mask the interference of Al and Sn. Specimens are treated in NaOH and H_2O_2 and Na_2S solutions. 10 ref. (S11j; Al, Zn)

61-S. (Japanese.) Fractional Determination of Various Elements and Rational Analysis in Manganese and Reduced Manganese Ores by Chemical Analysis. Shiro Watanabe. Japan Institute of Metals, Journal, v. 24, Aug. 1960, p. 483-486.

Ore specimen of Mn silicate dissolved in H_2SO_4 and H_2O_2, with paper pulp added, is washed in H_2O and H_2SO_4, ignited and fused with Na_2CO_3 Fe and Mn and their oxides and silicates are determined by titration. 10 ref. (S11j; Mn-b, RM-n)

62-S. (Translation-Columbia.) Spectroscopic Determination of the Major Components of Noble Metal Alloys. N. I. Varlamova and N. S. Sventitskii. Academy of Sciences of the USSR, Bulletin, Physical Series, v. 23, Sept. 1959, p. 1124-1125.

Cu content in binary Ag-Cu alloys and in ternary Cu-Ag alloys containing Ni or Au is determined by spectroscopic analysis using a low energy, high frequency spark light source. 8 ref. (S11k; Ag-b, Cu-b, Ni, Au)

63-S. (Translation-Columbia.) Local Analysis of Complex Alloys. I. L. Mirkin and E. P. Rikman. Academy of Sciences of the USSR, Bulletin, Physical Series, v. 23, Sept. 1959, p. 1164-1166.

Local spectroscopic analysis of alloy steel microsections containing Cb and Tl and of cast iron microsections containing Mg using an arc unit rectified by a kenotron to supply high-frequency current. 4 ref. (S11k, S11e; AY, CI, Cb, Mg, Tl)

64-S. (Translation-Columbia.) Determination of Nitrogen in Chromium and Titanium. S. A. Skotnikov. Academy of Sciences of the USSR, Bulletin, Physical Series, v. 23, Sept. 1959, p. 1119-1121.

Spectroscopic analysis of Cr, Ti and steel for nitrogen content using an electric spark in a CO_2 atmosphere. Optimum spark parameters are determined for maximum sensitivity. (S11k; Cr, ST, Ti, N)

65-S. (Translation-Columbia.) Methods of Calibration in Analysis of Alloys. E. S. Kudelya and A. S. Dem'yanchuk. Academy of Sciences of the USSR, Bulletin, Physical Series, v. 23, Sept. 1959, p. 1135-1136.

Quantitative spectrochemical analysis of steel to determine Si, Ni, P and C content using a single or three standard calibration method. (S11k; ST, C, Ni, P, Si)

66-S. (Translation-Columbia.) Analysis of Heat Resistant and Light Alloys and Steels by the Photoelectric Procedure. K. A. Sukhenko, K. A. Moiseeva, L. D. Metalina, I. G. Tishin, N. V. Penkina and D. G. Bakanov. Academy of Sciences of the USSR, Bulletin, Physical Series, v. 23, Sept. 1959, p. 1099-1101.

Photometric analysis of Al, Mg and Ni alloys and steels using a photoelectric steelometer and counterelectrodes. 3 ref. (S11a; Al-b, Mg-b, Ni-b, ST, SGA-h)

67-S. (Translation-Columbia.) Influence of the Chemical Composition and Heat Treatment of Steel Samples on the Results of Spectroscopic Determination of Nitrogen. N. Buyanov, L. Fedorova and V. Korotkov. Academy of Sciences of the USSR, Bulletin, Physical Series, v. 23, Sept. 1959, p. 1117-1118.

Influence of Al, Cr, Si and Ti content and of quenching and annealing heat treatments on the results obtained from spectroscopic analysis of ST-10, Kh25, Kh25t, Kh25Yu10 and transformer steels for nitrogen content. (S11k, 2-60, 2-64; ST, N)

68-S. (Translation-Brutcher no. 4887.) Determination of Hydrogen in Steel by the Carrier-Gas Method. K. Abresch, W. Dobner and H. Lemm. Archiv fur das Eisenhuttenwesen, v. 31, June 1960, p. 351-354.

Advantages of carrier-gas method of precise and speedy determination of hydrogen in steel, using two different temperature ranges. Separation of hydrogen by diffusion through Pd; design of apparatus. (S11r; ST)

69-S. (Translation-Brutcher no. 4888.) Effect of pH Value of Electrolyte Upon Quantity and Composition of Oxide Inclusions Extracted From Fully Killed Basic Bessemer Steels. E. Piper, H. Hagedorn and M. Frohlich. Archiv fur das Eisenhuttenwesen, v. 31, June 1960, p. 355-358.

Experimental study of loss-free electrolytic separation of oxides from basic Bessemer steels fully killed with calcium silicide, at low pH values. New type of electrolysis cell used by authors for continuous measurement and recording of the pH composition of residues after separation at pH values from 6.8 down to 1.0. (S11f; ST-g, 9-69)

70-S. (Translation-ConBur.) Spectrographic Determination of Aluminum in Uranium. E. A. Vernyi and V. N. Egorov. Journal of Analytical Chemistry of the USSR, v. 15, Jan-Feb. 1960, p. 23-25.

Method using fractional distillation with a carrier is developed for determination of small amounts of Al. Experiments are carried out to determine effect of Ba and carbon powder on the intensity of Al lines. Effect of third elements on the results of Al determination. 6 ref. (S11c, 2-60; Al, U)

71-S. (Translation-Columbia.) Spectroscopic Determination of High Concentration Components in Steels and Other Alloys. A. G. Komarovskii. Academy of Sciences of the USSR, Bulletin, Physical Series, v. 23, Sept. 1959, p. 1126-1127.

Research spectroscopy on complex alloys and steels to determine the causes of the influence of "third" elements on the analytical result and to find means of reducing or eliminating this effect in spectrographic analysis by spark discharge. (S11k; ST)

72-S. (German.) Method for Photometric Determination of Phosphorus in Tungsten Ores. Christoph Winterstein. Zeitschrift fur Erzbergbau und Metallhuttenwesen, v. 13, Nov. 1960, p. 546-549.

Determination of phosphorus in WO_3 samples containing P, Si and As by measuring the intensity of the orange-yellow color, which occurs on H_3PO_4 addition to a nitrate solution of NH_4VO_3 and NH_4MbO_3 Method for separation of W, Si and As. (S11a; W-b, P)

73-S. Electronic Analysis of the Iron-Nickel System. S. Yamaguchi. Electrochemical Society, Journal, v. 107, Dec. 1960, p. 1011-1012.

Magnetized Invar (36 wt.% Ni) is analyzed by electron diffraction at 50 and 120° C. 4 ref. (S11p; Fe-b, Ni-b)

74-S. (Italian.) Methods and Apparatus Used in Control of Surface Finishes at the Ansaldo Co.'s Machinery Plant. L. Cavazzoni and P. Delfanti. Ingegneria Meccanica, v. 9, Sept. 1960, p. 45-55.

Direct, indirect, optical and electrical control of roughness of machined surfaces; use of standard roughness samples and Fax-Film. (S15)

75-S. (Japanese.) Determination of Impurities in Some Non-Ferrous Metals by Fluorescent X-Ray Spectroscopy. Kichinosuke Hirokawa. Japan Institute of Metals, Journal, v. 24, Sept. 1960, p. 555-558.

Determination of Cd, Fe, Pb and As in Zn; Pb and As in Sn; and Fe in Ti. Data are given for calibration curves and instrumentation. 6 ref. (S11p)

76-S. (Japanese.) Determination of Alloying Elements in Binary and Ternary Alloys by X-Ray Fluorescent Spectroscopy. Pt. 1. Kichinosuke Hirokawa. Japan Institute of Metals, Journal, v. 24, Sept. 1960, p. 559-562.

Preparation of calibration curves for X-ray fluorescent analysis of Sn-Pb, Pb-Sb, Sn-Sb and Sn-Sb-Pb alloys. Comparison of background substraction method with integrated area method for rapidity of analysis. 5 ref. (S11p, M24; Pb-b, Sb-b, Sn-b)

77-S. (Japanese.) Determination of Alloying Elements in Binary and Ternary Alloys by X-Ray Fluorescent Spectroscopy. Pt. 2. Kichinosuke Hirokawa. Japan Institute of Metals, Journal, v. 24, Sept. 1960, p. 562-564.

Application of a calculation method proposed by Brissey, Sherman and others to the determination of Sn, Sb and Pb in binary and ternary Sn-Pb-Sb compounds (in conjunction with the calibration curve method described in Pt. 1 of the report). (S11p, M24; Pb-b, Sb-b, Sn-b)

78-S. (Japanese.) Determination of Mg in Cast Iron by EDTA Titration Method. Shigeo Wakamatsu. Japan Institute of Metals, Journal, v. 24, Sept. 1960, p. 571-573.

Cast iron specimens dissolved in HNO_3 and HCl are subjected to methyl-isobuthyl-Ketone extraction and treated with

ammonium oxalate and NH_4OH. Mg is titrated with EDTA using EBT as an indicator. 10 ref. (S11j; CI, Mg)

79-S. Investigation of an Electrical Nondestructive Method of Measuring the Depth of Surface Hardness in Flame-Hardened Steels. J. A. Betts and J. P. Newsome. Institution of Electrical Engineers, Proceedings, Part C, v. 107, Sept. 1960, p. 265-271.

Use of an a-c. electric method based on measurement of the complex impedance of a search coil magnetically coupled to the test surface by a ferrite cup-core. Probe-coil electrical parameters and depth of hardness data are correlated for EN17, EN19, V9D, V10 and V13 steels. 9 ref. (S14b, Q29; ST)

80-S. Inspection Is the Key to Welded Tubing Acceptance. Steel, v. 147, Dec. 19, 1960, p. 110-111.

Ultrasonic and magnetic particle inspection of tubing. After mill inspection, the tubing goes through normalizing furnaces to eliminate the difference between the weld area and the body of the tubing. (S13; 4-60)

81-S. Determination of Low Concentrations of Aluminum and Chromium. L. R. Pittwell. Analyst, v. 85, Nov. 1960, p. 849-850.

Low concentrations of Al and Cr are determined by precipitation of the hydroxide using La as a carrier and subsequent examination of the precipitate by d.c. arc emission spectography. (S11k; Al, Cr)

82-S. The Determination of Boron in Aluminum and Silicon-Aluminum Alloys. E. G. Towndrow and H. W. Webb. Analyst, v. 85, Nov. 1960, p. 850-851.

Direct colorimetric procedure for determination of boron using dianthrimide solution. The use of boron-containing glassware has been avoided. (S11a; Al-b, Si-b, B)

83-S. Method for the Separation of Titanium, Zirconium, Iron and Aluminum From One Another and for Their Subsequent Determination. T. J. Murphy, W. S. Clabough and R. Gilchrist. National Bureau of Standards, Journal of Research, Pt. A. Physics and Chemistry, v. 64A, Nov-Dec. 1960, p. 535-542.

Precipitation of Ti, Zr, Fe and Al from Ba titanate ceramic dielectrics after dissolving by digestion in a solution of equal volumes of HCl and H_2O. The elements are then separated from the alkaline earths, alkalies and Si by a double precipitation with 8-hydroxyquinoline. Application to analytical problems other than those of ceramic dielectrics. 16 ref. (S11b; Al, Fe, Ti, Zn, 6-70)

84-S. Spectro Photometric Determination of Indium With 1-(2-Pyridylazo)-2-Naphthol. Shozo Shibata. Analytica Chimica Acta, v. 23, Nov. 1960, p. 434-438.

Determination of Zn in Zn residues using 1-(2-Pyridylazo)-2-Naphthol in chloroform solution to produce a red chelate with absorbance maxima at 530 and 560 millimicrons. (S11a; Zn, In)

85-S. Ion-Exchange Separation of Titanium From Steels and Its Determination With H_2O_2. Analytica Chimica Acta, v. 23, Nov. 1960, p. 438-440.

Quantitative separation of Ti from its associated elements in steels as the fluoride complex on an anion exchange resin. Results are given for stainless steel, cast iron, hematite iron and a permanent magnet alloy. (S11f, S11k; CI, Fe, SS, Ti)

86-S. Separation of Microgram Amounts of Cobalt in Ni Metal by TBP. V. T. Athavale, S. V. Gulavane and M. M. Tillu. Analytica Chimica Acta, v. 23, Nov. 1960, p. 487-490.

Major amounts of Ni are separated by extraction with tributyl phosphate after which Co is determined spectrophotometrically with nitroso-R salt. (S11f, S11k; Ni, Co)

87-S. (German.) Simplified Computation of the Thickness of Fillet Welds Withstanding Static Loads. H. Gut. Werkstatt und Betrieb, v. 93, Nov. 1960, p. 723-727.

Fillet welds are made from St 37, 50, 52, 35.8 and 45.8 steels. Computation of the weld thickness for various shearing stresses, with and without simultaneous bend stress, taking into account various structural shapes. (S14, 3-66; ST, 7-51)

88-S. (Japanese.) Sampling Method for Determination of Hydrogen Content in Molten Pig Iron. Shizuya Maekawa, Yohitoka Nakogawa, Masao Soga and Minoru Sudo. Imono (Japan Foundrymen's Society, Journal), v. 32, Sept. 1960, p. 658-663.

Vacuum sampling method and apparatus which is unaffected by gas evolution during metal solidification. Comparison to ladle sampling technique for hydrogen determination in molten pig iron at 1300-1450° C. 15 ref. (S11; CI-a, H)

89-S. (Russian.) Spectrometric Determination of Nickel in Pure Indium and Aluminum. V. M. Peshkova, V. M. Bochkova and L. I. Lazareva. Zhurnal Analiticheskoi Khimii, v. 15, May 1960, p. 610-613.

Spectrometric method of determining small amounts of Ni using alpha-furildioxime as a reagent. Effect of Cu content and pH on the accuracy of Ni determination. 6 ref. (S11a; Al, In, Ni)

90-S. Determination of Zirconium With Benzoylphenylhydroxylamine. D. E. Ryan. Canadian Journal of Chemistry, v. 38, Dec. 1960, p. 2488-2492.

Zr is completely precipitated by benzoylphenylhydroxylamine from 0.5 N acid solutions. The complex formed in H_2SO_4 solutions has a constant composition, Zr $(C_{13}H_{10}O_2N)_4$, and can be weighed directly to determine Zr. Product precipitated from HCl solutions must first be ignited to the oxide. 16 ref. (S11b; Zr)

91-S. Radiography as an Inspection Tool. Aluminium Courier, Sept. 1960, p. 22-23.

Inspection of Al castings and welds by X-rays or gamma-rays to detect gas cavities, sand or slag inclusions, shrinkage defects, lack of root penetration and lack of fusion. (S13e; Al, 5, 7-51)

92-S. Method Control in Testing--Key to Reliability. A. E. Christensen. Tool and Manufacturing Engineer, v. 45, Dec. 1960, p. 61-64.

Nondestructive testing of ball separators by magnetic particle methods to illustrate ways in which an inspection operation can be made more reliable. Magnetic particles are applied as dry powder or as a suspension in an oil or water vehicle. A magnetic field is usually introduced by passage of a current either through or around the part being tested. Missile applications. (S13j, W15r)

93-S. (German.) Quantitative Chemical Analysis of Individual Nonferrous Metals Alloyed in Iron and Steel. A. Klinkmann. Metall, v. 14, Dec. 1960, p. 1190-1194.

Analysis of Mn in unalloyed steel by titration with Na_3AsO_3 using the Smith Method and in alloyed steel with up to 2% Mn by the Volhard-Smith Method. Photometric analysis of Cu in alloyed or unalloyed steels. Oxidimetric determination of Si (up to 1%) and Cr (up to 5%). Volumetric and potentiometric analysis of Cr and V for Cr contents up to 30% and vanadium over 1% using the silver nitrate-persulphate process. (S-general; Fe, ST, Cr, Cu, Mn, Si, V)

94-S. (Japanese.) Nondestructive Determination of Trace Amounts of Manganese in Steel by Neutron Activation. Hisashi Mori and Hirokazu Vmezawa. Japan Institute of Metals, Journal, v. 24, Oct. 1960, p. 641-645.

Neutron activation analysis using a JRR-1 reactor for irradiation of specimens, the induced radioactivity of Mn-56 being measured by a well type scintillation counter and a gamma ray spectrometer. Mn determinations are compared to chemical analysis. (S11q; ST, Mn)

95-S. (Japanese.) A Rapid Volumetric Method for Determination of Si in Al Alloys (Quinoline Method). Masami Hasegawa. Japan Institute of Metals, Journal, v. 24, Oct. 1960, p. 654-657.

Volumetric analysis of 0.39-12.74% Si-Al specimens by precipitation of the Si as the quinoline complex, $(C_9H_7N)_4H_4(SiO_4.12MoO_3)$, with subsequent titration. 7 ref. (S11j; Al-b, Si)

96-S. Recommended Practice for X-Ray Inspection of Fusion Welded Joints on Al and Its Alloys and Mg and Its Alloys, Up to Two Inches Thick. Lastechniek, v. 26, Nov. 1960, p. 231-234.

Directions for surface preparation, marking of the part tested and evaluation of radiographs by quality indicators. Recommended positions for radiation source and film. (S13e; Al-b, Mg-b, 7-51)

97-S. (Russian.) Determination of Vanadium in Steel and Ferroalloys by Amperometric Titration Using Two Indicator Electrodes. L. S. Studenskaya and O. A. Songina. Zavodskaya Laboratoriya, v. 26, Oct. 1960, p. 1102-1104.

Determination of vanadium by titration in the presence of potassium permanganate. (S11j; ST, V)

98-S. Measuring the Roughness Factor of a Small Disk. ASTM Bulletin, Sept. 1960, p. 56-57.

The steel disk is weighed in both air and water and thickness measured by a vernier micrometer. Calculation of the roughness factor from these data requires no assumed density of the material. (S15; ST)

99-S. (Japanese.) Shrinkage Defects in Spheroidal Graphite Cast Irons Treated With Spheroidizing Reagents. Hiroshi Nakamura and Takao Takase. Imono (Japan Foundrymen's Society, Journal), v. 32, Oct. 1960, p. 703-712.

Cast specimens treated with spheroidizing reagents such as pure Mg metal, calcium-silicide and mixtures of calcium-silicide and rare earth oxides are tested by ultrasonic inspection to determine the effect of these reagents on the volume and height of shrinkage voids and the damping properties of the castings. 7 ref. (S13g, Q8, 9-67; CI-r, 5)

100-S. (Czech.) Spectrograph Determination of Carbon in Steel. Vladimira Janosikova and Jan Chlebour. Hutnicke Listy, v. 15, Nov. 1960, p. 886-889.

Description of an apparatus which resolves C and Fe lines in the spectrum. Comparison of the results of spectrographic and chemical analyses. (S11k; ST, C)

101-S. (Czech.) Photometric Determination of Tin in Steel. Ivan Janousek and Karel Studlar. Hutnicke Listy, v. 15, Nov. 1960, p. 889-893.

Various carbon and alloy steels, cast iron and ferrochromium containing 0-0.044% Sn are analyzed by photometric determination after distillation and separation by ion exchange. 56 ref. (S11a; AD-n, AY, CI, CN, Sn)

102-S. (German.) Assessment of Testing Methods for Nonmetallic Inclusions in CK 22 Steel. Hans-Joachim Eckstein and Klaus Schneider. Neue Hutte, v. 5, Oct. 1960, p. 607-617.

Samples of electro-furnace melted and rolled CK 22 steel are tested and examined by magnetic particle, ultrasonic, microscopic and vacuum hot extraction methods, blue brittleness and deformation and pickling tests and extraction residues analysis. Correlation and evaluation of inclusion analysis efficiency. (S13, 9-69; ST-f)

103-S. Spectrographic Determination of Boron in Steel by Rotating Electrode Method. M. K. Ghose, S. Pait and B. C. Kar. NML Technical Journal (National Metallurgical Laboratory, India), v. 2, Aug. 1960, p. 12-14.

Boron in steel is detected up to a lower limit of 0.001% with an accuracy of ±5% using a rotating boron-free graphite disk as a lower electrode and a Hilger large quartz spectrograph. (S11k; ST, B)

104-S. Radiography of Large Solid Propellant Rocket Motors. Paper from "Symposium on Nondestructive Testing in the Missile Industry". American Society for Testing Materials, STP no. 278, p. 3-11.

Experimental data on the radiography of the Polaris motor. Discontinuities can be detected from 30-60 in. in diameter. 7 ref. (S13, T24e)

105-S. Mobile Field Testing of Missiles and Aircraft. A. Barath and D. J. Hagemaier. Paper from "Symposium on Nondestructive Testing in the Missile Industry". American Society for Testing Materials, STP no. 278, p. 12-19.

X-ray, ultrasonic, magnetic particle, penetrant and hardness testing of airframe and landing gear members. (S13, T24e)

106-S. Radiography of Weldments in Motion. W. C. Hitt and D. J. Hagemaier. Paper from "Symposium on Nondestructive Testing in the Missile Industry". American Society for Testing Materials, STP no. 278, p. 40-46.

In-motion X-ray techniques for the inspection of Al and steel weldments. Comparison of in-motion and conventional X-ray techniques. (S13e; 7-51)

107-S. Ultrasonic Inspection of Adhesive-Bonded Aluminum Sandwich Structures. Calvin C. Kammerer. Paper from "Symposium on Nondestructive Testing in the Missile Industry". American Society for Testing Materials, STP no. 278, p. 47-52.

Equipment and techniques for detection of flaws in missile rudder assemblies. (S13g; Al, 5-59)

108-S. Company Shop-Inspects Many Nuclear-Plant Pressure Vessels. Condenser, v. 13, Dec. 1960, p. 4-8.

Nondestructive testing by radiography, ultrasonics, dye penetration

and X-rays to determine the quality of welds in pressure vessels fabricated from steel plates. (S13, T26q; ST, 7-51)

109-S. Polarographic Determination of Niobium in Highly Alloyed Steels. D. J. Brindley. Analyst, v. 85, Dec. 1960, p. 877-883.

Method for determining up to 3% of Cb in stainless steel, 266 permanent magnet alloy and mild steel. Cb is separated by hydrolysis in the presence of sulphurous acid. Oxides are ignited and fused with KOH then the melt is extracted with dilute KOH solution, adjusted to pH 1.9 in the presence of EDTA and the polarographic wave of Cb determined by polarographic procedures. 19 ref. (S11m; CN, SS)

110-S. (Book.) Symposium on Nondestructive Testing in the Missile Industry. ASTM Special Technical Publication no. 278, 71 p. 1960. American Society for Testing Materials, 1916 Race St., Philadelphia 3, Pa. $2.

Papers presented at the 3rd Pacific Area National Meeting, ASTM, San Francisco, Calif., Oct. 12, 1959. Papers are abstracted separately. (S13, T24e)

111-S. Low-Level Radiochemical Separation of Manganese. J. M. Matusek, Jr., and T. T. Sugihara. Analytical Chemistry, v. 33, Jan. 1961, p. 35-36.

Mn-56, obtained as a beta-decay product of fission-product Cr-56, is extracted into nitrobenzene as tetraphenylarsonium permanganate and counted and determined as the dioxide. 13 ref. (S11f, S11q; Mn)

112-S. X-Ray Rayleigh Scattering Method for Determination of Uranium in Solution. J. C. McCue, L. L. Bird, C. A. Ziegler and J. J. O'Connor. Analytical Chemistry, v. 33, Jan. 1961, p. 41-43.

The technique is evaluated for the quantitative determination of uranium in dilute nitric acid solution. Effects of Fe and Al on accuracy of results. (S11q; U)

113-S. Spectrophotometric Determination of Niobium and Molybdenum With 8-Quinolinol in Uranium-Base Alloys. Kenji Motojima and Hiroshi Hashitani. Analytical Chemistry, v. 33, Jan. 1961, p. 48-52.

The quinolinolates are extracted into chloroform and measured spectrophotometrically. Extraction of uranium is prevented by a fluoride masking agent. Up to 5% Cb or Mo may be determined. (S11k; U-b, Cb, Mo)

114-S. New Rapid Method for the Determination of Nickel in Ferrous and Ferromagnetic Materials. C. L. Luke. Analytical Chemistry, v. 33, Jan. 1961, p. 96-98.

Ni is isolated by precipitation as the hexamminoperchlorate and titrated by the cyanide method. The sample must contain at least 10 milligrams of Ni and no more than 0.5 milligrams of Cu or 3 milligrams of Co. 3 ref. (S11j; Fe-b, Ni)

115-S. Flame Photometric Determination of Copper in Mineral Mixes. Ion Exchange Technique for Sample Preparation. W. G. Schrenk, Kenton Graber and Russell Johnson. Analytical Chemistry, v. 33, Jan. 1961, p. 106-108.

Anion exchange with controlled chloride concentrations in the feed and eluant solutions is used to quantitatively separate Cu from other ions. The resulting HCl acid solution of Cu can be used for flame photometry. 11 ref. (S11a; Cu)

116-S. Extraction of Zirconium With Di-n-Butyl Phosphate and Direct Determination in the Organic Phase With 1-(2-Pyridylazo)-2-Naphthal. Application to Fluoride Solutions. R. F. Rolf. Analytical Chemistry, v. 33, Jan. 1961, p. 125-128.

Al and Mg alloys containing microgram quantities of Zr are dissolved in a mixture of fluoboric and mineral acids. The fluoride is complexed with ammonium nitrate and the Zr extracted with di-n-butyl phosphate in chloroform. Addition of alcoholic 1-(2-pyridylazo)-2-naphthal to the Zr extract gives an intense red color which is measured spectrophotometrically. 19 ref. (S11k; Al-b, Mg-b, Zr)

117-S. (French.) Determination of Hydrogen, Oxygen and Nitrogen in Metals by Melting Under Reducing Conditions in Argon Atmosphere. J. Hancart and J. Marot. Revue de Metallurgie, v. 57, Oct. 1960, p. 911-917.

Apparatus and procedure for simultaneous determination of oxygen and

nitrogen combines extraction of gases during melting in argon atmosphere with gas chromatography. Apparatus is used which permits instant switch from analysis of these gases to determination of hydrogen in same specimen. 4 ref. (S11f, 1-53)

118-S. (French.) Application of Chromatography to the Analysis of Gas Mixtures Extracted From Metals by Vacuum Melting Under Reducing Conditions. C. Baque and L. Champeix. Revue de Metallurgie, v. 57, Oct. 1960, p. 919-923.

Determination of H_2, CO and N_2 by gas chromatography technique using a column containing Linde molecular sieves. Reproducibility of results, sensitivity and accuracy of method. 3 ref. (S11f, C25)

119-S. (French.) Determination of Nitrogen in Steels, Cast Irons and Ferroalloys. J. Calmettes and H. Guinot. Revue de Metallurgie, v. 57, Oct. 1960, p. 925-933.

Comparative study of wet and dry analysis methods shows that no single technique is generally applicable to determination of total hydrogen in all ferrous metals. Certain steels contain complex nitrides which do not respond to wet analysis except under limited conditions. 6 ref. (S11f; ST, CI, Fe-b, N)

120-S. Quality Control in the Wire Industry. E. F. Jubb. Wire Industry, v. 27, Nov. 1960, p. 1105-1107.

Statistical quality control of annealing, galvanizing and drawing during manufacture of wire. (S12, J23, L16, F28)

121-S. (English.) Autonomics--Problems and Experiences in Automatic Production Testing. G. Alexander Rankin. Materialprufung, v. 2, Nov. 20, 1960, p. 421-428.

Ultrasonic testing by portable probe units and a servo-operated mechanical scanning unit of light-alloy cast billets, notched steel plates and extruded high-temperature alloy parts. Effect of surface roughness of tested material on results. Scope and limitations of autosonic techniques. (S13g; ST, SGA-h; 4-52, 4-53, 4-58, 5)

122-S. (German.) Contribution to Quantitative Aluminum Analysis in Special Materials, Particularly in Magnetic Alloys. W. Dubel and W. Flurschutz. Chemische Technik, v. 12, Sept. 1960, p. 538-540.

Method and apparatus for quantitative separation of Al from other elements (except Ti, Zr, V) by acid (0.1n H_2SO_4) electrolysis with Hg cathode and Pt anode without mechanical stirring. Magnetic removal of non-amalgam forming ferromagnetic elements (Fe, Co, Ni, Cr, etc.). (S11f; SGA-n, Al)

123-S. (French.) Direct Analysis of Calcium and Magnesium in the Presence of Iron, Aluminum and Titanium. Z. Zalessky, J. Debras-Guedon and I. A. Voinovtich. Analytica Chimica Acta, v. 23, Dec. 1960, p. 523-530.

Volumetric determination of Ca and Mg using Complexon III as the titrating agent. Calcium and Eriochrome black are used as indicators. 14 ref. (S11j; Ca, Mg)

124-S. The Gravimetric Determination of Cadmium With the Sodium Salt of 1-Phenyl-Tetrazoline-5-Thione. Carl E. Moore and Thomas A. Robinson. Analytica Chimica Acta, v. 23, Dec. 1960, p. 533-537.

Determination of Cd using aqueous 5% and saturated solutions of the reagent to produce a crystalline precipitate. Effect of pH and cation contamination on the accuracy of the results. 5 ref. (S11b; Cd)

125-S. Spectrophotometric Determination of Chromium (III) With EDTA. G. Den Boef, W. J. DeJong, G. C. Krijn and H. Poppe. Analytica Chimica Acta, v. 23, Dec. 1960, p. 557-564.

Determination of Cr by a method based on complexing of Cr (III) in aqueous solution. 10 ref. (S11a; Cr)

126-S. (French.) Polarographic Study of Bivalent Germanium. GH. Sauvenier and G. Duyckaerts. Analytica Chimica Acta, v. 23, Dec. 1960, p. 569-574.

Oxidation and reduction waves of Ge (II) in hypophosphorous and oxalic acid are related to pH and concentration. 7 ref. (S11n; Ge)

127-S. (French.) Macro and Microanalysis of Cobalt Traces. Spectrophotometric and Polarographic Analysis of Cobalt in MA 2B Alloy. D. Monnier, W. Haerdi and J. Vogel. Analytica Chimica Acta, v. 23, Dec. 1960, p. 577-584.

Determination of Co in 18-8 stainless steel by a process in which Fe is removed by solvent extraction and Co separated by an ion-exchange resin. 9 ref. (S11a, S11m; SS, Co)

128-S. (Czech.) Rapid Determination of Silicon in Gray Cast Iron Melted in an Arc Furnace. Milan Brhel and Drahomir Vlach. Slevarenstvi, v. 8, Nov. 1960, p. 400-401.

A wedge-shaped test piece is cast. After volumetric determination of carbon content in shavings cut from the wedge, the height of the hardened portion is measured. Si is determined from this height and the carbon content. (S11j; CI-n, Si, 5)

129-S. Monitor for the Quantitative Determination of Beryllium in the Atmosphere. M. S. W. Webb, R. J. Webb and P. C. Wildy. Journal of Scientific Instruments, v. 37, Dec. 1960, p. 466-471.

Direct spectrophotometric method for analyzing Be in industrial atmospheres using a device in which air is drawn through a triggered intermittent arc and the intensity of the Be doublet is monitored. Accuracy and sensitivity are unaffected by chemical form of Be and particle size. (S11a, X7j; RM-g30, Be)

130-S. British Magnesium Alloys. Metal Progress, v. 79, Jan. 1961, p. 100-B.

Data sheet showing British specifications, approximate American equivalents, typical compositions, typical mechanical properties and general descriptions. (S22; Mg-b)

131-S. (German.) Contribution to Isolation and Analysis of Oxide Inclusions. Siegfried Meyer and Othmar G. Koch. Archiv fur das Eisenhuttenwesen, v. 31, Nov. 1960, p. 651-657.

Electrolytic oxide isolation without protective atmosphere for unalloyed steels by ion exchanger, by covering of electrolyte to keep off air and by addition of reducing agents (hydrazin sulphate) with emphasis on latter method. Treatment of anodic residues by Cl and analysis of oxide inclusions by microchemical and spectrographic methods. (S11f, 9-69; ST)

132-S. Spectrum Analysis. Iron & Coal Trades Review, v. 181, Dec. 23, 1960, p. 1355-1358.

A Baird-Atomic direct reading spectrometer is used to obtain quick and accurate analysis of samples of Fe and of slag from a cupola-converter steelworks. (S11a, E10a; Fe, RM-q)

133-S. Radiographic Standards to be Developed for Thin-Section Castings. Materials in Design Engineering, v. 53, Jan. 1961, p. 11.

Production of 4130, 4140, 4330 and 4340 alloy steel and 347 L, 410, 430, 17-4 PH stainless steel castings containing only one of the following defects: inclusions, cold shut, shrinkage cracks, porosity, hot tears and misruns. The castings are to be used as reference radiographs in future testing. (S13e; AY, SS, 5)

134-S. X-Ray Inspection of Hot Steel Billets During Rolling. W. J. Oosterkomp, J. Proper and M. C. Teves. Metallurgia, v. 62, Dec. 1960, p. 257-260.

Steel billets are examined for cavities and inclusions using X-rays with images appearing on a cloud circuit television system. 50% of all 3 mm. thick holes are detected and 90% of all mm. holes. (S13e; ST, 4-52)

135-S. (Russian.) Phase Analysis of Low Carbon Steels Containing Columbium. Yu. A. Klyachko, M. M. Shapiro and E. F. Yakovleva. Zavodskaya Laboratoriya, Nov. 1960, p. 1219-1223.

Chemical analysis of a nitrocarbide phase isolated by anodic dissolution of low carbon nitrided steel containing Cb using electrolytes containing 15% NaCl and 2.5% tartaric acid, as well as waterless solutions of 50 ml. HCl and 1150 ml. methyl alcohol. 8 ref. (S11; CN-g, Cb, 14-68)

136-S. (Russian.) Ultrasonic Control of Frame Structures. B. M. Petrov, A. I. Safonov and F. Ya. Zaslavskii. Zavodskaya Laboratoriya, Nov. 1960, p. 1241-1244.

Parameters for ultrasonic detection of nonfusion defects, slag inclusions, gaseous pores and transversal and longitudinal cracks in weldments of 15 to 30 mm. thickness. Comparison to radiographic methods for economy. (S13g; 7-51)

137-S. Activation Analysis of Minor Constituents in High Alloy Steels. J.

Hoste. Pure and Applied Chemistry, v. 1, Jan. 1960, p. 99-110.

Discussion of the importance of activation analysis, not only in determining trace elements but in accurately measuring the concentrations of minor constituents in complex materials. Samples of N. B. S. steels 101D, 123B, 132A, 153, 155, 161 and 167 are activated with neutrons in an Amsterdam cyclotron analyzed for V, Mn, Cr, W and Ni isotopes. 4 ref. (S11q; SS, Cr, Mn, Ni, V, W)

138-S. Activation and Deactivation Studies With Copper on Sphalerite. A. M. Gaudin, D. W. Fuerstenau and G. W. Mao. American Institute of Mining, Metallurgical and Petroleum Engineers, Transactions, v. 214, 1959, p. 430-436.

Chemical exchange of Cu^{++} for Zn^{++} in the sphalerite lattice during activation and sequestering of Cu ions in solution during deactivation as determined by radioactive tracer studies, using Cu 64 and C 14, with various complexing agents, at room temperature. 19 ref. (S11q, 1-59; RM-n, Zn)

139-S. Fabrication and Working of the Vacuum Fusion Apparatus for the Determination of Gases in Metals and Alloys. N. G. Banerjee. NML Technical Journal (National Metallurgical Laboratory, India), v. 2, Nov. 1960, p. 10-14.

Gas collection and analysis using Ambler's apparatus and vacuum fusion apparatus made up of a mercury diffusion pump, generator set and toepler pump. Data are given for breakdown of gases in Cu, Ni-free stainless steel, Ni castings and depolarized Ni. (S11r; Cu, Ni-b)

140-S. (German.) New German Standards on Surface Roughness and Their Effects on Surface Measurement. Herbert von Weingraber. Stahl und Eisen, v. 80, Dec. 22, 1960, p. 1933-1939.

Explanation of the new standards DIN 4760, DIN 4762 and DIN 4763 in which reference profiles rather than the line of arithmetic mean are used as reference systems for defining surface roughness. Graphical evaluation of roughness according to the new standards. Suggestions for development of significant testing machines. (S15, 15-56)

141-S. A Summary of the Characteristics of Structural Steels. Nathan W. Morgan. Welding Fabrication and Design, v. 4, Dec. 1960, p. 17-19, 21-23.

Standards and specifications of structural steels for bridges, buildings and fasteners. Data are given for high strength, low-alloy steels, Mn, Si and Ni steels and quenched and tempered high strength steels. (S22; ST, SGB-s)

142-S. (Japanese.) Determination of Platinum and Palladium in High Purity Gold. Masuo Miyamoto. Japan Analyst, v. 9, Nov. 1960, p. 925-929.

Spectrophotometric determination of trace impurities in Au by dissolution of the specimen in aqua regia and hydrobromic acid, extraction of the Au with isopropyl ether and extraction of Pd with dimethyl-glyoximine-chloroform. Pan reagent is used for determining Pd, with the dithizone method being used for Pt. 5 ref. (S11a; Au, Pd, Pt)

143-S. (Japanese.) Rapid Determination of Carbon and Sulphur in Nickel-Copper Alloy by the High Frequency Combustion Method. Shikao Hashimoto and Reizi Tanaka. Sumitomo Light Metals, Technical Reports, v. 1, Oct. 1960, p. 254-259.

Samples are burned in pure O, with pure Fe and Sn as fluxes, with the dioxides of S and C being separated. Carbon is determined by weighing and S by titration. Analytical accuracy and speed of the method is compared to electrical resistance furnace heating methods. 6 ref. (S11g; Ni-b, Cu-b, C, S)

144-S. Investigations on "Active Iron". Pt. 2. Techniques Used in Studying Reactivity. G. V. L. N. Murty and T. R. Ramaswami. Metallurgia, v. 62, Nov. 1960, p. 207-209.

Design of an apparatus in which active Fe, in the form of a deposit on a metal foil, can be made to react with water or a solution of sodium citrate and the evolved gases accurately measured at atmospheric pressure. A rapid dichomate method is used for the volumetric determination in the presence of a large excess of sodium citrate. (S11j; Fe)

145-S. Why Nondestructive Testing Is Needed. Robert C. McMaster. Metal Progress, v. 79, Feb. 1961, p. 70-75.

The constant increase in competition coupled with the growing demand for quality has caused manufacturing industries to concentrate on nondestructive testing as a means for reducing waste and improving reliability. A number of the general aspects, including both production and economic standpoints, to be considered in applying such testing are discussed in the article. (S13)

146-S. Defects That Nondestructive Tests Can Find. Metal Progress, v. 79, Feb. 1961, p. 76-79.

A group of pictures illustrates the wide variety of flaws which can be found in a product before it goes into service. (S13)

147-S. X-Ray Machine Does Double Duty at Clinic. Ed Howard. Western Metalworking, v. 19, Jan. 1961, p. 26-27.

Defects in steel aircraft and missile parts and castings are located radiographically using X-rays from a 2 Mev. Van de Graaf belonging to a cancer center. (S13e, T24; ST, 5)

148-S. Sampling Metals and Residues. F. L. Jameson. Metal Industry, v. 98, Jan. 13, 1961, p. 28-29.

Sampling of deliquescent materials such as Monel, stainless steel, nonferfous ingots, and Sn, Pb and Zn residues. Sample is weighed, heated with a boiling saturated solution of soda ash, dried and then ground to produce an homogenous fine. (S12h; Ni-b, Pb, Sn, SS, Zn)

149-S. (Japanese.) Proceedings of the Plating Section of the JIS. Matsuhei Kishi. Metal Finishing Society of Japan, Journal, v. 11, Oct. 1960, p. 454-456.

Japanese Industrial Standard specifications for Ni, Cr, Ag, Cd, Zn and hard Cr platings. (S22; Ag, Cd, Cr, Ni, Zn, 8-62)

150-S. (German.) Spark Excitation. Pt. 7. K. Zimmer and T. Torok. Acta Chimica, v. 24, Jan. 1960, p. 1-16.

Apparatus and method for spectrographic analysis of liquid (800° C.) and solid Al alloys with influence of diffusion effects and structure of specimen on spark excitation being eliminated. (S11k, S10n; Al-b)

151-S. Sampling of Liquid Metals. Thomas B. King. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 3-18.

Techniques for sampling liquid metals for gas analysis, with particular attention given to sampling liquid steel from industrial furnaces for hydrogen with evacuated glass tubes. A modified bomb method is found to be best for oxygen samples. 46 ref. (S12h; ST)

152-S. The Determination of Oxygen in Metals. W. T. Elwell. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 19-42.

Review of vacuum fusion, inert-gas fusion, chemical and physical procedures for determining oxygen in steel, Mo, Zr and other metals. Sampling methods for solid and liquid materials. 129 ref. (S11r; Mo, ST, Zr, O)

153-S. The Determination of Gases in Metals by Vacuum Fusion. J. E. Still. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 43-63.

Gas contents of Ti, Zr, Mo and Be are determined by vacuum fusion, using both Fe and Pt baths. (S11r, C25; Be, Mo, Ti, Zr)

154-S. The Determination of Gases in Metals by the Semi-Micro Vacuum Fusion Technique. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 64-74.

Determination of oxygen, nitrogen and hydrogen in Cb, Ta, Ti, Th, U, V, Zr, Zircaloy-2 and Be by a semi-micro vacuum-fusion technique using Pt and Fe as bath materials. 7 ref. (S11r, C25; Cb, Ta, Th, Ti, U, V, Zr)

155-S. An Assessment of Carrier-Gas Methods for the Determination of Gases in Metals With Particular Reference to Steel. C. E. A. Shanahan. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 75-92.

Advantages of using carrier gas techniques instead of vacuum extraction procedures for determination of

O, N and H in metals, with particular emphasis on Fe and steel. Comparison of reactive and unreactive carrier gas methods. 31 ref. (S11r; Fe, ST, H, N, O)

156-S. The Determination of Oxygen in Beryllium by Activation Analysis. R. F. Coleman. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 93-102.

Be samples are irradiated in a flux of atomic particles to form unstable radioactive isotopes which decay at a characteristic rate. Activity is proportional to the amount of oxygen in the sample. 5 ref. (S11q, S11r; Be, O)

157-S. Emission Spectrometric Determination of Oxygen, Nitrogen and Hydrogen in Metals. Velmer A. Fassel. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 103-120.

Description of analysis techniques based on melting the metal and extracting the gaseous elements with a d-c. carbon arc discharge in pure argon. Emission spectra of the extracted gases are excited with the same arc discharge. Results are given for steel, V, Ti and other metals. 9 ref. (S11r; ST, Ti, V, H, N, O)

158-S. The Determination of Oxygen and Nitrogen in Iron and Steel by an Isotope-Dilution Method. M. L. Pearce and C. R. Masson. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 121-132.

Isotope-dilution and vacuum fusion analyses are compared. Evidence is presented to show that vacuum fusion results may be too low because of retention of gas in the colder parts of the furnace assembly. 11 ref. (S11r, 1-59; Fe, ST, N, O)

159-S. The Determination of Nitrogen in Metals. J. D. Hobson. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 151-182.

Review of chemical methods for the determination of nitrogen in steel and other metals which depend on conversion to ammonia and of alternative methods which are modifications of the Dumas combustion technique used with organic compounds. 163 ref. (S11r; ST, N)

160-S. Determination of Nitrides in Metals. H. F. Beeghly. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 183-191.

Analysis of tool, die and alloy steels and Cb, Al, V and Zr alloys for nitrides using ester-halogen reagents or aqueous acids to dissolve the matrix. Effect of thermal treatment on the amount of nitride recoverable. (S11r; AY, Al-b, Cb-b, TS, V-b, Zr-b, N)

161-S. The Determination of Hydrogen in Metals. R. Eborall. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 192-218.

Review of vacuum hot extraction, combustion and equilibration methods of gas analysis. Sampling and handling procedures for steel, Al, Cu and their alloys, Ti and Zr. 114 ref. (S11r; Al-b, Cu-b, ST, Ti, Zr, H)

162-S. The Determination of Hydrogen in Cast Iron. J. V. Dawson. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 219-228.

Determination of hydrogen content by the hot extraction process at 1070° C., using chill cast samples of Fe. Extracted gases are pumped into a known collecting volume and divided into two sections by a heated Pd thimble. Partial pressure of hydrogen in the section is measured by McLeod and Pirani gages. 5 ref. (S11r; CI, H)

163-S. An Improved Carrier-Gas Technique for the Determination of Hydrogen in Steel. F. R. Coe and N. Jenkins. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 229-235.

Small amounts of hydrogen from steel are detected in a high purity argon stream using a thermal conductivity cell and a carrier gas technique. System is calibrated with a simple burette which injects accurately measured volumes of hydrogen into the Ar stream, the resulting peak areas being measured with a planimeter. (S11r; ST, H)

164-S. X-Ray Emission Analysis and the Determination of Gases in Metals. T. Mulvey. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 255-269.

Review of electron-probe methods of exciting the spectra of the light elements and comparison of this method with others of high mass sensitivity. Description of improvements in the design of the X-ray analyzer and in the technique of microanalysis. Application to analysis of Fe alloys for C, H and O. 43 ref. (S11r, S11p; Fe-b, C, H, O)

165-S. Application of Internal Friction Measurements to the Study of Gases in Metals. G. M. Leak. Paper from "Determination of Gases in Metals". Iron and Steel Institute, London, England. 1960, p. 270-295.

Review of the damping mechanism and methods of measuring it with the torsion pendulum. Results are discussed for nitrogen in Fe, Si-Fe-N alloys and hydrogen in Fe. 55 ref. (S11r; Fe-b, H, N)

166-S. Two-Color Electronic Systems for Metallurgical Pyrometry in the Infrared Region of the Spectrum. D. Ya. Svet. Paper from "Contemporary Problems of Metallurgy". Consultants Bureau, Inc., New York, 1960, p. 323-327.

Application of spectral-ratio pyrometer-regulator system using Ge photodiodes to measure color temperature of metals. Measurement of spectral distribution of the missivity of Ag, Cu, Co, Fe and Ni. 5 ref. (S16, X9r, 17-57; Ag, Co, Cu, Fe, Ni)

167-S. (Translation-ConBur.) The Removal of Gases From Electrolytic Nickel. A. L. Rotinyan and E. Sh. Ioffe. Journal of Applied Chemistry of the USSR., v. 33, Feb. 1960, p. 358-363.

Results of experiments on the vacuum extraction of gases from electrolytic Ni, with data for determination of amounts of C, H_2 and O_2 in the metal when obtained at different pH values. Theory is presented to explain the lack of dependence between the mechanical properties of the deposit and the amount of gaseous hydrogen. 12 ref. (S11r, Q-general, 2-60; Ni, C, H, O)

168-S. (Translation.) Chromatographic Purification of Technetium. A. F. Kuzina and Vikt. I. Spitsyn. Russian Journal of Inorganic Chemistry, v. 5, May 1960, p. 482-486.

Purification of Tc concentrates isolated from molybdic oxide after irradiation with neutrons. Radioactive and stable impurities are removed from nitric acid solutions on cation exchange resins. (S11f; Tc)

169-S. (Translation.) Determination of Gold and Platinum Metals in Refined Silver and Cathode Nickel by Means of the Radioactivation Method. O. E. Zvyagintsev and A. I. Kulak. Journal of Inorganic Chemistry, USSR., v. 2, 1957, p. 376-384.

Technique for determination of Au, Pt, Pd and Ir by the radioactivation method using isotope carriers to chemically separate the elements. 16 ref. (S11q; Ag, Ni, Au, Pt)

170-S. Resonance Testing Without Contact. Robert V. Harris. Ultrasonic News, v. 4, Winter 1960, p. 10-11, 14-15.

Inspection and measurement of the ultrasonic resonance thickness of Zircaloy, Cu, Al, steel, Pb, glass and plastic by combined immersion and pulse echo testing techniques. (S14g; Al, Cu, Pb, ST, NM-f42, NM-d30)

171-S. (German.) Photometric Determination of Traces of Lead in Iron and Steel. Siegfried Meyer and Othmar G. Koch. Archiv fur das Eisenhuttenwesen, v. 31, Dec. 1960, p. 711-715.

Separation of 0.0001-0.05% Pb from iron and steel by first extracting Fe with diethyl or di-isopropyl ether, adding ammoniacal KCN and citrate to the remaining solution and extracting Pb with dithizon and chloroform. Pb is then determined by photometry. (S11a; Fe, ST, Pb)

172-S. (German.) Investigation on the Significance of Sulphur Analysis of Iron Works Products for Various Combustion Methods. Dagmar Blazejak-Ditges. Archiv fur das Eisenhuttenwesen, v. 31, Dec. 1960, p. 717-722.

Combination of combustion methods of Pontet and Boulin and of Schmidts and Baasch to a simple combustion method in which reaction gases are obtained by suction and titrated NaOH to determine absolute sulphur content. Application to pure chemicals, steels, ores, slags, pig and cast iron. (S11g; Fe, ST, S)

173-S. (French.) Determination of Oxygen in Liquid Basic Bessemer Steels. Techniques for Taking Liquid Specimens and Gas

Analysis. J. Marot and I. Harveng. Revue de Metallurgie, v. 57, Nov. 1960, p. 991-997.

Comparison of ladle, bomb and mold methods for sampling melts and of chemical methods for the determination of oxygen in the samples. 8 ref. (S11r, D9; ST-g, O)

174-S. (German.) Measurements on Metal Surfaces by Electrochemical Probes and Applications to the Detection of Structural Inhomogeneities. Ch. Ilschner-Gensch. Technische Mitteilungen Krupp, v. 18, Aug. 1960, p. 29-36.

Electrolytic potential distribution measurements of inhomogeneities in the surface of Cu-Zn and Ni/Ni-Cr alloy inclusion specimens and welded seams in ferritic Cr steels. Comparison of results obtained in stabilized, unstabilized and heat treated, desensitized steel. 20 ref. (S13a, 9-69; Cu-b, Zn, Ni-b, Cr, ST, 7-51)

175-S. Ultrasonic Inspection of Submarine Steel Weldments. N. A. Sinclair and M. M. Nanda. Nondestructive Testing, v. 19, Jan-Feb. 1961, p. 58-64.

Inspection procedures on prepared defective test steel weldments are contrasted with radiographic inspection methods. Techniques and acceptance-rejection standards are established for longitudinal crack detection only. (S13g; ST, 7-51)

176-S. Magnetic Particle Inspection at Regular Intervals Can Prevent Major Trouble. Sam Vance. Pipe Line Industry, v. 14, Feb. 1961, p. 30-32.

Magnetizable castings such as turbine blades and valve bodies are inspected for flaws using Fe magnetic particles, dry powder being recommended for welds, castings and fittings and fluorescent magnetic particles for small defects. (S13j, T7h; SGA-n, 5)

177-S. Neutron Activation Methods for the Study of Multicomponent Diffusion and for the Determination of Thermodynamic Activities of Alloys. J. S. Kirkaldy, G. R. Mason and W. J. Slater. Canadian Mining and Metallurgical Bulletin, v. 54, Jan. 1961, p. 59-66.

Activation analysis techniques for determining Cu and Mn in 10 mg. samples machined from Al-base diffusion in the Al-Cu-Mn system. Thermodynamic activity of Al-Zn alloys is determined at 550° C. by neutron irradiation and analysis of the resulting gamma ray spectrum. (S11q, N1a, P12; Al-b, Cu, Mn, Zn)

178-S. Investigational Techniques. D. A. Ryder. Metal Industry, v. 98, Jan. 21, 1961, p. 66-68.

Application of fractography and electron micrography to the investigation of metallurgical failure in aircraft. Fatigue fracture, ductile tensile fracture and geometry of fracture for DTD683 Al-Zn-Mg alloy and cast Al-Si-Cu alloy. 12 ref. (S13b, Q26r, M21e, T24; Al-b)

179-S. Spectrophotometric Determination of Trace Amounts of Copper in Tungsten Metal Powder. A. S. Prokopovitsh. and T. E. Green. U. S. Bureau of Mines, Report of Investigations 5720, 1960, p. 7.

Outline of a method based on solvent extraction in which Cu is dissolved in H_2O_2, complexed with neocuproine and extracted into chloroform. Absorbance of the separated $CHCl_3$ layer is measured on a spectrophotometer. 5 ref. (S11a; W, Cu, 6-68)

180-S. Future Requirements of the Tinplate Industry. C. E. Sutton. Paper from "Production of Wide Steel Strip". Iron and Steel Institute, London England. May 1960, p. 3-8.

Required mechanical properties, uniformity of surface behavior and corrosion resistance of electrolytic and hot dipped tinplate. Comparison with Al, plastic, cardboard and glass in canning applications. (S22, Q-general, R7; ST, Sn, 4-53, 8)

181-S. Future Requirements of the Motor-Car Body Industry. W. E. Lambourn. Paper from "Production of Wide Steel Strip". Iron and Steel Institute, London, England, May 1960, p. 9-17.

Quality, ductility, surface structure, mechanical properties and weldability requirements for sheet, strip and coil steel for production of automobile bodies. (S22, Q-general, K9s, T21a; ST, 4-53)

182-S. (French.) Roughness Produced During Finishing. Cayere. Machine Moderne, v. 54, Dec. 1960, p. 25-34.

Microsurface roughness produced on test plates and diesel engine pistons

of hard quenched steel by polishing and wear by commercial beads. Effect of filtering the wetting liquid during finishing on surface properties. (S15, L10, T7; ST)

183-S. Spectrographic Method for the Quantitative Determination of Low Concentration Impurities in High-Purity Fine Silver. A. J. Lincoln and J. Kohler. Engelhard Industries, Inc., Technical Bulletin, v. 1, Dec. 1960, p. 103-105.

Application of the Stallwood jet technique with an argon atmosphere to the spectrographic determination of Cu, Pb, Sn, Ni, Cr, Mn, Pd, Bi, Ca, Mg, Al, Cd, Fe, Sn, Sb, Ir, Av, Rh, Pt, Ru, Si and B in the concentration range of 0.1-100 ppm. (S11k; Ag)

184-S. (Japanese.) Determination of Alloying Elements in Special Steels by X-Ray Fluorescent Spectroscopy. Pt. 1. X-Ray Fluorescent Analysis of Nickel and Chromium in Nickel-Chromium Steel and Tungsten in Tungsten Steel. Kichinosuke Hirokawa. Japan Institute of Metals, Journal, v. 24, Nov. 1960, p. 692-696.

Calibration curves are determined for standard samples in the binary systems Fe-W containing 0.46-28.38% W, FeCr containing 0.35-99.9% Cr and Fe-Ni containing 10.97-99.9% Ni using the metals of the sample holder as the compensative reference. Comparative data with chemical analysis are presented, with effects of interference elements on the analytical result. 12 ref. (S11p, 2-60; ST, Cr-b, Ni-b, W)

185-S. (Japanese.) Determination of Alloying Elements in Special Steels by X-Ray Fluorescent Spectroscopy. Pt. 2. An Attempt to Estimate the Influence of Coexisting Elements in X-Ray Fluorescent Spectroscopy. Kichinosuke Hirokawa. Japan Institute of Metals, Journal, v. 24, Nov. 1960, p. 696-699.

Calibration curves are calculated for Ni and Cr in 20-25 stainless steels and for Cu in 75% Cu-Zn alloy. Approximate equations are derived for Fe and Zn influence on the analytical result. 6 ref. (S11p, 2-60; SS, Ni, Cr, Cu-b, Zn)

186-S. (Japanese.) Eddy-Current Testing of Tensile Deformed Thin Tube of Some Austenitic Stainless Steels. Tatsuo Maekawa, Michio Mizuto and Katsumi Ishihara. Japan Institute of Metals, Journal, v. 24, Nov. 1960, p. 714-718.

Changes and recovery in the current flowing in an annular coil (7 kc.) on 304 stainless specimens after annealing and solution treatment at 300-1050° and after elongation. Austenite phase instability and ferrite phase precipitation, with consequent electrical resistivity and magnetic property change as a result of annealing and deformation, are governing factors in the process. 4 ref. (S13h, P15g, P16, N8, 2-64, 3-68; SS-e, 4-60)

187-S. (Japanese.) Spectrographic Determination of Impurities in Crude Copper. Kamihiko Itsuki, Fukunosuki Suzuki and Kazuo Nishimo. Japan Institute of Metals, Journal, v. 24, Nov. 1960, p. 718-722.

Determination of Al, As, Bi, Fe, Ni, Pb, Sb, Sn and Te in acid dissolved specimens converted to cupric oxide, powdered and mixed with graphite into a graphite electrode with excitation by d-c. arc and uniarc methods. Calibration curves are compared with analytical results using a-c. polarography. 18 ref. (S11c, 3-69; Cu)

188-S. Effect of Take-Off Angle on Electron Probe Calibration. L. S. Birks and R. E. Seebold. Report of NRL (Naval Research Laboratory) Progress, Jan. 1961, p. 16-20.

Calibration curves are prepared for specimens in the Ni-Fe and Ni-Cr at 6, 20 and 90° take-off angle (the angle between the emerging X-rays and the specimen surface) using a calculation method and 100% standards. Measured X-ray intensity is influenced by matrix absorption as a function of the take-off angle leading to deviation in the X-ray intensity versus composition curve. 3 ref. (S11e; Ni-b, Cr, Fe)

189-S. (Book.) Determination of Sub-Microgram Amounts of Cadmium in Super-Pure Zinc by Neutron Activation Analysis. D. Gibbons. International Symposium on Microchemistry, Proceedings, Symposium Publications Div., Pergamon Press, London, 1960, p. 332-335.

Method is developed for radiochemical purification of Cd in irradiated Zn and applied to determination of Cd in high purity zone-refined Zn by activation analysis. 5 ref. (S11q; Zn, Cd)

190-S. Electron Accelerators for Site Radiography. Sidney Hollands. Nuclear Power, Feb. 1961, p. 69-71.

Radiographic inspection of butt welds in nuclear reactor pressure vessels built of steel plates 2-4 1/2 in. thick. High energy radiation either from Co^{60} or from special X-ray machines (linear accelerator or betatron) is necessary to inspect plates thicker than 3 in. 4 ref. (S13e, X8, 1-52, T26q; ST, 7-51)

191-S. Mobile Linear Accelerator Probes Big Welds. Metalworking Production, v. 105, Feb. 1, 1961, p. 63-64.

High intensity X-ray examination of welded steel pressure vessels for reactor cores using a 4.3 Mev linear accelerator with the vacuum and cooling systems incorporated in the acceleration unit. (S13e, T26q; ST, 7-51)

192-S. Nondestructive Testing of Pressure Vessels. John Battema. Canadian Welder, v. 52, Feb. 1961, p. 10-16.

A survey of nondestructive inspection procedures for welded pressure vessels which includes the functional applications of air and water testing; magnetic particle, X-ray and isotope radiation; dye and fluorescent penetrant; and ultrasonic methods. (S13, T26q, 10-54; 7-51)

193-S. (Japanese.) Determination of Hydrogen in Cast Iron. Pt. 2. Extraction Temperature of Hydrogen From White and High-Silicon Cast Iron. Eiichi Kato. Japan Institute of Metals, Journal, v. 24, Dec. 1960, p. 794-797.

Hydrogen volume and evolution rate as a function of temperature at 1000-1650° C. and time are measured for a white iron and for cast iron specimens containing up to 14% Si using a Pd tube apparatus with vacuum heating. 5 ref. (S11r, 1-73; CI, H)

194-S. (Japanese.) Spectrographic Determination of Microamount of Calcium and Magnesium in Cast Iron With a Porous-Cup Electrode. Yu Yokoyama. Japan Institute of Metals, Journal, v. 24, Dec. 1960, p. 802-805.

Specimens containing 0.006-0.15% Ca and 0.004-0.025% Mg are dissolved in HCl and HNO_3, with Fe extraction by methyl-isobutyl-ketone. A condensed spark is used to excite the Ca and Mg containing solution in a porous cup electrode, using Sr and Be as internal standards for Ca and Mg, respectively. Calibration curves are compared with flame photometry and Ti yellow analysis. 3 ref. (S11c; CI, Ca, Mg)

195-S. (Japanese.) Electrolytic Isolation of Sulphides From Iron and Steel. Hideo Kaneko, Taiji Nishizawa and Koreaki Tamaki. Japan Institute of Metals, Journal, v. 24, Dec. 1960, p. 837-841.

Investigation of process variables for electrolytic isolation of sulphide from low carbon alloy steels using sodium citrate and hydrochloric acid cells. Application to isolation of MnS, FeS, ZrS, Vs, TiS, CbS, CrS and Al_2S_3. Microphotographic examination of the steel and the extracted sulphides. 9 ref. (S11f, M-general; ST, 14-68)

196-S. Welding Aluminum. Pt. 10. Quality Control. Modern Metals, v. 17, Feb. 1961, p. 58, 60, 62-63.

Destructive and nondestructive testing and inspection methods for the detection and control of weld defects in Al. (S13; Al, 7-51)

197-S. (Japanese.) Ultrasonic Inspection in Steel Industries. Ryoh Takaoki. Ohm, v. 47, Nov. 1960, p. 167-173.

Ni-Mo-V steel or Cr-Mo-V steel rotor, high carbon Cr-steel roll, cast iron roll and steel bloom are subjected to ultrasonic flaw detection to determine amount of segregation, slag inclusion, impurities, cracking, shrinkage, shrinkage cavity, lattice defect and flake and residual stress. (S13g; CI, CN, ST)

198-S. Inspecting Jet Engine Parts With Eddy Currents. R. L. Lipe. Metal Progress, v. 79, Mar. 1961, p. 129-131.

Periodically, turbine wheels in jet engines have broken, resulting in accidents costly in both aircraft and lives. The need for a test which can detect defects at the operating base level before they cause such failures has been met by the portable eddy current tester. (S13h, Q3q, T7h)

199-S. Immersion Ultrasonic Inspection Used to Check Steel Plant Products. Iron and Steel Engineer, v. 38, Feb. 1961, p. 141-142.

Comparison of immersion technique and contact method for ultrasonic inspection of forging squares, round bars

and seamless stainless steel tubing. (S13g; SS, 4-51, 4-55, 4-60)

200-S. (Translation-Brutcher no. 4936.) Extraction of Nonmetallic Inclusions From Rimmed-Steel Ingots. Y. Shimokawa. Tetsu-to-Hagane, v. 46, Mar. 1960, p. 153-155.

Study of three procedures for the extraction of nonmetallic inclusions from rimmed-steel ingots. Electrolysis and elutriation method; outward appearance of inclusions extracted; their distribution throughout the ingot; relationship between amount of spherical inclusions and quantity of Al added for deoxidation; minimum size; components. (S11; ST, 9-69)

201-S. (Translation-Brutcher no. 5021.) Sampling and Determination of Hydrogen in Steel. A. Stettner. Stahl und Eisen, v. 79, no. 15, 1959, p. 1087-1090.

The taking of samples for hydrogen determination by suction--with or without collection of the gases evolving during the process and by casting the metal into test molds. (S11; ST, H)

202-S. (Book.) Ferrous Metals (Specifications), Pt. 1. 1960 Supplement. 444 p. American Society for Testing Materials, 1916 Race St., Philadelphia 3, Pa.

Revised standards and specifications for steel piping materials, steel flats and structurals; bars, bolts, forgings, rails, castings and other steel products; metallic coated steel products and wrought and cast iron. (S22; Fe, ST)

203-S. The Determination of Gases in Metals. G. A. Picklo, Jr. Report of NRL (Naval Research Laboratory) Progress, Feb. 1961, p. 1-13. (Available as PB171315 from U. S. Office of Technical Services, Washington 25, D. C.)

Survey of developments in wet chemical, hot extraction, vacuum fusion and spectrographic methods for determining gas content and nature of reaction with metals, with attention to release of entrapped gases without contamination. Influence of traces of gaseous impurities such as O, N and H on physical and mechanical properties of alloys. Application to carbon and stainless steels and light, refractory and rare earth metals and alloys. 15 ref. (S11r, 1-73, N15, Q-general; ST, EG-a38, EG-d37)

204-S. Corrosion Mechanisms (Effect of Interference Elements on the Determination of Ferrous Iron in Iron Compounds). L. J. Clark. Report of NRL (Naval Research Laboratory) Progress, Feb. 1961, p. 35-36. (Available as PB171315 from U. S. Office of Technical Services, Washington 25, D. C.)

Varying amounts of Cr, Mn, Ni, Co, Mo, Cu, Ti, V and Zr ions are added to solutions containing high proportions of a ferric iron, maghemite, which contains in turn 2.12% ferrous iron, to determine the interference of the metallic ions on the colorimetric determination of ferrous iron, both as a function of chemical similarity and effect on the oxidation-reduction equilibrium of the solution. (S11a, R-general; Fe)

205-S. Design Guides for Pressure Tight Gray Iron Castings. Charles F. Walton. Machine Design, v. 33, Mar. 16, 1961, p. 162-164.

Design considerations for factors such as nonporosity, soundness, strength, machinability and rigidity which make gray iron suitable for pressure tight applications. Minimum tensile strength, Bhn hardness and typical applications of A48-60T, A159-58 and A278-59T gray irons. (S22, E25, G17k, Q-general; CI-n, 5)

206-S. (Russian.) Analysis of Pure Metals and Determination of Vanadium Admixture in Titanium. M. B. Shustova and V. A. Nararenko. Zavodskaya Laboratoriya, Dec. 1960, p. 1339-1341.

Spectrophotometric determination of micro-inclusions of V in purified Ti and in titanium-dioxide. Data for solvents, reaction intensifiers, heating and evaporation techniques and sensitivity of the method. 7 ref. (S11a; Ti, V)

207-S. (Russian.) Potentiometric Determination of Boron in Steels and Alloys. P. Ya. Yakovlev and H. V. Kozina. Zavodskaya Laboratoriya, Dec. 1960, p. 1342-1343.

Method comprising dissolution of steel or alloy in HCl, addition of H_2O_2 and NaOH, boiling, neutralization of Al inclusions by citric acid, titration of the obtained solution with invert sugar by NaOH, determination of the boron content by potentiometry and by reference standards. 4 ref. (S11m; ST, B)

208-S. (French.) Determination of Carbon in Steels and Ferro-Alloys With Low Carbon Content. R. Dezirat. Revue de Metallurgie, v. 57, Dec. 1960, p. 1125-1132.

Review of the volumetric, gravimetric, titrimetric, conductometric, voltametric, nephelopmetric methods and of the method of combustion and measurement at low pressure for the determination of carbon. 25 ref. (S11, 10-54; Fe-b, ST, C)

209-S. (French.) Determination of Oxygen in Steels by Melting in Reducing Conditions Under Argon. M. Hanin. Revue de Metallurgy, v. 57, Dec. 1960, p. 1133-1141.

Method and apparatus for the rapid determination of oxygen in steels using bomb samples, killed with Al and reduced to shavings. The method is developed for studying degree of oxidation of the metal during processing. 9 ref. (S11, D11s, 1-54; ST)

210-S. Nondestructive Testing Is Key to Future of Welding Quality Control. Glenn G. Gibson. Welding Journal, v. 40, Mar. 1961, p. 225-228.

Review of nondestructive testing methods including leak, liquid penetrant, radiographic, ultrasonics, eddy current and magnetic particle tests, their use in welded joint inspection and general application to quality control. 6 ref. (S13, 10-54; 7-51)

211-S. Ultrasonic Flaw Detection in Metals. G. Bradfield. Paper from "The Physical Examination of Metals". Edward Arnold Ltd., London, England, 1960, p. 605-693.

Fundamentals of ultrasonic flaw detection by immersion, shadow and imaging methods. Design of equipment. Application to flaw detection in cast iron, cast steel and nonferrous metals. 135 ref. (S13g; CI, ST, EG-a38)

212-S. Ferrographic Method of Flaw Detection. A. G. Warren. Paper from "The Physical Examination of Metals". Edward Arnold Ltd., London, England, 1960, p. 695-711.

Detection of flaws in steel or other ferromagnetic materials by magnetizing the specimen and applying finely divided Fe, magnetic iron oxide or forming magnetic ink. Flaws which emerge to the surface are clearly visible and under favorable conditions, indications may be given of flaws lying below the surface. (S13j; ST)

213-S. Magnetic Induction Methods of Nondestructive Testing. A. P. Greenough. Paper from "The Physical Examination of Metals". Edward Arnold Ltd., London, England, 1960, p. 713-726.

Nondestructive testing of ferromagnetic specimens to measure the magnetic properties and obtain information concerning composition or physical condition. Cracks, ferromagnetic inclusions, anisotropy, thickness of a nonferromagnetic material and flaws can be detected using magnetic induction. 7 ref. (S13h, P16)

214-S. Measurement of Coating Thickness by Magnetic Methods. A. G. Warren. Paper from "The Physical Examination of Metals". Edward Arnold Ltd., London, England, 1960, p. 727-735.

Permeability and thickness of nonmagnetic coatings on steel are determined by a magnetic method based on the tractive force. 6 ref. (S14h; ST, 8)

215-S. A Spark Spectrographic Procedure for the Determination of Boron in Sheet Steel. E. F. Runge and F. R. Bryan. Applied Spectroscopy, v. 15, Jan. 1961, p. 13-15.

Spark spectrographic analysis of a rotating sample of sheet steel 0.050 in. thick containing 0.009-0.0043% B. (S11k; ST, B, 4-53)

216-S. (German.) Magnetostrictive Ultrasonic Material Testing Process. W. Kaule. Elektrie, v. 14, Oct. 1960, p. 76-80.

Review of manual and automatic ultrasonic testing of ferromagnetic steel wire, rods and tubes up to 50 mm. diameter. Physics of ultrasonic testing. Testing apparatus. Applicability. (S13g; ST, 4-60, 4-61, SGA-n)

217-S. X-Ray Measurement of Plating Thickness. R. H. Zimmerman. American Jewelry Manufacturer, v. 6, Mar. 1961, p. 10-11, 17-18.

Rapid and nondestructive process for measuring plating thickness of small, odd shaped Cu electrical components plated with Au. Standards and calibration. Application in the jewelry industry. (S14e, T1; Cu, Au, 8-62)

218-S. (German.) Spectrum Analysis of High Alloy Steel. Walter Diehl. Archiv fur das Eisenhuttenwesen, v. 32, Jan. 1961, p. 11-18.

Calibration curves for cast Cr steel (0.1-20% Cr), CrNi steel (0-15% Ni), CrNiMo steel (0-3% Mo), Mn steel (0-20% Mn), W steel (0-20% W), and V steel (0-4% V). Evaluation of proper analysis conditions including selection of reference lines (Fe line or reflected beam). (S11k; SS)

219-S. (German.) Use of X-Ray Fluorescence Spectrum Analysis in Iron Works. Hermann-Josef Kopineck and Peter Schmitt. Archiv fur das Eisenhuttenwesen, v. 32, Jan. 1961, p. 19-29.

Review of applicability and analyzing techniques for X-ray fluorescence spectrum analysis of ores, slags, refractories and steel, with particular reference to short time analysis of openhearth slag. Investigation of binary systems Fe-Mo and Fe-Mn to evaluate mutual influences of elements in analysis. (S11p; Fe, ST)

220-S. (German.) Neutron Activation Analysis and Its Usefulness in Analysis of Steel. Wilfried Reiser and Hans Schneider. Archiv fur das Eisenhuttenwesen, v. 32, Jan. 1961, p. 31-38.

Quantitative determination of Mn, Cu, Cr and Mo in steel directly without chemical separation, and of C, Si, P, S, Ni and Ti after separation from other elements by neutron activation techniques. Course of analysis; design of measuring devices. Comparison of neutron activation analysis with conventional methods. (S11q; ST)

221-S. Electromagnetic Determination of Nickel Thickness for Re-Entry Vehicle Heat Sinks. S. A. LoPilato and C. H. Hastings. Materials Research & Standards, v. 1, Mar. 1961, p. 188-191.

Nondestructive testing of the thickness of electrodeposited Ni on Cu heat sinks for ICBM re-entry vehicles. (S14h, T24e; Cu, Ni, 8-62)

222-S. Measurement of the Thickness of Electroplates by the Electrolytic Stripping Method: Nickel Over Copper Base. Prem Behari Mathur and A. S. Lakshmanan. Journal of Scientific & Industrial Research (India), v. 20D, Jan. 1961, p. 16-18.

Anodic stripping of electrodeposited Ni on Cu using a stripping bath composed of NaCl and H_2SO_4 in a modified stripping cell to determine the thickness of the Ni plating. The results are compared with metallographic tests and the BNF jet test. 5 ref. (S14c; Cu, Ni, 8-62)

223-S. (French.) Systematic Analysis of the Melting Zone of Aluminum and Iron After Irradiation by Means of an Atomic Pile. Ph. Albert. Pure and Applied Chemistry, v. 1, Jan. 1960, p. 111-119.

A radioactivation process for the analysis of minute impurities in metals of high purity. By separating a large number of radioisotopes from the specimen, full utilization of the small quantities of material available is achieved. Data are presented for application of both processes to samples of Fe and Al. 4 ref. (S11q; Al, Fe)

224-S. (German.) Testing of Defects in Lacquered Wire. Draht, v. 12, Feb. 1961, p. 52-53.

Method and apparatus for electrical testing of prestressed (5-4000 g. depending upon wire diameter) insulated Cu round wire in a water or Hg bath at a measuring voltage of 100 v. (d-c.) (S13c; Cu, 4-61, 8-70)

225-S. (French.) Gravimetric Determination of Silicon in Cast Iron and Steel. D. Chr. Filipov. Comptes Rendus de l'Academie Bulgare des Sciences, v. 13, Oct. 1960, p. 543-546.

The Si content of alloy, carbon, Ni, Cr and W steels containing 0.16-0.31% Si and cast irons containing 1.65-2.45% Si is determined by precipitation with quinoline from an acid solution. (S11b; ST, CI, Si)

226-S. (French.) Determination of Oxygen and Hydrogen in Steel by the Inert Gas Method. C. E. A. Shanahan. Revue de Metallurgie, v. 58, Jan. 1961, p. 55-64.

Analytical method in which oxygen is determined gravimetrically after melting of the specimen in carbon crucible, the CO formed being extracted in an inert gas and oxidized in CO_2. Free hydrogen is determined by absorptimetry and titration as the water formed by oxidizing in a mixture of Cu oxide and ferric oxide. (S11a, S11j; ST, H, O)

227-S. (Japanese.) Rapid Separation and Spectrophotometric Determination of Titanium in High Alloy Steels. Masao

Kawahata, Heiichi Mochizaki and Takeshi Misaki. Japan Analyst, v. 9, Dec. 1960, p. 1019-1022.

Co-precipitation of Ti with magnesium hydroxide in the presence of W, Cb, V and Cr, with Ti determination by measurement of the light absorbency after masking with EDTA and dissolution in dilute solutions containing sulphuric acid, hydrogen peroxide, perchloric acid and ammonium chloride. 8 ref. (S11a; AY, Ti)

228-S. (Japanese.) Spectrochemical Determination of Small Amounts of Aluminum in Steel. Zenichiro Takao and Satosi Miyosi. Tetsu-to-Hagane (Iron & Steel Institute of Japan, Journal), v. 47, Feb. 1961, p. 145-152.

Spectrographic analysis of various alloy steels containing 0.01-0.100% Al with a quartz spectrograph and a grating spectrograph using an a-c. intermittent arc source. Comparative data are given for total Al content and austenitic grain size. 8 ref. (S11k; ST, Al)

229-S. (Slovenian.) Addition to the Phase Analysis of Steels. Otmar Gautsch and Janez Korosin. Nova Proizvodnja, v. 40, 1960, p. 315-317.

Separation of nonmetallic phases SiO_2, Al_2O_3, FeO, MgO, CaO from alloy steels by electrolytic methods and by chlorination for phase composition studies. 19 ref. (S11f, AY)

230-S. Automatic Ultrasonic Weld-Testing. Metalworking Production, v. 105, Mar. 1, 1961, p. 62-65.

Ultrasonic apparatus applied in detecting and identifying flaws in welded pipe seams at speeds equal to welding speed during automatic welding of large diameter pipe. (S13g; 4-60, 7-51)

231-S. (Japanese.) Influence of Melting Conditions on the Oxygen Content of White Iron. Taira Okamoto and Masao Ibaraki. Japan Institute of Metals, Journal, v. 25, Jan. 1961, p. 19-23.

Determination of oxygen in white iron specimens as a function of holding time (5-40 min.) after addition of ferro-silicon to the melt at 1300-1600° C. using a modified chlorination apparatus. 10 ref. (S11g, D11r; CI-p, O)

232-S. (Japanese.) Spectrographic Determination of Micro Amounts of Acid-Soluble Aluminum in Iron and Steel With the Transient Discharge Source Unit. Yu Yokoyama. Japan Institute of Metals, Journal, v. 25, Jan. 1961, p. 48-52.

Development of a source unit producing different discharges by varying the circuit constants with the spectra emitted at any stage of the discharge cycle being photographed. Determination of discharge stability and excitation condition, using a porous cup-graphite electrode and Ca and K radiation, for optimum sensitivity and reproducibility in application to spectrochemical analysis of Fe and steel. 8 ref. (S11k, 1-52; ST, Fe-b, Al)

233-S. (Japanese.) Quantitative Spectrographic Determination of Impurities in Tantalum and Its Compounds by Intermittent AC-Arc Method. Nakaaki Oda and Mitsuru Idohara. Japan Institute of Metals, Journal, v. 25, Jan. 1961, p. 52-56.

Selection of optimum excitation conditions, mixing ratio of carbon added as buffer, formulas for relative intensity and analytical line pairs and determination of sources of error, in determining concentrations of W, Ti, Mo, V, Cr, Fe, Nb, Ni, Si, Mn and Mg. (S11k; Ta)

234-S. (Czech.) Magnetic Separation of Electrolytically Isolated Phases. Jaroslav Tykva and Jaroslav Jezek. Hutnicke Listy, v. 16, Jan. 1961, p. 53-56.

By subjecting isolated particles obtained from a weldable steel, a Cr steel and the toolsteel CSN19436 to magnetic separation in methanol and subsequent X-ray testing, it is shown that precipitated phases, isolated from their surrounding phases by standard method, always contain impurities of these phases. (S11f, M-general, N7, 3-69; ST)

235-S. (Czech.) Determination of Oxygen by Vacuum Melting. Miloslav Kase and Miroslav Mandl. Hutnicke Listy, v. 16, Jan. 1961, p. 56-59.

Vacuum melting of specimens of low carbon steel containing 0.009% oxygen in a special apparatus, the central part of which is a resistance heated laboratory furnace with oxygen determination from the measured CO_2 pressure. 16 ref. (S11g, D8m; CN, O)

236-S. Determination of Minor Constituents in Low-Alloy Steels by X-Ray Spectroscopy. Robert E. Michaelis, Robert

Alvarez and Betty Ann Kilday. Journal of Research, National Bureau of Standards, Engineering and Instrumentation, v. 65C, Jan-Mar. 1961, p. 71-76.

Analysis of low-alloy steel by X-ray spectroscopy to determine detection limits and interferences for Ag, As, Co, Cr, Cu, Ge, Mn, Mo, Cb, Ni, Pb, S, Se, Si, Sn, Ta, Ti, V, W and Zr. For most elements the detection limit is below 0.01% and interference effects are not considered serious. 5 ref. (S11c; AY)

237-S. Which Non-Destructive Test Do You Use? Harry Thomasson. Canadian Metalworking, v. 24, Mar. 1961, p. 40-43.

Use of X and gamma rays for radiographic testing and fluorescent penetrant dies for inspection of welded structures. (S13; 7-51)

238-S. The Carbon Content of Low Carbon Martensite. M. L. Verneijke. Philips Research Reports, v. 15, Dec. 1960, p. 437-444.

Determination of carbon content in low carbon martensite by dilatometric experiments and resistivity measurements on the assumption that decreases in specimen resistivity and length, caused by first stage tempering, are linear functions of carbon content. 12 ref. (S11, M23b, N7d, P15g; CN-g, C)

239-S. Immersion Tests Reduce Waste. Iron Age, v. 187, Apr. 6, 1961, p. 112.

Stainless steel bar products are tested by ultrasonic immersion technique to determine internal flaws before machining. (S13g; SS, 4-55)

240-S. The Determination of Trace Impurities in High-Purity Selenium. A. I. Williams. Analyst, v. 86, Mar. 1961, p. 172-177.

Neutron activation determination of trace amounts of Cd, Cu, Ni, Te and Zn in high purity Se used for transistors, crystal rectifiers, thermistors, phosphors and photoconductors with Cd-115, Cu-64, Ni-65, Te-127 and Zn-69 isotopes. (S11q; Se, Cd, Cu, Ni, Te, Zn)

241-S. Cost Cutting Ideas. Welding Design & Fabrication, v. 34, Mar. 1961, p. 54-69.

Applications, advantages and limitations of nondestructive metal testing by ultrasonic, radiographic, penetrant, magnetic particle, eddy current, thermographic, magnetographic, thermal and tensile techniques. (S13)

242-S. Steel Is Magnetic...or Is it? Western Machinery and Steel World, v. 52, Mar. 1961, p. 58.

Determination of general stainless or carbon steel grades by comparing magnetic properties in drawn and annealed condition and using nitric acid dip and quenching and tempering tests. (S10r; CN, SS)

243-S. The Radiographic Examination of a Thin Object. C. Casswell and E. Eisner. Nondestructive Testing, v. 19, Mar-Apr. 1961, p. 108-109.

Measurement of variation of wall thickness in a small metal cylinder of precipitation hardened DTD683A Al alloy by X-radiography. (S14e; Al-b)

244-S. (Russian.) Determination of Copper and Manganese Content in Ores by Neutron Radioactivation Analysis. E. M. Lobanov, O. M. Romanov, M. M. Romanov and A. A. Khaidarov. Zhurnal Analiticheskoi Khimii, v. 16, Jan. 1961, p. 25-28.

The direct determination of 0.03-0.9% of Cu and 0.028-0.3% of Mn with a gamma ray scintillation spectrometer of activated rock samples at neutron flux or about 10^{-7} neutron per sq. cm. sec^{-1}. 10 ref. (S11q; RM-n, Cu, Mn)

245-S. (Translation-Brutcher no. 5031.) Nonmetallic Inclusions in Aluminum-Killed Steels in Relation to Steel Composition. F. Kubik. Radex Rundschau, Feb. 1960, p. 86-99.

Study of the existence of a relationship between the chemical composition of steels and the amount and composition of the nonmetallic inclusions present in them, based on mathematical-statistical procedures. (S12, 9-69; ST-c)

246-S. (Russian.) Determination of Beryllium in Uranium by a Spectrographic Method. P. N. Palei and E. V. Bezrogova. Zhurnal Analiticheskoi Khimii, v. 16, Jan. 1961, p. 57-59.

A combined method for determination of 10-6% Be in uranium by chromatographic adsorbtion and spectrographic analysis with experimental error of up to ±20%. 17 ref. (S11k; U, Be)

247-S. (French.) Determination of Scandium in Tungsten Ores by Neutron Activation. L. van Wambeke and G. Pinte. Societe Chimique de France. Bulletin, Nov-Dec. 1960, p. 1901-1902.

Ore samples are irradiated at a neutron flow of 0.3×10^{12} n per sq. cm. per sec. After extraction in mineral-free water, precipitation of $WO_3 + SiO_2$ by the addition of diluted HCl, neutralization, precipitation of Fe and Mn hydroxides and re-dissolving of WO_3--by NH_4OH addition--filtration and treatments with HCl, the activated Sc in solution is determined by a gamma spectrometer. 3 ref. (S11q; W, Sc, RM-n)

248-S. (German.) Ultrasonic Testing of Deep Drawing Sheet. W. Lehfeld. Feingerate-Technik, v. 9, Dec. 1960, p. 556-559.

Reaction mechanism, method and automatic apparatus for ultrasonic testing of steel sheet and continuous strip by the "expansion wave" technique to detect laminations and inclusions. Design of apparatus and interpretation of ultrasonic images. (S13g; ST, 4-53)

249-S. Standards in the Nonferrous Foundry. William A. Mader. Standards Engineers Society, Proceedings, Sept. 1960, p. 83-86.

Production of Al and Al castings from the standpoint of applied standards and specifications with a review of various production methods and the effects of Cu, Si, Zn and Mn alloy additions on strength and castability. (S22, E25, 2-60; Al-b, Cu, Si, Zn, Mn)

250-S. (English.) Optimum Fault Detection in Radiographic Weld Examination. Geert Jan Janssen. Materialprufung, v. 3, Feb. 1961, p. 63-66.

Investigation of optimum testing conditions in terms of radiation source, film type, source-to-film distance and film length during X-ray examination of welds. (S13e; 7-51)

251-S. (German.) Flame Photometric Examination of Aluminum Plates Containing Blisters. E. Pungor and E. E. Zapp. Zeitschrift fur Metallkunde, v. 52, Feb. 1961, p. 107-111.

Analysis of Na and potassium content in rolled Al plates containing blow holes by a flame photometer. Influence of Na and potassium concentration on blister formation. (S11a; Al, 4-53)

252-S. Importance of Ultrasonics in the Inspection of the Convair 880 and 600 Jet Liners. A. N. Hammer. Nondestructive Testing, v. 18, Nov-Dec. 1960, p. 400-402.

Use of ultrasonic inspection to locate flaws in forgings, plates and extrusions before machining and to predict fatigue life. (S13g, T24; 4)

253-S. Measuring Corrosion With Ultrasonic Gages. Corrosion Technology, v. 8, Mar. 1961, p. 81-82.

Instruments operating on ultrasonic resonance principle measure thickness of materials such as walls of tanks and vessels, pipes and boilers. Ultrasonic signal is fed into the material by a probe. (S14g, T26)

254-S. Improved Ultrasonic "Detective" Hunts Voids and Inclusions. Machinery, v. 67, Apr. 1961, p. 138.

Ultrasonic equipment used to detect defects in steel shapes. (S13g; ST)

255-S. Emission Spectrometric Determination of Gaseous Elements in Metals. Pt. 7. Nitrogen in Steels. Hitoshi Kamada and Velmer A. Fassel. Spectrochemica Acta, v. 17, Feb. 1961, p. 121-122.

Determination of nitrogen in cast iron, 18-8 stainless steel and low alloy steel using the d-c. carbon arc extraction technique. 4 ref. (S11k; AY, CI, SS, N)

256-S. (Japanese.) Photometric Determination of Trace Cobalt in Aluminum. Tanaka Reizi. Light Metals, v. 11, Jan. 1961, p. 52-58.

Absorbancy measurement on 99.99% Al and 2S, 24S and 52S alloy specimens containing 0-10 ppm. additions of Co, using an NaOH solution with pH adjusted by HCl and citric acid addition and alpha nitrose-beta napthol or beta nitroso-alpha napthol for photometric determination of Co. 9 ref. (S11a; Al-b, Co)

257-S. Gases in Enameled Steel From Moisture in the Furnace Atmosphere. B. Sweo. Paper from "Porcelain Enamel Institute Forum, Proceedings". v. 21. Porcelain Enamel Institute, Inc., Washington, D. C., 1959, p. 99-101.

Qualitative and quantitative evaluation of the gases present in enameled steel after firing in a furnace having

varying concentrations of water vapor in the furnace atmosphere. Sheet steel specimens are coated with ground coat enamel and fired in a continuous electric furnace at a moisture content from a dewpoint of 10-70° F. and in a temperature range 1220-1600° F. Method of gas extraction and analysis. (S11r; ST, 8-71)

258-S. How to Use Magnetic-Particle Methods. L. B. Strader and D. W. Collins. Metal Progress, v. 79, Apr. 1961, p. 88.

Though useful only for detecting defects at and near the surfaces of ferromagnetic materials (iron, nickel, cobalt and their alloys), this method of nondestructive testing is widely used. There are various types of equipment and techniques with which parts of almost any shape and size can be tested rapidly and accurately. (S13j)

259-S. (German.) Microanalysis of Iron and Steel. Pt. 1. Silicon. S. Meyer and O. G. Koch. Mikrochimica Acta, Jan. 1961, p. 82-87.

Quantitative chemical microanalysis of Si in small amount (10-100 mg.) of pig iron and steel by photometry as silicomolybdic acid. Course of analysis. Establishment of calibration curve. Color stability of silicomolybdic acid. Accuracy of method. (S11a; Fe, ST, Si)

260-S. Customized "Black Light" Inspection of Valve Castings Slices Time, Labor. William Gates. Western Metalworking, v. 19, Apr. 1961, p. 32-33.

Magnetic particle testing for flaws and discontinuities in carbon and alloy steel pressure valve castings. (S13j, T7b; ST, 5, 17-57)

261-S. (German.) Microanalysis of Iron and Steel. Pt. 1. Silicon. S. Meyer and O. G. Koch. Mikrochimica Acta, Jan. 1961, p. 134-139.

Microanalysis of 0.004-0.4% Si in Fe and steel by photometric determination as silicomolybdate blue using a spectrophotometer. Course of analysis. Establishment of standardization curve. Accuracy of analysis. (S11a; Fe, ST, Si)

262-S. (German.) Can Flakes As Such Be Identified in Forgings by the Pulse Echo Method? Gunter Beckmann. Neue Hutte, v. 6, Feb. 1961, p. 99-106.

Ultrasonic detection of flakes in 36 NiCr 2 steel turbine wheel disks; an inductor shaft of 1.3% Cr, 2.87% Ni, 0.45% Mo steel and a 19 Mn 5 Al boiler steel specimen. Evaluation of testing technology and interpretation of ultrasonic images. (S13g, 9-70; ST, 5)

263-S. (German.) Analysis of Hydrogen in Steel by Vacuum Extraction of Solid Steel at 600-650° C. G. Haust. Neue Hutte, v. 6, Feb. 1961, p. 111-114.

Method and apparatus for approximate determination of hydrogen content in steel by vacuum extraction at 600-650° C. Comparison of results with analysis obtained by the conventional Sn fusion method in analyzing 0.15-0.65 unalloyed carbon steel and Cr, CrMn, CrMo, CrNi and CrNiMoV steel. (S11r, 2-61; ST, H)

264-S. (German.) Technique for Determining Oxidic Inclusions in Steel. H. W. Fenzke. Neue Hutte, v. 6, Feb. 1961, p. 119-121.

Analytical method and apparatus for isolation of oxidic inclusions in steel by the Klinger-Koch technique comprising separation of metallic from nonmetallic constituents by electrolysis and isolation of oxidic from other nonmetallic constituents by chlorination. Application to analysis of 16 Mn Cr 5 steel and unalloyed steel. (S11g, 9-69; ST)

265-S. An Evaluation of Procedures in Quantitative Metallography for Volume-Fraction Analysis. John E. Hilliard and John W. Cahn. Metallurgical Society of AIME, Transactions, v. 221, Apr. 1961, p. 344-352.

Calculation of the standard deviation to be expected in the measurement of volume fractions by areal analysis, lineal analysis and four point-counting procedures. Application of a point count method to determine the volume fraction of cementite in equilibrated austenite-cementite steels. 15 ref. (S11j, N8k; ST)

266-S. Research Instrument Solves Variety of Metallurgical Problems. Inco, v. 28, no. 1, p. 22-23.

Spectrographic analysis of 20% Ni stainless steel and Ni base superalloys using an electron probe microanalyzer to determine composition, grain boundary sensitivity, microstructure, crystal growth and carbide precipitation. (S11k; SS, SGA-h)

267-S. (Italian.) Metallurgical Production: Common and Special Steels. Pt. 4. Classification of Steel. Angelo Bellini. Rivista di Meccanica, v. 11, Nov. 7, 1960, p. 31-34.

Data are given for composition, heat treatment and mechanical properties such as hardness, resistance to rotating bend and shear stress, elongation of spring steels. (S22, J-general, Q-general, 2-60; SGA-b, ST)

268-S. (Translation-Brutcher no. 5073.) The Importance of Microanalysis for Researches Into Metallic Materials. Stahl und Eisen, v. 81, Jan. 1961, p. 54-57.

Principal classes of methods of trace analysis: direct; negatively selective; positively selective. (S11e)

269-S. Major Gains in Ultrasonic Testing Make it Tops. Harry Thomasson. Canadian Metalworking, v. 24, Apr. 1961, p. 26-28.

Comparison of magnetic particle and ultrasonic methods for flaw detection in welds. (S13g, S13j; 7-51)

270-S. Autrometer Improves Quality of Steel. Ron Kenyon. Canadian Metalworking, v. 24, Apr. 1961, p. 40-41.

Design of an automatic indexing X-ray spectrograph which can make accurate analyses of materials still in the melting furnaces. (S11k, 1-53; ST)

271-S. Determination and Automatic Control of Eccentricity in Plastic and Rubber Insulated Cables. F. E. Planer. Wire Industry, v. 28, Apr. 1961, p. 365-366.

Nondestructive testing by inductive or capacitive method of the eccentricity of insulated cable during extrusion. (S14h, F28, T1b)

272-S. Analytical Chemistry of Beryllium. L. E. Smythe and R. N. Whittem. Analyst, v. 86, Feb. 1961, p. 83-94.

Review of the analysis of ores, compounds and alloys containing Be by gravimetric, volumetric, colorimetric and fluorimetric, ion exchange, solvent extraction, chromatographic, polarographic, radiochemical and spectrometric methods. 159 ref. (S11; Be)

273-S. An Evaluation of the Formate Method for the Simultaneous Polarographic Determination of Copper and Lead in Steel. P. H. Scholes. Analyst, v. 86, Feb. 1961, p. 116-124.

Application of the formate method for the simultaneous polarographic determination of Cu and Pb in mild steel, alloy steel, Matthey iron, stainless steel and pure Fe, a linear-sweep cathode-ray polarograph being used. Interference effects of Sn, As, Ti, Mo, Bi and Sb on the reduction Cu and Pb. 13 ref. (S11m, 2-60; ST, Cu, Pb)

274-S. (German.) Spectrochemical Analysis of Pilot Samples of Stainless Steels by the Quantometer. Herbert de Laffolie. Archiv fur das Eisenhuttenwesen, v. 32, Mar. 1961, p. 145-152.

Development of a spectrographic analyzing technique which requires only one calibration curve for each spectrum line, independent of composition of steel. Demonstration of established technique in analyzing a 17% Cr-containing stainless heat resistant steel. (S11k; SS, SGA-h)

275-S. Ultrasonic Testing. J. F. Hinsley. Edgar Allen News, v. 40, Apr. 1961, p. 76-77.

Nondestructive testing of solids for flaws and other defects by shadowing or reflecting ultrasonic rays. (S13g)

276-S. Nondestructive Testing and Quality Control of Steel Castings. B. K. Gupta. Current Engineering Practice, v. 3, Feb. 1961, p. 17-26.

Outline of nondestructive testing procedures including visual, etching, dye, fluorescent, magnetic particle and flaw, ringing, ultrasonic and radiographic techniques. Testing applications and their use as inspection standards are listed with reference to specific discontinuities. (S13; ST, 5)

277-S. Inspecting Pipe Welds With Ultrasonics. Theodore Manis and Walter M. Smith. ISA Journal, v. 8, Mar. 1961, p. 56-59.

Nondestructive testing of longitudinal seams in electric welded carbon steel pipe while in production, using a cathode ray unit and recorder and an ultrasonic search unit. (S13g, F26p; CN, 4-60, 7-51)

278-S. (Norwegian.) Gases in Metals. Arne Hoy. Teknisk Ukeblad, v. 108, Jan. 26, 1961, p. 87-89.

Sampling methods and apparatus for the determination of hydrogen in steel

melts. Determination of nitrogen and its effect on internal friction and electrical resistivity. (S11r, N15, 2-60; ST)

279-S. Ultrasonic Methods for Near-Surface Flaw Detection. O. Gericke. Watertown Arsenal Laboratories. U. S. Office of Technical Services, Nov. 1959, 15 p. $.50.

Three procedures show promise. Method one is sensitive to defects located at a minimum depth of 0.015 in., provided these defects scatter the ultrasonic energy. Method two will detect flaws that have a distance of 0.020 in. or more from the test surface, including defects or boundaries (other than the test surface) that are plane parallel to the test surface and scatter a specular reflection rather than scatter the sound beam. Method three can be used if the surface of the test piece is at least 2 x 2 in. large. (S13g)

280-S. Detection by Nondestructive Tests of Overheating in 2014-T6 Aluminum Alloy. P. McEleney and E. Reed. Watertown Arsenal Laboratories. U. S. Office of Technical Services, May 1960, 45 p. $1.25.

Ultrasonic attenuation tests proved successful in the detection of "overheating" or "burning" in 2014-T6 aluminum alloy. Previously overheating has been detected only by metallographic examination. Supporting correlation between ultrasonic attenuation tests and metallographic studies of overheated and non-overheated Al alloy samples. (S18, 1-74, 9-73; Al-b)

281-S. Complexometric Method for Determining Thickness of Chromium Plate on Steel. M. R. Verma, K. C. Agrawal and J. S. Bahl. Electroplating and Metal Finishing, v. 14, Apr. 1961, p. 119-122.

A method of determining the thickness of Cr plating on steel by first stripping the plate with a sulphuric acid, potassium persulphate mixture, then measuring the amount of dissolved Cr and Fe by use of an absorptiometer. 17 ref. (S14; ST, Cr, 8-62)

282-S. Measuring Plating Thickness: Industrial Applications of X-Ray Methods. R. H. Zimmerman. Metal Finishing, v. 59, May 1961, p. 67-73.

Plating substrate K-alpha absorption and plated coating K-alpha emission techniques are used to measure thickness of Sn, Au, Ag and Ni platings. 12 ref. (S14e; Ag, Au, Ni, Sn, 8-62)

283-S. Use of Radioactive Iodine Vapor for Determining Surface Roughness. M. K. Testerman. University of Arkansas (Wright Air Development Division). U. S. Office of Technical Services, PB 161844, Dec. 1959, 48 p. $1.25.

Several relative roughness factors of Au, brass and Al surfaces exhibiting varying degrees of surface roughness are determined using radioactive iodine vapor as an adsorbate. Polished Au foil, having a high degree of purity, is used as a reference surface. (S15; Al, Au, Cu-n)

284-S. Polarization of Capacitance Determinations of Surface Roughness. M. K. Lesterman. University of Arkansas (Wright Air Development Division). U. S. Office of Technical Services, PB 161847, Apr. 1960, 30 p. $1.

Polarization capacitances of metallic surfaces are investigated in both aqueous and nonaqueous electrolytic systems. Systems are evaluated according to their general applicability for the determination of surface roughnesses. (S15)

285-S. Continuous Measurement of Tin-Plate Thickness. Tin and Its Uses, no. 51, 1961, p. 3-4.

Measurement of thickness of tin-plate during continuous strip tin-plating by X-ray absorption and secondary radiation of X-rays. (S14e; ST, Sn, 8-62)

286-S. Determination of the Interelement Effect in the X-Ray Fluorescence Analysis of Cr in Steels. W. Marti. Spectrochimica Acta, v. 17, Apr. 1961, p. 379-383.

Numerical determination of the influences of other element on the X-ray fluorescence analysis of Cr in steel. 4 ref. (S11p; ST, Cr)

287-S. (Czech.) Ultrasonic Testing of Heavy Forgings. Vladimir Koblovsky. Hutnicke Listy, v. 16, Mar. 1961, p. 174-185.

Testing of heavy shafts of the composition 0.32-0.40% C, 0.46-1.36% Mn, 0.28-0.88% Si, 0.026-0.038% P, 0.015-0.024% S, 0.13-0.18% Cu, 0.20-1.26% Ni, 1.05-1.28% Cr, 0.21-0.29% Mo and 0-0.20% V. Comparison of results with those obtained from tensile, impact and bend fatigue testing. Microstructures. 3 ref. (S13g, Q27, Q6, Q5; ST)

288-S. Machining Aluminium and Its Alloys. G. Fitzgerald-Lee. Mechanical World and Engineering Record, v. 141, May 1961, p. 176-180.

Specification compositions and minimum mechanical properties are given for wrought and cast Al alloys after various heat treatments. Data are related to ease and speed of cutting, quality of finish and tool life. (S22, G17k; Al-b)

289-S. A Brief Survey of Wire Rod Defects--Their Occurrence and Detection. G. Earnshaw. Wire and Wire Products, v. 36, May 1961, p. 591-592, 594-596, 654-656.

Methods of inspecting, testing, sampling, etching and cropping steel wire rod to analyze defects. Steelmaking, surface and structural defects considered. (S13; 4-61)

290-S. The Acoustics of Straining and Fracture in the Notched Sheet Specimen. H. E. Romine. Paper from "Symposium on the Testing and Evaluation of Materials for Solid Propellant Rocket Motor Casings". Report no. MAB-156-M. National Academy of Sciences, Washington 25, D. C., 1959, p. 10-12.

Use of contact microphone and tape recorder for recording sound waves omitted during fracture test on high-strength steel and Ti alloy rocket casing materials. Possibilities of use of sound wave characteristics to locate and identify flaws. 3 ref. (S13g, T2p; SGB-a, ST, Ti-b, 17-57)

291-S. Internal Defects in Steel--Some Service Experience and Inspection Considerations. G. P. Smedley. Paper from "Conference on Internal Steel Quality and Methods of Its Assessment". West of Scotland Iron and Steel Institute, Journal, v. 68, 1960-1961, p. 3-24.

Study of internal defects in steel and steel weldments including cracks, blowholes, impurities, laminations, sulphide segregation, decarbonization, siliceous inclusions and residual tensile stress and types of operational failures resulting. Destructive and nondestructive inspection techniques and acceptance standards. (S-general, 9; ST, 7-51)

292-S. Method of Assessing Internal Quality of Steel Tubes and Welds. J. S. Blair. Paper from "Conference on Internal Steel Quality and Methods of Its Assessment". West of Scotland Iron and Steel Institute, Journal, v. 68, 1960-1961, p. 25-40.

Review and comparison of nondestructive testing techniques for steel tubes and welds including radiography, ultrasonic, eddy current and diverted magnetic flux. (S13; ST, 4-60, 7-51)

293-S. The Significance of Defects in Relation to the User With Particular Reference to Castings and Forgings. F. Buckley. Paper from "Conference on Internal Steel Quality and Methods of Its Assessment". West of Scotland Iron and Steel Institute, Journal, v. 68, 1960-1961, p. 61-77.

Report on steel casting and forging defects including voids and inclusions as related to machine service and longevity, acceptance standards and inspection technique. (S-general, 9; 4-51, 5)

294-S. Internal Defects in Steel Plates. J. E. Roberts and I. M. Caskie. Paper from "Conference on Internal Steel Quality and Methods of Its Assessment". West of Scotland Iron and Steel Institute, Journal, v. 68, 1960-1961, p. 78-97.

Review of steel plate internal defects including laminations, inclusions and cracks; visual, magnetic and ultrasonic inspection techniques. Quality standards and plate examination methods. (S-general, 9; ST, 4-53)

295-S. Internal Defects in Steel Castings. J. Cameron and J. Courtney. Paper from "Conference on Internal Steel Quality and Methods of Its Assessment". West of Scotland Iron and Steel Institute, Journal, v. 68, 1960-1961, p. 98-108.

Review of causes of steel casting internal defects including solidification mechanism, gas inclusions and variations in deoxidation practices. Detection methods including radiography, magnetic crack and ultrasonic. (S-general, 9; ST, 5)

296-S. Internal Defects in Large Forgings and Large Castings. J. M. Mowat and P. Packham. Paper from "Conference on Internal Steel Quality and Methods of Its Assessment". West of Scotland Iron and Steel Institute, Journal, v. 68, 1960-1961, p. 109-120.

Review of internal defects in large forgings and castings occurring during fabrication including skulls, inclusions, cavities, cracks, porosity and shrinkage. (S-general, 9; 4-51, 5)

297-S. (Japanese.) Spectrophotometric Determination of Zirconium in Uranium. Masayoshi Kanno and S. Kokubo. Japan Institute of Metals, Journal, v. 25, Feb. 1961, p. 128-131.

Absorption spectra of Zr-alizarin sulphonate is used to determine the Zr content of vacuum melted and cast 0.127-1.24% Zr-U alloys. 6 ref. (S11a; U, Zr)

298-S. Quality Control of Sheared Strip. Sheet Metal Industries, v. 38, May 1961, p. 356-357.

Inspection of sheared steel and tinplate strip by photocells which transmit information concerning faults such as pinholes, off-gage and poor-surface finish to standard transistorized logical elements. (S13g, F2, 9-71; ST, 4-53)

299-S. Ultrasonic Weld Inspection. Jan van den Andel. Canadian Welder, v. 52, May 1961, p. 10-12.

Review of principles of ultrasonic testing with attention to pulse echo, through transmission and resonance methods. Application in straight and angle beam and immersion tests for detection of voids, cracks, porosity, inclusions, lack of bonding and other inhomogeneities in welds. (S13g; 7-51)

300-S. New Developments in Nondestructive Testing of Precision Steel Tubes. Instrument Practice, v. 15, May 1961, p. 553-556.

Testing mild steel, Zr, Zr alloy and stainless steel tubes, including eddy current testing, D. C. saturation technique, internal and surface probes. (S13; CN, SS, Zr-b, 4-60)

301-S. Radiographic Testing Methods. P. W. Sherwood. British Steelmaker, v. 27, May 1961, p. 158, 163.

Use of X-rays and gamma rays in nondestructive testing, testing of steel castings and weldments. The design and operation of the gamma-radiator apparatus. Properties of Ir^{192} and Co^{60} isotopes as the sources of gamma rays. 4 ref. (S13e; ST, 5, 7-51)

302-S. (German.) Ultrasonic Testing of Sintered Bars of High-Melting Metals. H. Stollner. Planseeberichte fur Pulvermetallurgie, v. 9, Apr. 1961, p. 47-50.

Ultrasonic testing (echo-technique) with photographic registration of sintered tungsten bars of 20 x 40 mm. cross section. Interpretation of echo oscillograms for locating and assessment of size and kind (recrystallized area or hollow section) of defect. (S13g; W, 6-72)

303-S. Ultrasonics Solve Testing Problems. T. A. LaRoe and E. T. Hughes. Metal Progress, v. 79, June 1961, p. 86-92, 118, 120, 122, 124.

Through the use of sound waves with frequencies ranging from 200 kc. to 25 mc., engineers can detect a wide variety of surface and subsurface defects in metallic and nonmetallic parts of virtually any size and shape, measure thicknesses from one side of the part and detect lack of bonding in soldered, brazed and, in some instances, adhesively bonded parts. (S13g, S14g)

304-S. (French.) Gas-Phase Chromatography for Determination of Hydrogen, Nitrogen and Oxygen in Steels and Cast Iron. P. Tyou and A. Hans. Revue de Metallurgie, v. 58, Feb. 1961, p. 187-193.

Principles and techniques for determination of gases in metals by melting in a vacuum under argon flux with the advantage of eliminating readsorption on the sublimates deposited on the inner furnace walls. (S11r; CI, ST)

305-S. (French.) Comparison of X-Ray and Optical Spectrometry for the Analysis of Ordinary and Special Steels. Rene Loude and Rene Billet. Revue Universelle des Mines, de la Metallurgie, de la Mecanique, v. 17, Apr. 1961, p. 190-195.

Evaluation of reproducibility and accuracy in composition analysis of low and medium-alloy steels. Corrections necessary because of absorption and interference effects. Use of X-ray spectrometry to complement analysis by optical methods. (S11k, S11p; AY)

306-S. (French.) Applications and Analytical Results With A. R. L. X-Ray Instruments. R. H. Tyas. Revue Universelle des Mines, de la Metallurgie, de la Mecanique, v. 17, Apr. 1961, p. 195-203.

Use of X-ray fluorescence spectroscopy in the analysis of ferrous and nonferrous metals, glass, slags and Fe ores. Interelement correction factors and use of scattered radiation as an internal standard. 13 ref. (S11p, X3)

307-S. (French.) Application of X-Ray Fluorescence Spectroscopy to the Analysis of Light Metals. H. Pfundt. Revue Universelle des Mines, de la Metallurgie, de la Mecanique, v. 17, Apr. 1961, p. 203-207.

Composition analysis of Al and Al alloys, pure Mg, ferrosilicon and quartz. Apparatus and methods for the preparation of powder and metal specimens. (S11p; Al-b, Mg, EG-a39, NM)

308-S. (French.) Application of X-Ray Fluorescence Spectroscopy to the Analytical Control of Cast Steel. R. Berger and P. Deceuleneer. Revue Universelle des Mines, de la Metallurgie, de la Mecanique, v. 17, Apr. 1961, p. 207-214.

Composition analysis of the Fe-Mn-Ni-Cr-Mo-Cu and Fe-W-Cr-V alloys with standard curves constructed for experimental melts. Experimental techniques and results. (S11p; AY)

309-S. (French.) Application of X-Ray Fluorescence Spectroscopy in Ferrous Metallurgy. Hermann-Josef Kopineck. Revue Universelle des Mines, de la Metallurgie, de la Mecanique, v. 17, Apr. 1961, p. 214-223.

Analysis of crude Fe and steel to determine the distribution of alloying elements, composition of the surface film and presence of nonmetallic inclusions and trace elements. Analysis of openhearth and basic Bessemer slag using La^{140} as a radioactive tracer. 8 ref. (S11p, 1-59; Fe-b, RM-q)

310-S. (French.) X-Ray Fluorescence Spectroscopy in Metallurgical Research. T. A. Davies. Revue Universelle des Mines, de la Metallurgie, de la Mecanique, v. 17, Apr. 1961, p. 228-239.

Analysis of Ni-Cu and Ni-Fe alloys, low alloy and stainless steel and Ni-base high-temperature alloys by a manual sequential recording spectrometer and an automatic twin-path spectrometer. Solution techniques enable the identification of minute elemental inclusions. 4 ref. (S11p, 1-52, 9-69; ST, Ni-b, SGA-h)

311-S. (French.) Metallurgical Applications of the X-Ray Scanning Microanalyzer in an Industrial Laboratory. D. A. Melford. Revue Universelle des Mines, de la Metallurgie, de la Mecanique, v. 17, Apr. 1961, p. 247-252.

Analysis of complex nonmetallic inclusions of surface segregation of residual elements in mild steel and of growth material on a tungsten electrode. 4 ref. (S11p, 1-52, 9-69; W)

312-S. (French.) Metallurgical Applications of the Castaing Microscanner. J. Philibert. Revue Universelle des Mines, de la Metallurgie, de la Mecanique, v. 17, Apr. 1961, p. 252-257.

X-ray spectroscopic analysis of the dendritic growth of Al-Cu alloys in relation to solidification phenomena of microstructure of solid solutions after carbide precipitation and of carbides in stainless steel. 13 ref. (S11p, 9-69; Al-b, SS, 14-67)

313-S. The Identification of Pollucite. K. F. G. Hosking. Mining Magazine, v. 104, May 1961, p. 280-282.

Spectroscopic and chemical analysis and microscopic examination of Cs-bearing pollucite. Data on crystal structure, hardness, specific gravity, fusibility and optical properties to facilitate its identification. (S11; Cs, RM-n)

314-S. Initial Bubble Test for Determination of Hydrogen Content in Molten Aluminum. D. J. Neil and A. C. Burr. Modern Castings, v. 39, June 1961, p. 86-89.

Al alloys 2S, 3S, 57S and 75S are maintained under known temperature (up to 1400°F.) and reduced pressure until bubbles of gas nucleate and break through the surface. The pressure and temperature at which this occurs are related to actual hydrogen content as determined by vacuum subfusion. (S11r; Al-b, H)

315-S. (German.) Testing Sintered Metals by Eddy Current Methods. Albert Keil. Zeitschrift fur Metallkunde, v. 52, Apr. 1961, p. 215-218.

Use of eddy current methods in conductivity measurements on sintered Ag-Ag_2O (10% Ag_2O) specimens from 0-600° C. to detect decomposition temperature of Ag_2O and in detection of cracks

in 2-8 mm. diameter tungsten rods. (S13h; Ag, W, 6-72)

316-S. Titanium-Base Alloys (Gas Analysis System Calibration Check). G.A. Picklo, Jr. Report of NRL (Naval Research Laboratory) Progress, May 1961, p. 19-21. (Available as PB 171318 from U.S. Office of Technical Services, Washington 25, D.C.) $1.25.

Hot extraction and vacuum fusion techniques are used with subsequent weight measurements on selected portions of a powdered 1.5% H-Zr alloy to calibrate gas analysis systems for metals, such as Ti containing high hydrogen content. (S11r, S11f; Ti, Zr, H)

317-S. (German.) Special Methods of Nondestructive Material Testing. H. J. Rodewald and C. Studer. Metall, v. 15, May 1961, p. 410-414.

Review of current status of ultrasonic, ultrasonic immersion, penetration, foil replica for detection of micro-holes and X-ray and microhardness test methods. Techniques studied include determination of modulus of elasticity and torsion and use of foil replica for detection of microcracks. (S-general)

318-S. (French.) Nondestructive Testing of Spot Welds. M. Evrard and J. Dubresson. Soudage et Techniques Connexes, v. 15, Mar-Apr. 1961, p. 149-152.

Spot welded 15 CDVG steel sheet of 1-1.5 mm. thickness is ultrasonically tested with longitudinal or transverse wave propagation. Properties and flaws tested include soundness of fused zone, flaws parallel to the joint and vertical cracks. (S13g; AY, 7-51)

319-S. Inspecting Uranium Slugs at Hanford Ultrasonically. Daniel C. Worlton. Nucleonics, v. 19, June 1961, p. 80-81, 82.

Ultrasonic testing for grain size, grain orientation and defects during various stages of manufacturing is integrated into automated production lines. Resonant-frequency method compared with X-ray diffraction data. (S13g, T11g; U)

320-S. (Japanese.) Photometric Determination of Micro-Amounts of Co in Iron and Steel. Pt. 5. Extraction and Determination of Metal Salts With Methyl Isobutyl Ketone. Hidehiro Goto, Yachiyo Kakita and Michiko Namiki. Japan Institute of Metals, Journal, v. 25, Mar. 1961, p. 178-181.

Analysis of specimens of electrolytic Fe and carbon, alloy and stainless steel containing 0.0117-0.490% Co using MIBK for separation of the ferric ions in HCl and extraction of Co as the thiocyanate complex. 18 ref. (S11a; Fe-a, ST, Co)

321-S. (Japanese.) Photometric Determination of Micro-Amounts of Co and Fe in Metallic Ni. Pt. 6. Extraction and Determination of Metal Salts With Methyl Isobutyl Ketone. Hidehiro Goto, Yachiyo Kakita and Michiko Namiki. Japan Institute of Metals, Journal, v. 25, Mar. 1961, p. 181-184.

Simultaneous determination of Fe and Co in electrolytic Ni after extraction with MIBK as the thiocyanate complex. 6 ref. (S11a; Ni, Fe, Co)

322-S. (Japanese.) Photometric Determination of Tungsten in Iron and Steel. Pt. 7. Extraction and Determination of Metal Salt With Methyl Isobutyl Ketone. Hidehiro Goto and Yachiyo Kakita. Japan Institute of Metals, Journal, v. 25, Mar. 1961. p. 184-188.

Analysis of tungsten content in electrolytic Fe and special steels using MIBK for extraction of tungsten as the thiocyanate complex. 14 ref. (S11a; Fe-a, ST, W)

323-S. (Japanese.) Polarographic Determination of Vanadium in High-Speed Steel. Hiroshi Asaoka. Japan Analyst, v. 10, Mar. 1961, p. 255-259.

Analysis of specimens containing 0.64-1.94% V with 3.83-4.21% Cr, 6.21-19.33% W and 0.37-4.51% Mo by polarography after precipitation and reduction of vanadium in HCl solution. 14 ref. (S11m; TS-m, V)

324-S. Continuous Fluoroscopic Inspection of Submerged-Arc-Welded Line Pipe. Pipes and Pipelines, v. 6, June 1961, p. 49-53.

Application of fluoroscopy with image intensification to continuous inspection of longitudinal welds in large diameter submerged-arc-welded pipe. Operating characteristics including sensitivity and operation speed. (S13e, T26r; 7-51)

325-S. (German.) Direct Determination of Niobium and Tantalum by the Ion-Exchanger "Wofatit SBW". S. Spauszus and M. Heimer. Chemische Technik, v. 13, Feb. 1961, p. 96-99.

Quantitative chemical analysis of Cb and Ta in alloyed steels (example: X 10 CrNiWVTa 18.9 steel) by separation of Cb and Ta in the form of Cb_2O_5 and

Ta_2O_5 from other elements (except Ti) and subsequent determination of the mixed oxides by the ion-exchange agent "Wofatit SBW". Examination of the completeness of separation by radioactive W-185, Cb-95 and Ta-182. (S11f; AY, Ta, Cb)

326-S. Electron Beam Micro-Analysis of Some Plutonium-Iron Alloys. V. D. Scott. Journal of Nuclear Materials, v. 3, Mar-Apr. 1961, p. 284-293.

Use of combined replica technique and microanalyzer methods to determine phase compositions and microstructures in specimens over the range of the system. The examination is facilitated by coating the specimen with a thin cellulose acetate film. 11 ref. (S11e, M20r, M-general; Pu-b, Fe-b)

327-S. Making Efficient Use of Magnetic Particle Inspection. Paul E. Eubanks. Foundry, v. 89, July 1961, p. 106, 108, 110.

Description of a new method for inspection of castings using magnetic particles coated with a fluorescent dye and applied with a spray gun. The casting is magnetized in all directions by a specially developed unit. (S13e; 5)

328-S. How Republic Steel Rates Nondestructive Tests. W. A. Black. Welding Design & Fabrication, v. 33, Dec. 1960, p. 42-44.

Evaluation of hydrostatic, radiographic, magnetic particle, ultrasonic and electromagnetic induction testing of resistance welded tubing. The latter testing method together with an automatic spray marking machine is judged best. (S13; 4-60)

329-S. Inspecting Fuel-Slug Cladding at Hanford Automatically. Daniel C. Worlton. Nucleonics, v. 19, July 1961, p. 92, 94, 96, 98.

Lamb wave and eddy current tests are made on Al clad fuel rods to detect bonding layer defects such as voids, nonwets and brittle bonds. (S13g, S13h, T11g; Al, 8-66)

330-S. (French.) X-Ray Fluorescence Applied in Metallurgy. G. Pomey. Mechanique Electricite, v. 45, Apr. 1961, p. 50-53.

Determination of elements in vanadium steel, an alloy steel containing W, Co and Ni, a chromium nickel steel and an oxide film obtained from the surface of a stainless steel by X-ray fluorescence. Effect of structure on results. 14 ref. (S11p; ST)

331-S. (German.) Classification of Metallic Materials by Thermoelectric Effects. B. Weindler. Harterei-Technische Mitteilungen, v. 16, Apr. 1961, p. 23-31.

Method and apparatus for identification of metals with emphasis on 18/8 and 18/8/2 austenitic stainless and unalloyed low-carbon steel by measurement of thermoelectric potential differences. (S11g, P15j; ST)

332-S. Bi-Axial Stress Criteria for Large Low-Pressure Tanks. J. J. Dvorak and R. V. McGrath. Welding Research Council Bulletin Series, no. 69, June 1961, p. 14-24.

Revision of A. P. I. standard 620 to take into account presence of a second stress, compressive or tensile, acting at right angles, on the allowable compressive stress. 5 ref. (S22, Q25, T26q)

333-S. (Russian.) Surface Temperature Measurement During Sliding Friction. A. G. Nikonov and G. N. Klebanov. Izvestiya VUZ--Chernaya Metallurgiya, Feb. 1961, p. 122-127.

Temperature measurements of locomotive and wagon wheel rim surfaces to determine the cause of hardened and brittle layers on the rims under braking action. 4 ref. (S16b, T23p)

334-S. (German.) Evaluation of Oxygen Contents in Aluminum Killed Steels. Walter Koch and Karl Abresch. Stahl und Eisen, v. 81, June 8, 1961, p. 795-800.

Comparative oxygen analysis by hot extraction in vacuum or under Ar and by extraction residues analysis of 0.08-0.09% C steel with 0.045-0.085% Al. Data are given for cross section and structure and chemical composition of inclusions. (S11f, 9-69; ST-c, O)

335-S. Vectors Define Casting Flaws. Iron Age, v. 187, June 29, 1961, p. 70-71.

Nondestructive magnetic particle testing of large low-alloy steel castings is accomplished by cycling three-way magnetization through separate circuits in three planes, setting up vector-magnetization fields. A black-light fluorescent

wet-inspection medium probes defects in internal fillets and small cored openings during a continuous-magnetization period. (S13j, 1-53; ST)

336-S. Standard Designations of Alloys for Aircraft and Missiles. J. J. Vagi and A. F. Haskins. Defense Metals Information Center, Battelle Memorial Institute, DMIC Memo. 42R, May 24, 1961, 77 p. (Available as PB 161192R from U. S. Office of Technical Services, Washington 25, D. C.)

Aeronautical specifications, SAE, AISI, AMS, ASTM and ACI designations, compositions and sources are given for heat and corrosion resistant stainless steels, alloy steels and toolsteels. (S22, T24; ST, 17-57)

337-S. Forgings: 'It's What's Inside That Counts'. Nat Wood. Western Metalworking, v. 19, June 1961, p. 28-29.

Inspection techniques and equipment to insure internal quality in smooth hammered forgings of stainless steel, toolsteel, high-speed steel, high-temperature alloys or SAE steels having uniformity of size and structure. Ultrasonic flaw detection, hardness testers, temperature control devices in annealing and heat treating furnaces. (S13g, Q29, S16, J-general, F22; ST, SGA-h, 4-51)

338-S. (Russian.) Quality of the Outer Surface of Cast Iron Water Pipes. B. D. Khakhalin and A. N. Smolyakov. Liteinoe Proizvodstvo, Mar. 1961, p. 6-7.

Investigation of reasons for the rough appearance of the outer side of cast iron pipeline. It is suggested that during centrifugal casting of the pipe, the velocity of the pattern tube be held below 200-300 rpm. when filled with pitch and sand and its temperature held between 180-220° C. 4 ref. (S15d, E14, 2-61, T26r; CI, 17-57)

339-S. (Book.) Spectrochemical Analysis. 2nd Edition. L. H. Ahrens and S. R. Taylor. Jan. 18, 1961. 453 p. Addison-Wesley Publishing Co., Inc., Reading, Mass. $15.

Review of general principles, techniques and equipment including quantatative and qualitative analysis using the d-c. arc. Sample preparation, selective volatilization, use of internal standards, enrichment techniques and methods of determining a number of elements. Wavelength tables of various elements. 950 ref. (S11k, 10-54)

340-S. (Translation-Brutcher no. 5189.) Rapid Method for Determination of Aluminum in Steel Without Separation of the Iron. H. H. Doleschel. Stahl und Eisen, v. 81, July 1961, p. 448-449.

Reagents required; preparation of sample solutions; determination of acid-soluble Al and total Al. (S11; ST, Al)

341-S. (Translation-Brutcher no. 5129.) Determination of Columbium in (Pig and Cast) Irons. A. I. Ponomarev and A. Ya. Sheskol'skaya. Trudy Inst. Met., v. 4, 1960, p. 240-242.

Procedure for the quantitative determination of Cb in the presence of Fe and Ti without preliminary separation of the latter elements. Results of a series of tests on the precipitation of Cb with tannin in the presence of ascorbic acid. (S11; ST, Cb)

342-S. Industrial Applications of X-Ray Methods for Measuring Plating Thickness. R. H. Zimmerman. Paper from "Advances in X-Ray Analysis", v. 4. Plenum Press, New York, 1961, p. 335-350.

Calibration procedures and data are presented for plating thickness measurements of Au, Ag, Sn and Ni on Cu, brass and steel base metals. Both emission and absorption techniques are described and examples are given of measurements on thicknesses from 10-600 millionths of an inch. 12 ref. (S14e, M22g; Cu-b, ST, Au, Ag, Sn, Ni, 8-62)

343-S. X-Ray Spectrometric Determination of Copper, Tin, and Uranium in Bronze Heat-Treating Material. G. R. Blank and H. A. Heller. Paper from "Advances in X-Ray Analysis", v. 4. Plenum Press, New York, 1961, p. 457-473.

Method is based on the irradiation of an acid solution of the sample, to which In and Zn have been added as internal standards. The over-all limits of error for single determinations at the 95% confidence level are 0.48% Cu, 0.56% Sn and 0.31% U. (S11p; Cu-s, Sn, U)

344-S. X-Ray Fluorescence Analysis of Tungsten-Molybdenum Metals and Electrolytes. K. R. Stever, J. L. Johnson and H. H. Heady. Paper from

"Advances in X-Ray Analysis", v. 4. Plenum Press, New York, 1961, p. 474-487.

W and Mo metal powders, produced by a fused-salt electrolysis procedure, are dissolved and analyzed for W and Mo. The platinum spectral line from the X-ray tube target serves as a self-internal standard. The sensitivity limit is about 0.05% and in the concentration range of 0.5 to 100% the accuracy of analysis is within about 2% standard deviation. (S11p; W, Mo, 6)

345-S. Fluorescence Analysis of Trace Amounts of Hafnium in Zirconium Using a Silicon Crystal. J. C. Parks, Jr., D. C. Plackmann and G. H. Beyer. Paper from "Advances in X-Ray Analysis", v. 4. Plenum Press, New York, 1961, p. 488-494.

Use of analyzing crystals cut parallel to a plane which substantially eliminates second-order reflections. Both Ge and Si have been used with Si reported to give finer resolution and a lower background at the expense of a somewhat lower intensity. (S11p; Zr, Hf)

346-S. An Application of X-Ray Fluorescent Spectrography to Columbium Alloy Melting Practices. D. Moroz, D. E. Fornwalt, S. Aconsky, J. Doyle and W. R. Clough. Paper from "Advances in X-Ray Analysis", v. 4. Plenum Press, New York, 1961, p. 495-513.

Techniques for the determination of both the homogeneity and the elemental compositions of columbium alloy ingots. X-ray fluorescent spectrography and automatic data handling systems are utilized. The method has been applied to specific cases with, for example, a correlation of the degree of variation of homogeneity of columbium alloy ingots with remelting practice. (S11p, C-general; Cb)

347-S. Nonferrous Metals Research. Metallurgia, v. 63, June 1961, p. 279-282.

Review of research into analytical methods, manufacturing processes, corrosion and protection and mechanical properties. (S-general, R-general, Q-general; EG-a38)

348-S. Radiographic Examination of Reactor Pressure Vessels. Metal Treatment and Drop Forging, v. 28, June 1961, p. 220.

A 4.3 million volt linear accelerator radiographs the welds in the thick steel walls of pressure vessels containing the reactor cores. The accelerator uses a high-power radio frequency power generator to launch an electromagnetic wave into an accelerating waveguide. (S13e, 1-52, T26q, T11; ST, 7-51, 17-57)

349-S. Nondestructive Testing of Welded Tubing. Metal Treatment and Drop Forging, v. 28, June 1961, p. 249-250, 252.

Survey of hydrostatic, radiographic, magnetic particle, ultrasonic and electromagnetic induction nondestructive tests for welded steel tubing. (S13; ST, 4-60, 7-51)

350-S. (Translation-Brutcher no. 5113.) Analytical Chemistry of Arsenic, Antimony and Copper in Steels and Iron Ores. S. Gomiscek. Rudarsko-Metall, Zbornik, v. 1, 1959, p. 51-62.

Previously abstracted from original. See item 371-S, 1959. (S11; ST, Fe, RM-n, As, Sb, Cu)

351-S. The Determination of Tin in Pure Iron, Mild Steel and Certain Low-Alloy Steels by Cathode-Ray Polarography. P. H. Scholes. Analyst, v. 86, June 1961, p. 392-399.

Sn is separated by co-precipitation with MnO_2 and determined in a base electrolyte containing peptone and ascorbic acid in HCl with Mo content held to 0.5%. The same method of analysis is used on low-alloy steel. Method is suitable with Sn contents down to 0.001%. 14 ref. (S11m; Fe, ST, Sn)

352-S. Missile Parts Get Fast Check. Iron Age, v. 187, July 13, 1961, p. 87-89.

Magnetic particle testing of alloy and die steel rocket chambers using a central conductor which can reach areas that are otherwise magnetically shielded. (S13j, T24e)

353-S. (German.) Ultrasonic Testing of Rolling Blanks for Wide Strip by the Ultrasonic Echo Method. Christian Strassburger. Stahl und Eisen, v. 81, June 22, 1961, p. 885-893.

Ultrasonic testing of steel models, blanks and cold rolled strip of unalloyed Al killed steel for locating shrink holes,

measuring size of pipes and detection of rolling defects. Comparison of ultrasonic results with those of microscopic and macroscopic investigations. (S13g; ST, 4-53)

354-S. (German.) Magnetostrictive Ultrasonic Material Testing Method. Kaule. Technik, v. 16, May 1961, p. 385-389.

Mechanism, apparatus and application of a dynamic testing method with increased defect detectability, time efficiency and a wider range of application than static methods for ultrasonic testing of metal rods and wire from 20-600° C. (S13g, 1-54, 1-69, 2-61)

355-S. Some Experiences in the Use of the "Quantovac" in a Steelworks Laboratory. S. Muir. Paper from "West of Scotland Iron and Steel Institute, Journal", v. 67, 1959-1960, p. 45-60.

Description of a spectrographic instrument for analyzing metals with spark excitation in an oxygen-free atmosphere. Tabulation of data from tests on an experimental installation showing optimum operating conditions and degree of reproducibility of readings. (S11a, 1-52; ST)

356-S. (German.) Distribution of Copper Between Lead and Carbon-Saturated Iron Melts. Georges Urbain. Archiv fur das Eisenhuttenwesen, v. 32, May 1961, p. 303-304.

Chemical, electrolytic and colorimetric measurement of distribution coefficient of Cu between liquid Pb and C-saturated Fe at 1415° C. at various Cu concentrations up to 1%. (S11, P12, 2-61; Fe-b, Pb-b, Cu, 14-60)

357-S. Effect of Specifications of Gray Iron Castings. L. J. Woehlke. Foundry, v. 89, Aug. 1961, p. 80, 82-83.

Specifications of surface finishes, dimensional tolerances, inspection requirements and hardness tests to meet new demands and requirements of industry. (S22; CI-n, 5)

358-S. The Platinum Metals in Temperature Measurement. Platinum Metals Review, v. 5, July 1961, p. 89-91.

Review of several papers presented at the Fourth Symposium on "Temperature, Its Measurement and Control in Science and Industry" at Columbus, Ohio, Mar. 27-31, 1961, on the role of Pt metals in temperature measuring instruments. Properties of Pt and Pt alloys in resistance and thermocouple thermometry at high and low temperatures are considered. 13 ref. (S16, X9; Pt, 17-57)

359-S. A Simplified Hot-Extraction Apparatus for the Determination of Hydrogen in Steel. C. E. A. Shanahan and F. Cooke. Iron and Steel Institute, Journal, v. 198, July 1961, p. 257-262.

Evacuation by Hg displacement at 650° C. Performance is compared to that of vacuum heating. 6 ref. (S11r; ST, H)

360-S. (German.) Detection of Nonmetallic Inclusions in Rolled Material by Ultrasonics. G. Beckmann and K. Spiegelberg. Neue Hutte, v. 6, May 1961, p. 316-321.

Ultrasonic testing of CK 22 steel billets with subsequent machining of billets, magnetic testing and metallographic identification of slag inclusions to establish the reliability of ultrasonic testing as influenced by the chemical composition of the inclusions. 10 ref. (S13g, S11, 9-69; ST)

361-S. (Czech.) Spectral Analysis of Sponge Iron. Miroslav Malinek and Mojmir Soudny. Hutnicke Listy, v. 16, May 1961, p. 358-361.

Spectrographic determination of Al_2O_3, CaO, MgO, MnO, SiO_2 and TiO_2. Line intensity as a function of concentration. 13 ref. (S11k; Fe, 2-64)

362-S. (German.) Ultrasonic Testing of Cast Iron. Richard Gerstner. Materialprufung, v. 3, June 1961, p. 213-217.

Ultrasonic testing of material defects and investigation of graphite structures (nodular or lamellar), degree of saturation and tensile strength by sound velocity measurement. 9 ref. (S13g, S11, Q-general, 1-74; CI)

363-S. (German.) Means for Precise Crack Depth Measurement. Alexander Matting and Volker Deutsch. Materialprufung, v. 3, June 1961, p. 218-224.

Nondestructive measurement of crack depth by direct or alternating current methods. Investigation of factors controlling accuracy of

measurements such as contact resistance, shape and composition of specimen and shape and location of crack. 5 ref. (S13c)

364-S. (German.) X-Ray Determination of Retained Austenite in Case-Hardened Steels. Gunter Bierwirth. Materialprufung, v. 3, June 1961, p. 228-233.

X-ray analysis of retained austenite in case hardened steel using Cr, Fe, Co or Mo k-alpha radiation and a counter-diffractometer, is discussed and demonstrated for the case of a failed case-hardened 25 MoCr 4 steel gear wheel. 9 ref. (S11p, N8n; ST)

365-S. Grading Transformer Sheets Continuously. F. H. Baer. Control Engineering, v. 8, Aug. 1961, p. 107-109.

New equipment measures both thickness and core loss for transformer steels on the production line. Sheets can be 750-1000 mm. wide, 0.35-0.5 mm. thick and any length. Core loss is indicated directly in Watts/kilogram with an accuracy better than ±5%. (S14c, P16s, 1-52, 1-54; SGA-n, ST)

366-S. Magnetic Particle Testing of Brazed Joints in Nonmagnetic Stainless. Maxwell Pevar. Welding Design & Fabrication, v. 34, July 1961, p. 62-63.

Inspection system depends on brazing alloys becoming magnetic when alloyed to nonmagnetic stainless steels. A solution consisting of magnetic particles suspended in plastic is applied to the joint as an aerosol spray. A magnetic field is applied and the solution allowed to dry as a film. (S13j; SS, 7-52)

367-S. Sound Gages Chem-Milled Tube. Iron Age, v. 188, July 27, 1961, p. 120.

Ultrasonic resonance measurement of the thickness of tubing, large sections, sheet metal and hollow-cylindrical parts during chemical milling. (S14g, G24; 4-53, 4-60)

368-S. The Expanding Revolution in Steel Mill Testing. Magnafacts, v. 9, Summer 1961, p. 6-7.

Nondestructive testing, including eddy current, black light and fluorescent penetrant flaw detection systems for billets, continuous weld pipe, seamless tube and other mill products. (S13; ST, 4-52, 4-60)

369-S. The Ultrasonic Detection of Defects in Cast Steel. A. H. Sully and F. D. Lavender. British Foundryman, v. 54, July 1961, p. 293-302.

Effect of the nature of the cast structure and the relatively rough surface of unmachined castings on the transmission of the ultrasonic beam and the sensitivity of defect detection in cast steels. 8 ref. (S13g, 3-71; ST, 5)

370-S. (Pamphlet.) British and Foreign Specifications for Steel Castings. Pt. 2. 1961. 41 p. British Steel Castings Research Assoc., 5 East Bank Rd., Sheffield 2, England. $7.50.

Comparison of mechanical and chemical specifications for Australia, Canada, India, New Zealand, South Africa, Denmark, Japan and Russia with British standards. Castings include carbon, alloy and stainless steels. (S22; ST, 5)

371-S. The Determination of Gases in Metals. C. J. Smithells. Iron and Steel Institute, Journal, v. 198, June 1961, p. 124-125.

Symposium on analytical methods for gases in metals. H_2, N_2 and O_2 are determined in Fe, Ti, Zr, Mo, Be and steel. Methods of analysis include vacuum extraction, spectroscopy, radioactivation, isotope dilution, carrier gas, X-ray diffraction, X-ray fluoresence, X-ray emission and damping capacity measurements. (S11, 10-54; Fe-b, Ti, Zr, Mo, Be, H, N, O)

372-S. The Examination of Oxide Scales on Iron-Chromium Alloys by X-Ray Scanning Microanalysis. G. C. Wood and D. A. Melford. Iron and Steel Institute, Journal, v. 198, June 1961, p. 142-148.

Oxide scales produced on Fe-Cr (14.4-13.66%) alloys in steam at 950-1000° C. are examined qualitatively and quantitatively by X-ray scanning microanalysis. Optical examination reveals an outer layer containing FeO, Fe_2O_3, Fe_3O_4 and Cr and an inner layer consisting of Cr_2O_3, Cr_3O_4, Fe_2O_3 and a Fe-Cr-O spinel. 25 ref. (S11e, M-general, R1h, 2-60, 2-62; Fe-b, Cr, 9-52)

373-S. In-Motion Radiography of Sergeant Missile Motor Casing. Ernest H. Rodgers. Materials Research & Standards, v. 1, July 1961, p. 537-539.

Problems involved in the application of a rod-anode tube, strip film and in-motion technique to longitudinal and circumferential weld radiography. (S13e, T24e)

374-S. (German.) Mass Spectrographic Investigation of Degassing Products of Magnesium Containing Hydrogen and Silicon. K. Bornkessel and J. Pilot. Zeitschrift fur Naturforschung, v. 16a, Apr. 1961, p. 432-434.

Degassing of Mg specimens from 440-520° C., followed by spectrographic determination of SiH_2 component. (S11c, C5m; Mg, Si, Mn)

375-S. The Heat Treatment of Steel. Pt. 12. Pyrometers. Edwin Gregory. Edgar Allen News, v. 40, July 1961, p. 158-159.

Method of evaluating suitability of thermocouples of various metal combinations for measurement of temperatures within a particular range. Calculation of emf.-temperature relation curves, allotropic change point, thermoelectric inversion point and thermoelectric power. (S16b, J-general, X9q; ST)

376-S. Optical Spectroscopy. A. C. Menzies. Research Applied in Industry, v. 14, July 1961, p. 285-292.

Review of principles, techniques and equipment of optical spectroscopy including ultraviolet and infrared absorption; methods of specimen preparation; and application to metallographic and composition analysis of metals, alloys and inorganic and organic materials. 4 ref. (S11k, M-general)

377-S. (Japanese.) Statistical Study on the Quality of KS-50 Commercially Pure Titanium Forgings. Masayoshi Inoue, Haruo Okamoto, Hidetake Kusamichi and Kazuo Miyamoto. Light Metals, v. 11, May 1961, p. 182-195.

Correlation of data for ultimate tensile strength, elongation, reduction of area, Brinell hardness and O and Fe contents to establish metallurgical uniformity. Comparison is made with K50 Ti sheet. (S22, S11, Q-general, 2-60; Ti-a, 4-51)

378-S. Testing Irradiated Fuel at Hanford. J. M. Fouts. Nucleonics, v. 19, Aug. 1961, p. 64-65.

Radiographic, weighing and ultrasonic procedures and equipment for testing natural-U, Al-clad irradiation fuel for corrosion, dimensional stability and bond integrity between U core and Al cladding after irradiation. (S13, P10, R-general, T11g, 2-67; U-b, Al, 8-66)

379-S. Instrumental Neutron Activation for Rapid Economical Analysis. Vincent P. Guinn. Nucleonics, v. 19, Aug. 1961, p. 81-84.

Activation analysis, using a 3-Mev. Van de Graaf accelerator, involving photo-excitation of metal elements and their isotopes by irradiation with thermal neutrons and observation of energies and half-lives of decay gamma rays. Major benefit is speed of analysis as compared with chemical and spectroscopic methods. 20 ref. (S11q, 1-52)

380-S. (Russian.) Ultrasound Testing of Circumferential Flash Welds on Thin-Walled Tubing. F. I. Kislyuk and V. S. Pavlichenko. Avtomaticheskaya Svarka, Apr. 1961, p. 40-46.

Detection of flaws caused by oxidation, craters or nonfusion in the weld seam of steel tubing with a diameter of 300-500 mm. and wall thickness of 8-10 mm. 8 ref. (S13g, K3r, 9-71, 9-72; ST, 4-60)

381-S. (German.) Ultrasonic Testing of Steel and Cast Iron. Evaluation of Material Characteristics and Microstructure. Technica, v. 10, June 23, 1961, p. 842-844.

Principles of ultrasonic testing and evaluation of test results for modulus of elasticity, modulus of torsion and Poisson's coefficient by measurement of velocity of sound. Correlation between microstructure, tensile strength and velocity of sound. (S13g, Q21, Q27, M27; ST)

382-S. (Italian.) Refractories, Radioisotopes and Nonmetallic Inclusions in Steel. Refrattari, no. 11, Apr. 1961, p. 367-369.

Radioisotope tracer technique used in tracing nonmetallic inclusions (refractories) in steel by treating refractories with radioisotopes. The radioisotopes in steel are identified by Geiger counter, by spectrometer or by a film

which localizes the radioactive inclusion. (S11, 1-59, 9-69; ST)

383-S. Gas Determination in Vacuum Tube Materials. B. J. Bliss. Paper from "Seventh National Symposium on Vacuum Technology Transactions". Pergamon Press, Inc., New York 22, 1960, p. 145-148.

Detecting gas levels in carbonized Ni, Al-clad, Ni, Ni-clad steel, Al-clad steel and alloys of Fe, Al, Cu and Ni with a high vacuum bulb heated between 30 and 1300° C. with a photoprojection bulb. (S11r, 1-53; ST, Ni, Al, Fe, 8-66)

384-S. An X-Ray Spectroscopic Study of Titanium Beryllides. E. E. Vainshtein, E. A. Zhurakovskii and I. B. Staryi. Academy of Sciences of the USSR, Proceedings, Physical Chemistry Section, v. 135, Nov. 1960, p. 1077-1079.

Investigation of the fine structure in the X-ray spectra of two well established phases with compositions close to the intermetallic compounds of the TiBe and $TiBe_2$ type, made by sintering a mixture of Ti metal and Be. Controlled chemical analysis indicates an actual concentration of Be in good agreement with the theoretical values. The structure of both alloys is checked by comparing X-ray diffraction patterns with established theoretical data. (S11n, M27; Ti, Be)

385-S. Radioisotopes in Production Engineering. W. G. Busbridge. Production Engineer, v. 40, July 1961, p. 468-473.

Applications include determination of wear rate of neutron-irradiated steel piston ring; gaging thickness of sheet steel and brass with nuclear radiation; detection of flaws in steel, Fe and Al castings by radiography using Co^{60} or Tm^{170} as gamma ray source. (S13e, S14e, 1-59; ST, Cu-b, 4-53, Fe, Al)

386-S. A Comparison of United States, European and British Commonwealth Codes for the Construction of Welded Boilers and Pressure Vessels. J. F. Lancaster. American Society of Mechanical Engineers, Paper no. 61-SA-40, 1961, 19 p. $1.

Tabulations include specifications for materials (particularly carbon steel boiler plate), permissible stress/temperature relationships, low temperature applications, welding requirements, design formulas, permissible stresses and joint efficiency factors. 22 ref. (S22, T26q; CN, 7-51, 11-62)

387-S. Isotopes as an Aid to Inspection. J. F. Hinsley. Metallurgist, v. 1, July 1961, p. 319-321.

Radioactive isotope theory and metallurgical applications including use in tracing the source of inclusions in ingots and castings, to study wear in blast furnace linings and in bearings to study diffusion rates in melts and to measure coating or strip thicknesses and weld defects. 4 ref. (S13e, S14e, N1a, Q9, 1-59, 17-57)

388-S. Semi-Automatic Crack Detection Line. Instrument Practice, v. 15, July 1961, p. 872-873.

Design and operation of a semi-automatic process line consisting of a series of tanks for dye penetrant detection of cracks and flaws in aircraft components. (S13k, 1-52, T24)

389-S. Factors to Consider in Selecting Ultrasonic Testing Equipment. R. A. Seidel. Metal Progress, v. 80, Aug. 1961, p. 83-87.

In choosing an ultrasonic instrument for flaw detection, ruggedness, degree of accuracy needed, ambient illumination conditions, instrument stability, dependability, simplicity of operation, size, weight and portability are important factors to consider. (S13g, 1-53)

390-S. Temperature Indicating Paints and Compounds. Gerard T. O'Brien. Machine Production, v. 20, July 1961, p. 23-27.

Use of crayons, lacquer, pellets and paints to measure temperature of the workpiece in welding and preheating of ferrous and nonferrous metals. Accuracy, temperature range, indicating speed and applications of each type of indicator. (S16, K-general, K9p)

391-S. Magnetic Method Reduces Inspection Time Over 90%. Steel, v. 149, Aug. 7, 1961, p. 77.

Development of a unit which produces magnetization in three planes for

inspection of ferromagnetic castings weighing up to 25 tons. (S13h, 1-52; 5)

392-S. Quality Standards Are Met by Rebuilt Hot Strip Mill. Steel, v. 149, July 24, 1961, p. 96, 99.

An automatic gage control is installed on a continuous hot strip mill to eliminate fluctuations in thickness of hot rolled steel strip and coils. Other techniques to improve sheet shape, surface quality and physical properties are outlined. (S14c, F23, 1-66, P-general, X20c; ST, 4-53)

393-S. (Italian.) Radiographic Examination of Fillet Welds. Decio Stellato. Rivista Italiana della Saldatura, v. 13, Mar. 1961, p. 130-136.

The X-ray examination of fillet welds by a special technique which removes difficulties arising from the considerable variation in thickness of the metal being observed. (S13e, W9r)

394-S. Spectrochemical Analysis of High-Purity Tungsten. R. W. Lewis, C. F. Earl, J. L. Potter and J. R. Wells. U. S. Bureau of Mines, Report of Investigations 5814, 1961, 12 p.

Determination of 19 impurities in an experimental procedure in which samples are thermally converted to the oxide, mixed with graphite and an internal standard element (Ge, La, NaCl) and excited in a d-c. arc. 10 ref. (S11k, 1-53; W)

395-S. (German.) Operational Experiences With a New Vacuum Spectrometer. Peter Dickens, Paul Konig and Theodor Dippel. Archiv fur das Eisenhuttenwesen, v. 32, June 1961, p. 369-373.

Chemical analysis of C, Si, Mn, P, S, Cu, Cr, Ni, Al, As and Sn in basic Bessemer steel specimens by a vacuum spectrometer using two fluorspar prisms for analysis of light. Design of spectrometer and applicability (spectrum range 1770-3000 AE). (S11a, 1-52; ST)

396-S. (German.) Apparatus-Induced Difficulties in Vacuum Spectrometer Operation. Erich Piper and Horst Kern. Archiv fur das Eisenhuttenwesen, v. 32, June 1961, p. 375-377.

Effect of residual oxygen contained in argon atmosphere in an excitation chamber on analysis of Si-and Al-alloyed stainless steel and scale resistant steels with particular reference to X 10 CrAl 24 steel. 4 ref. (S11a, 1-52, 3-69; SS, Si, Al)

397-S. (Translation-Brutcher no. 5118.) Investigations on the Spectrographic Analysis of High Alloy Steels. N. Diehl. Archiv fur das Eisenhuttenwesen, v. 32, Jan. 1961, p. 11-18.

Previously abstracted. See item 218-S, 1961. (S11k; SS)

398-S. Improving Thickness Control in Hot Strip Mills. R. G. Beadle and W. E. Miller. Control Engineering, v. 8, July 1961, p. 94-99.

Control of variations in steel strip thickness caused by thermal rundown, cold spots and loss of tension at the end of the strip by using load and X-ray gages for inspection. The system design is based on digital computer analysis of steady state performance and analog computer analysis of transient performance. (S14, 1-53; ST, 4-53)

399-S. (German.) Use of Regression Analysis in Low Shaft Furnace Smelting Control. Karl-Friedrich Ludemann, Rolf Ebert and Rolf Kastner. Neue Hutte, v. 6, June 1961, p. 325-333.

Evaluation of production data by statistical analysis with particular reference to coke consumption as influenced by coke composition and distribution of Si and S between metal and slag as influenced by pig iron and slag composition. (S12, D8n; CI-a)

400-S. (German.) Possibility of Contact-Free and Automatic Temperature Measurement During Hot Rolling of Steel. Rudolf Schulze and Fred Esser. Neue Hutte, v. 6, June 1961, p. 343-349.

Surface temperature measurement techniques and applications of equipment such as optical (total radiation) photocell and photoelectric pyrometers and of reference measurements. Use in measurements at 900-1100° C. in hot rolling of ingots of St. 52 steel, 100 Cr 6, 40 NiCr 5 and 45 W Cr V 7 steel. (S16b, 1-52, F23, 1-66; ST)

401-S. Determination of the Iron Content of Thomas Slag. H. J. Kopineck. Philips--Serving Science and Industry, v. 8, Feb. 1961, p. 38-39.

The slag is poured onto a plate, drawn off while still hot and broken with a compressed-air hammer. After cooling, sieving (400 mesh per cm. 2) and pressing, Fe content is measured by X-ray spectral analysis using a fixed crystal and detector. (S11p; RM-q, Fe)

402-S. Properties of Iron Alloys (Analysis of Complex Alloys). O. R. Gates and Ove Mylting. Report of NRL (Naval Research Laboratory) Progress, July 1961, p. 18-19. (Available as PB 171320 from U. S. Office of Technical Services, Washington 25, D. C.)

The separation of Fe-base alloys containing Cb, Ti, Ni, Li and Al for analytical purposes is given. A sequence is developed for determining various elements in one sample weight. (S11f, 1-54; Fe, Cb, Ti, Ni, Li, Al)

403-S. Fluoroscopic Methods of Weld Evaluation. Otto Renius and D. W. Bowman. Welding and Metal Fabrication, v. 29, Aug. 1961, p. 341-343.

Comparison of the sensitivity of direct fluorescent screen viewing, electronic image intensifier viewing and closed-link television viewing of a fluorescent screen. Design, intensity and safety of the systems. (S13e; 7-51)

404-S. Ultrasonic Methods of Continuous Measurement. B. L. Davies. Research Applied in Industry, v. 14, Aug. 1961, p. 302-308.

Review of transmission, resonance and pulse echo methods and their application in industry for continuous measurement and standardization. (S14g)

405-S. An Introduction to Statistical Techniques for Foundry Experiments. C. A. Rowe. Journal of Steel Castings Research, July 1961, p. 1-13, 18.

Illustrations and sample problems of the "t" test, used for verifying experimental data, the "F" test, used for testing the significance of three or more groups of data and the Analysis of Variance, used for determining the statistical significance of the value of "F". 17 ref. (S12, E-general)

406-S. A Statistical Analysis of Calcium Deoxidation Data. C. A. Rowe. Journal of the Steel Castings Research, v. 20, Jan. 1961, p. 7-10.

Statistical analysis of ductility and impact properties of sand cast steels killed with Al only and with Al and Ca. Ca does not affect the elongation, reduction of area and impact properties of acid electric steel and elongation and reduction of area of basic electric steel but does affect the impact properties of basic electric steel. (S12, D5c, Q23p, Q6, 2-60; AY, Al, Ca, 5-60)

407-S. Quality Control Governs Razor Blade Manufacture. Australasian Manufacturer, v. 46, July 15, 1961, p. 44-47, 49.

Slitting, welding, perforating hardening, tempering and sharpening operations on high-tensile steel strip. Mechanical and physical property testing, strip thickness measurements, Vickers hardness testing and visual and microscopic examinations. (S14, M21, Q29, T6q, 18-74; ST, 4-53)

408-S. (German.) Survey of Investigations on Dressing of Lead-Copper Mattes. H. Hadamovsky. Monastsberichte der Deutschen Akademie der Wissenschaften zu Berlin, v. 1, Dec. 1959, p. 779-780.

Separation of Pb from Cu by grain coarsening of PbS by heat treating. Determination of phase equilibria in the quaternary system Cu-Fe-Pb-S. (S11f, N3, 2-64, M24d; Cu, Pb, Fe, S)

409-S. Sonic Contour Follower Cuts Time, Costs on Curved Honeycomb. Western Metalworking, v. 19, Aug. 1961, p. 35.

Ultrasonic inspection of brazed honeycomb panels 10 by 20 ft. by (up to) 20 in. (radius). Sound is transmitted into the panels through a water feed mechanism by a focused-beam lithium sulphate transducer. (S13g; 7-52, 7-59)

410-S. The Determination of Organic Carbon on the Surface of Steel Sheets. W. E. Boggs and G. E. Pellissier. Materials Research & Standards, v. 1, Aug. 1961, p. 627-630.

Organic contamination introduced during processing and remaining after mill cleaning is measured by surface oxidation of carbonaceous contaminants, followed by microscopic examination of

the carbon oxides involved. Method and apparatus for vacuum combustion techniques. (S-general)

411-S. Spotwelding Control for Reliability. Frank J. Dietrich. Assembly and Fastener Engineering, v. 4, Sept. 1961, p. 39-42.

X-ray and macrographic techniques and equipment are used in testing specimens for defects and machines for reliability. Bend and shear strength tests and examination for penetration, inclusions, nugget size and configuration are conducted on random samples. (S13; 7-51)

412-S. (German.) Anodic Oxidation of Aluminum and Aluminum Alloys. Schweizer Archiv, v. 27, June 1961, p. 274-278.

Suggestions for standardizing methods for measuring thickness of Al or Al alloy coatings including microscopy and eddy-current techniques and measurement of breakdown voltage and resistance. (S14, L19; Al-b)

413-S. Quantitative Extraction of Nonmetallic Inclusions From Steel. H. Walz and R. A. Bloom. American Institute of Mining, Metallurgical and Petroleum Engineers, Preprint, Nov. 30-Dec. 2, 1960, 11 p.

Review of the acid, halogen and electrolytic residue methods of extraction and design and operation of electrolytic and chlorination apparatus. Development of an extraction procedure consisting of electrolytic separation and treatment of the residue by chlorination and vacuum sublimation. Application to extraction of nonmetallic inclusions from Al-killed 1040 and 4340 steels and from ingot scums. 27 ref. (S11f, 9-69, ST)

414-S. (Italian.) Department of Nondestructive Testing. Istituto Sperimentale dei Metalli Leggeri--Rapporto Annuale 1960, 1961, p. 41-46.

Flaw detection and thickness and corrosion measurements in steel, bronze and light alloy tanks, autoclaves, castings, welds, bolts, pipes and turbines by X-ray and gamma ray radioagraphy and ultrasonic testing techniques. (S13, S14, R11a, T26, X1a; ST, Cu-s, EG-a39, 5, 7-51)

415-S. Calorimetric Thickness Measurements. Metal Industry, v. 99, Aug. 18, 1961, p. 127-128.

Method for measuring thickness of Ni on stainless steel, Zn and Cd on steel and Ag on phosphor bronze. A simplified calorimeter measures heat generated when coating is dissolved by a chemical reagent. The heat generated is directly proportional to the weight of the dissolved metal. (S14; Ni, Zn, Cd, Ag, SS, ST, Cu-s)

416-S. A Nondestructive Method to Detect Pipes and Cavities in Hot Steel Blooms During the Rolling-Process by Means of Betratron, X-Ray Image Intensifier and Television-Setup. W. Lueckerath, K. Flink and R. Flossmann. Philips--Serving Science and Industry, v. 8, Jan. 1961, p. 7-12.

A betatron X-ray testing assembly is used in a rolling mill to study macroscopic solidification structures and defects by shooting hard X-rays into the steel. The resulting penetration pattern is transmitted by X-ray image intensifier tube and television unit to a screen for observation. (S13e, 1-52, 9-67, F23; ST, 4-52)

417-S. Nondestructive Test Methods. F. W. Wood. Product Engineering (Design Digest Issue), v. 32, Sept. 4, 1961, p. 28-30.

Survey of X-ray, magnetic particle, electrostatic particle, ultrasonic and penetrant methods for detection of flaws in structural material. (S13; SGB-s)

418-S. (German.) Ultrasonic Testing of Heavy Plates During Their Fabrication. Walter Dick, Paul Holler and Erich Lechky. Stahl und Eisen, v. 81, Aug. 17, 1961, p. 1116-1122.

Automatic ultrasonic flaw detection employing through radiation by longitudinal waves for testing cold and straightened heavy steel plates without interruption of production flow. Design and operation of testing plant; evaluation of test results. (S13g, 1-52; ST, 4-53)

419-S. (Spanish.) Rapid Determination of Silicon in Steels. Maria del Carmen Consuegra Ferrer and Ricardo de la Cierva. Instituto del Hierro y del Acero, v. 14, Apr. 1961, p. 392-396.

Shavings of carbon steel, electric steel or high-elasticity silicon-manganese steel containing 0-3% Si are dissolved and boiled in diluted HNO_3 to which water and ammonium molybdate are added. The precipate is dissolved by adding 12N H_2SO_4 and the resulting

silicomolybdic acid is subjected to photometric analysis. 21 ref. (S11a, 1-53; ST, Si)

420-S. Minimizing Matrix Effects in Stainless Steel, Type 422, Using Oxygen in the Analytical Gap. Robert S. Hullings. Applied Spectroscopy, v. 15, 1961, p. 99-101.

Emission spectrographic procedure for the analysis of stainless steel using a point-to-plane technique. Oxygen is directed onto the sample face for improved accuracy and reproducibility over that obtained in air atmosphere. 4 ref. (S11k; SS)

421-S. The Spectrographic Determination of Molybdenum in Uranium-Molybdenum Alloys. Douglas H. Purcell. Applied Spectroscopy, v. 15, 1961, p. 101-103.

Determination of Mo as an alloying constituent in U-Mo alloys by the point-to-plane spark method of spectrographic analysis. A concentration range of 1-5% Mo is covered with ±7% precision at the 95% confidence level. (S11k; U-b, Mo)

422-S. (French.) Metallurgical Analysis by X-Ray Fluorescence. G. Pomey. Mechanique Electricite, v. 45, Mar. 1961, p. 36-40.

Analysis of metal samples, Fe ores and metallurgical slags. Effect of grain size on the intensity of refracted X-rays. Preparation of ore samples, including grinding, pressing of compacts or making a "glass" by melting the ore powder with borax or potassium pyrosulphate. (S11p, 2-59, M20; Fe, RM-n, RM-q)

423-S. (Russian.) Determination of Beryllium in Bronze by Fluorescence. A. I. Cherkesov and T. S. Zhigalkina. Zavodskaya Laboratoriya, v. 27, June 1961, p. 658-659.

Use of 3-oxy-2-naphthoic acid as a fluorescent reagent for quantitative determination of Be without separating out Al, Fe and Cu. 4 ref. (S11g, P17f; Be, Cu-s)

424-S. (Russian.) Complexometric Method for Determination of Zinc in Aluminum Alloys. L. M. Budanova and T. V. Matrosova. Zavodskaya Laboratoriya, v. 27, June 1961, p. 661-662.

A mixture of ammonium-fluoride and tartaric acid is used to form complexes for determination of Zn by titration using the volume-trilonometric method. 5 ref. (S11j, Zn, Al-b)

425-S. (Russian.) Photocolorimetric Determination of Columbium in Titanium and Aluminum Alloys With the Reagent Arsenazo. E. I. Nikitina. Zavodskaya Laboratoriya, v. 27, June 1961, p. 663-666.

Method for forming a quantitative colored Cb complex with the reagent arsenazo in the presence of H_2SO_4 and tartaric acids. Optical density of the photographs. 4 ref. (S11a; Cb, Ti-b, Al-b)

426-S. (Russian.) X-Ray Analysis of Tempered Heavy Machine Parts. B. A. Brusilovskii. Zavodskaya Laboratoriya, v. 27, June 1961, p. 699-701.

Development of an X-ray camera for determining the quantity of retained austenite in the outer layer of a heavy machine part. Simultaneous photographic comparison with the standard. (S11p, 1-52, N8n, T7; ST)

427-S. Iron Ore Analysis Utilizing Neutron Capture Gamma-Rays. R. C. Greenwood, J. Reed and C. A. Stone. American Nuclear Society, Transactions, v. 4, June 1961, p. 127.

Use of scintillation detector with a coincidence circuit to determine percentages of Si, Al, Mg, Mn, Ca and Fe indicates that the technique is not practicable. (S11, S19, 1-54; Fe)

428-S. The Electromagnetic Inspection of Production Quantities of Tubing Used in Some Reactor Applications. C. J. Renken. American Nuclear Society, Transactions, v. 4, June 1961, p. 137.

Electromagnetic and ultrasonic testing of Zircaloy-2, stainless steel and Croloy steel tubing to locate such defects as radial cracks, inclusions, thickness variation, poor welding and laps. (S13, S14, T11; 4-60, 9-69, 9-71)

429-S. The Non-Destructive Testing of Zircaloy Reactor Process Tubes for High Pressure, High Temperature Service. R. B. Socky. American Nuclear Society, Transactions, v. 4, June 1961, p. 137-138.

Extruded tubing tested by ultrasonic flaw detection, fluorescent penetrant, radiography and autoclaving to insure structural integrity and corrosion resistance. (S13g, S13k, R11, 1-54, T11; Zr-b, 4-60)

430-S. Development of Ultrasonic Techniques for the Remote Measuring of the Homogenous Reactor Test Core Vessel Wall Thickness. R. W. McClung and K. V. Cook. American Nuclear Society, Transactions, v. 4, June 1961, p. 140.

Both resonance and pulse reflection methods are evaluated for determining wall thinning due to corrosion and erosion of a Zircaloy-2 vessel. (S13, S14, R11, T11, 2-67; Zr-b)

431-S. Chemical Stability of UO_2 in Reactor Water. C. N. Spalaris. American Nuclear Society, Transactions, v. 4, June 1961, p. 146-148.

Nuclear reactor fuel checked by chemical analysis, X-ray diffraction and metallography for erosion and oxidation. (S13, R11, T11, 2-67; U)

432-S. Further Studies on the Deformation of Thin Cladding by UO_2 Thermal Expansion. M. F. Lyons. American Nuclear Society, Transactions, v. 4, June 1961, p. 148-149.

Al and stainless steel cladding are studied to correlate data relating the observed capsule outside diameter growth to operating heat flux and the observed UO_2 growth to the clad restraining force. (S14, T11, 2-67; Al, SS)

433-S. Dimensional Studies of Stimulated Experimental Gas-Cooled Reactor Fuel Elements at Elevated Temperatures. W. R. Martin. American Nuclear Society, Transactions, v. 4, June 1961, p. 149-150.

X-ray and isotope radiography study of expansion, plastic strain and fracture of UO_2 encapsulated in type 304 stainless steel while subjected to cyclic heating to 4000° F. 5 ref. (S13, T11, 1-54, 2-62)

434-S. Polarographic Methods for the Analysis of Acid Gold Alloy Plating Solutions. Arnold H. Craft and Karl Schumpelt. Plating, Mar. 1961, p. 277-279.

Methods for separating Au from Ni, Co and In. Comparison of results by polarographic and standard analytical methods. (S11f, S11m, L17a; Au, Ni, Co, In)

435-S. Vacuum Analysis of Certain Metals. Wild Barfield Heat-Treatment, Journal, v. 8, Mar. 1961, p. 11-14.

The N, O and H gas content of brass, Al and Ti are analyzed by a vacuum fusion gas analyzer at high temperatures (1100-1800° C.) Results are more regular and can be evaluated accurately to finer limits than chemical analytic methods. (S13, 1-66, 1-73, 9-51; Cu-n, Al, Ti)

436-S. (German.) Radiation Defects on Alpha-Irradiated Copper Surfaces. W. Marth. Kerntechnik, v. 3, July 1961, p. 318-323.

Surface irradiation of Cu bars (99.98% Cu) by alpha particles and subsequent investigation of surface structure by electron microscopic and X-ray diffraction techniques, using a new replica method, which furnishes several replicas from the same specimen. (S19, 2-67; Cu)

437-S. (German.) New Ways of Nondestructive Testing in Metallurgy. Ernst Schiebold. Neue Hutte, v. 6, July 1961, p. 416-430.

Examination of metal parts by X-ray and gamma radiation using Co^{60}, Ir^{192}, Cs^{137} and Tm^{170} as radiation source. Testing technology including design of equipment and interpretation of results. (S13e, 1-53)

438-S. (Russian.) Temperature Measurement During Growth of Metal Crystals in the Melt. V. T. Borisov and A. I. Dukhin. Fizika Metallov i Metallovedenie, v. 11, June 1961, p. 893-898.

Oscillographic and photographic measurement of temperature changes on the borderline of the division of phases during crystallization of Cd-Cu in Ar. Coefficient of thermal conductivity and specific heat. 5 ref. (S16a, N12, P11h, P12r, 2-66; Cd-b, Cu)

439-S. Rapid Analytical Methods for Determining Nonferrous Material in the Foundry. A. Bianchini and L. Alladio. Fonderia Italiana, v. 10, July 1961, p. 283-287.

Methods for rapid colorimetric and complexometric determination of Zn, Mg, Ca and Pb in limestones, bronzes, brasses, ZnS, slags, $(ZnOH)_2 SiO_3$ and Al-Mg alloys. Considerations of accuracy, safety and economy. (S11, E25, 1-53)

440-S. A Simple Interferometer for the Precise Measurement of the Straightness of Cylindrical Surfaces. R. G. H. Hall. Machinery (London), v. 99, Aug. 23, 1961, p. 444-448.

Technique is applied to brass cylinders with an accuracy of ± 5 microinches. Method of determining error and factors influencing the accuracy of the measurement. 4 ref. (S14d, 1-53)

441-S. (German.) Nitrogen Alloys of the T-Metals (Transition Metals) Mn, Fe, Co and Ni With Mg, Al, Zn and Cd. Hans Stadelmaier and Tong S. Yun. Zeitschrift fur Metallkunde, v. 52, July 1961, p. 477-480.

Analysis of nitrogen alloys, obtained by nitriding binary metal alloys in H_2/NH_3 atmosphere, for the presence of cubic nitrides using X-ray (Cu and Fe K-alpha radiation) and chemical methods. Measurement of lattice parameters of the identified phases. (S11, M26q, N15d; Mn-b, Fe-b, Co-b, Ni-b, Mg, Al, Zn, Cd, N)

442-S. Radiography--Bottleneck or Blessing. George O'Brien. Nondestructive Testing, v. 19, July-Aug. 1961, p. 265-266.

Use of a Kodak Industrial X-Omat Processor, an automatic film processing machine, to speed up X-ray inspection of nuclear reactor and missile components. (S13e, 1-52, T11, T24e; 7-51)

443-S. Detecting Service Failures in Power Plants. Helmut Thielsch. Nondestructive Testing, v. 19, July-Aug. 1961, p. 252-259.

Radiographic, ultrasonic, dye penetrant and magnetic particle inspection of boilers, turbines, piping, pipe supports and hangers, valves, fittings and shafts to prevent failures caused by thermal or mechanical shock or fatigue, corrosion, erosion, creep, cracking or rupture. 5 ref. (S13, T7, T26q, W11; 4-60)

444-S. Evaluating One-Half Million Pounds of Zirconium Sponge. M. D. Carver and H. Kato. U. S. Bureau of Mines, Report of Investigations 5696, 1960, 14 p.

Purity and metallurgical properties of test ingots from 259 lots of Kroll process Zr sponge, as determined by etching, Brinell hardness tests and spectrographic and chemical analyses. Review of methodology of analysis and effects of ingot production methods on impurity levels. (S11;Zr)

445-S. (Translation-ConBur.) Polarographic Determination of Zinc in Granulated Slags After Separation by Contact Reduction With Metallic Magnesium. P. N. Kovalenko and L. F. Bashkova. Journal of Applied Chemistry of the USSR, v. 33, Nov. 1960, p. 2437-2441.

Optimum conditions of temperature, pH and solution concentration for complete contact precipitation and subsequent determination of Zn in slags containing Fe ions. 20 ref. (S11m, C27, 1-52; Zn, RM-q)

446-S. (Translation-ConBur.) Densitometric Method for Determining the Thickness of Protective Films on Metals. I. V. Krotov and V. V. Grinina. Journal of Applied Chemistry of the USSR, v. 33, Nov. 1960, p. 2569-2571.

Thickness and density of films on Cu, phosphatized Al, phosphatized Zn and anodized Al are determined by making measurements with a pycnometer and using a simple formula which does not require knowledge of the film's composition. 22 ref. (S14j, 1-54; 14-62)

447-S. Wire Rod Defects--Their Occurrence and Detection. G. Earnshaw. Wire World International, v. 2, Oct. 1960, p. 233-238.

Importance of detecting defects in steel rod before feeding into high-speed wiredrawing machinery. Methods of testing for a variety of surface and structural defects occurring during steelmaking such as pipe, inclusions and segregated impurities. (S13; ST, 4-55)

448-S. (French.) Disadvantages to the Steel Producer of Restrictive Specifications. F. Pichon and F. Bourdillon. Revue de Metallurgie, v. 58, June 1961, p. 523-526.

Problems arising from the specification of a certain composition such as low C, high Mn, or specified quantities of Si, noble elements, S or P, or of a certain process such as killing with Al, as they affect economic production. (S22, 2-60)

449-S. (Spanish.) Determination of Antimony in Technical Alloys. M. E.

Garate and F. Burriel-Marti. Revista de la Universidad Industrial de Santander, v. 3, Jan. 1961, p. 13-16.

Dissolving of Sb alloys containing Cu, Fe, Sn, Pb, Zn and As in a mixture of HNO_3 and hydrofluoric acid. Determination of Sb by electrometric titration after addition of $KBrO_3$ and HCl indicating that only As has an interferring effect. 4 ref. (S11j; Sb-b)

450-S. Radiographic Examination of Steel Welds--New Mobile Linear Accelerator. Australasian Engineer, v. 52, July 1961, p. 57, 73.

X-ray examination of pressure vessels for nuclear power stations during construction using a mobile 4, 300, 000-v. linear accelerator which can be rotated about both horizontal and vertical axes. (S13e, T11, T26q; ST, 7-51)

451-S. Separation of Hafnium From Zirconium. Technical News Bulletin (National Bureau of Standards), v. 45, Aug. 1961, p. 137.

Separation for analysis obtained by using a strong quaternary-amine anion-exchange resin column with diluted sulphuric acid as eluting solution. (S11f, 1-54; Hf, Zr)

452-S. Analytical Chemistry of the Rare Earths. Charles V. Banks and Donn W. Klingman. Chapter 23 from "The Rare Earths". John Wiley & Sons, Inc., New York 16, 1961, p. 570-593.

Review of literature and techniques including analysis of ores and minerals, separation and the determination and analysis of the rare earths, their oxides, their fluorides and their alloys. 250 ref. (S11, 10-54; EG-g45)

453-S. Analytical Spectroscopy of the Rare-Earth Elements. Velmer A. Fassel. Chapter 24 from "The Rare Earths". John Wiley & Sons, Inc., New York 16, 1961, p. 594-613.

Optical absorption, optical fluorescence, optical emission and X-ray fluorescent spectra are discussed as they apply to the analysis of rare-earth mixtures, to the appraisal of rare-earth purities and to the determination of rare earths in other matrices. 33 ref. (S11, P17e, 1-53; EG-g45)

454-S. (German.) Investigation of Silicate Inclusions in Cast Iron. Gyula Nandori. Freiberger Forschungshefte, no. B 59, 1961, p. 122-131.

Microscopic investigation of cast iron with high Si (2.27-2.76%) and Mn (0.36-3.5%) content sampled during test refining in an acid induction furnace at 1480° C. (S11e; CI, Mn, Si)

455-S. (German.) Microchemical Determination of Carbon in Isolated Microstructure Components. Hans Malissa, Marta Storck and Reinhold Gattringer. Archiv fur das Eisenhuttenwesen, v. 32, Aug. 1961, p. 525-528.

Microanalysis of carbon steel and 90 Mn V 8, 115 CrV 3 and X 40 MnCr 18 steel by volumetric and conductometric techniques. (S11j, S11m, 1-54; CN, SS)

456-S. Non-Destructive Method of Gauging Electrodeposited Nickel Layers. P. M. Reynolds. Journal of Scientific Instruments, v. 38, Aug. 1961, p. 313-317.

Gaging thickness of industrial coatings of Ni on steel or Cu-coated Zn or steel within close tolerances by a thermoelectric instrument. (S14c, 1-52; Ni, 8-62)

457-S. Report of the Working Group "R" (Roughness) of the International Institution for Production Engineering Research (C.I.R.P.). Ing. E. Bickel and Ing H. V. Weingraber. Microtechnic, v. 15, July 1961, p. 79-84.

Review of standards and methods of measuring surface roughness and standards of evaluating commercial roughness measuring instruments. 16 ref. (S15, 1-53)

458-S. (French.) Nondestructive Testing of Iron and Steel. L. Beaujard. Industrie Nationale, no. 2, 1961, p. 25-34.

Flaw detection methods including electromagnetic testing of billets used in the manufacture of rolled wire and ultrasonic testing of mild steel billets and thin sheets. (S13g, S13h; ST)

459-S. Eddy Currents Check Tubing On-Line. H. N. Nerwin. Control Engineering, v. 8, Oct. 1961, p. 119, 121.

Equipment design and operating principles of an inspection apparatus which continually inspects and automatically cuts off welded steel tubing with oxidized or chipped weld zones using induced eddy currents. (S13h, 1-52; ST, 4-60, 7-51)

460-S. (German.) Chemical Analysis of Nickel in Copper Alloys. W. Thaler. Metall, v. 15, Sept. 1961, p. 880.

Dissolution of sample in HNO_3, filtration of Sn and Sb precipitates, electrolytic separation of Cu and Pb, precipitation of Ni by dimethylglyoxim and titration in ammoniac solution by Titriplex III using Murexid as indicator. (S11; Cu-b, Ni)

461-S. Investigation of Refractory Metals Processing (Problems in Refinement of High Vacuum Analytical Techniques). G. A. Picklo, Jr., and D. I. Walter. Report of NRL (Naval Research Laboratory) Progress, Sept. 1961, p. 45-46. (Available as PB 171322 from U. S. Office of Technical Services, Washington 25, D. C.) $1.25.

Vacuum fusion, using high-purity Ni as flux, hot extraction at 1900° C. and chemical analysis methods are compared for determining oxygen pick up and oxygen level of specimen pellets of Mo exposed to high temperature atmospheres for various time. Effect of specimen geometry on surface oxidation measurements. (S11f, R1h, 1-73, 3-73; Mo, EG-d37)

462-S. Cast Nuclear Components Radiography by Means of Kilocurie Cobalt Sources. Richard Lent. Modern Castings, v. 40, Oct. 1961, p. 118.

Heavy section radiography of steel sections up to 12 in. thick using newly developed Co isotopes enriched to a high specific activity in high neutron flux reactors. (S13e, 1-59, T11; ST, Co)

463-S. Use of Blast Furnace Probes. J. C. Agarwal, H. R. Pratt and R. H. White. U. S. Steel Corp. Technical Paper, Science and Technology, no. 32, 1961, 12 p.

Sampling blast furnace gases and temperature and pressure measurement using a probe at various points across the diameter of the stack. Data are presented indicating gas burden and path in the stack with analysis in relation to reduction reactions. (S12h, D1, D11, 1-52)

464-S. The Determination of Metallic Zinc by Measurement of Hydrogen Evolution. G. Lindley. Laboratory Practice, v. 10, Sept. 1961, p. 628-629.

Determination of the metallic Zn content of Zn-ZnO oxide mixtures by measuring the volume of H_2 evolved from a dilute acidic solution containing 15% H_2SO_4 and 0.2% $NiSO_4$ as catalyst, at 298° K. and 1 atm. of pressure. Details of construction of the specially designed reaction vessel-gas burette unit are given. (S11, 1-54; Zn)

465-S. A New Technique Using a Transmission Interferometer. D. A. Parker and C. K. V. Owen. Machinery Lloyd (Overseas Edition), v. 33, Sept. 30, 1961, p. 42-43.

Surface roughness of gear cutters, gear teeth, steel disks and inaccessible areas is measured by use of a transparent replica. (S15j, 1-54)

466-S. Some Experiences in the Use of a Wild Barfield NRC Model 912 Vacuum Fusion Analyser. G. L. Miller and J. A. Caldwell. Wild Barfield Heat-Treatment Journal, v. 8, Sept. 1961, p. 2-6.

Determination of O and H content in Ta, Cb, Mo, W, tungsten-carbide, titanium-carbide, Cr, ferrotungsten, ferrocolumbium, Fe and Ni using vacuum fusion analysis at 1650-1850° C. (S11r; Ta, Cb, Mo, W, Ti, Cr, Fe, Ni, O, H)

467-S. Colorimetric Determination of Trace Amounts of Aluminium in Steel. D. Blair, K. Power, D. L. Griffiths and J. H. Wood. Talanta (International Journal of Analytical Chemistry), v. 7, Nov-Dec. 1961, p. 80-89.

Process includes preliminary separation of Fe, Ni, Cu and Mo by Hg cathode electrolysis. Residual Fe is then removed by extraction of cupferrate with chloroform; excess cupferron is then destroyed, the solution is neutralized, acid is added and the aluminum-nitrated Solochrome Cyanine R complex is formed. 68 ref. (S11, 1-54; ST, Al)

468-S. The Determination of Oxygen, Hydrogen, Nitrogen and Carbon in Metals. W. G. Guldner. Talanta (International Journal of Analytical Chemistry), v. 8, Apr. 1961, p. 191-202.

Procedures include solution, evolution, bromination, emission spectrometric, isotope dilution, activation, infrared absorption, inert gas and vacuum fusion, hot extraction and carbon determination methods. Review of platinum bath and flux and intermittent bath injection alloying processes. 22 ref. (S11, 1-54, 10-54)

469-S. Activation Analysis of Manganese in Cast Iron and High-Alloy Steels. P. Bouten and J. Hoste. Talanta (International Journal of Analytical Chemistry), v. 8, May 1961, p. 322-329.

Irradiated samples are analyzed by integral counting and pulse height discrimination. 9 ref. (S11, 1-54; CI, SS, 14-70)

470-S. (Japanese.) Methods for Analysis of Traces of Elements in Aluminum. Pt. 2. Determinations of Lithium, Boron and Gallium. Shikao Hashimoto, Akinari Ichiryu and Sakae Kato. Sumitomo Light Metals Technical Reports, v. 2, July 1961, p. 36-46.

Analytical procedures are given for flame photometric determination of Li, absorbance measurement of B and fluorimetric determination of Ga, Al being separated from B and Ga by anion exchange and requiring no separation for analyzing Li. 38 ref. (S11; Al, Li, B, Ga)

471-S. Neutron Activation Analyzes Beryllium. Chemical & Engineering News, v. 39, Oct. 23, 1961, p. 52, 54.

Determination of micro and submicrogram metallic impurities in ultrapure Be by irradiation. Comparison of radioactivity of test sample and standard sample to calculate amount of Mn, B and Cd impurities. (S11q, 9-51; Be, 14-70)

472-S. Tinplate Thickness Measured at High Speed. Industrial Finishing (London), v. 13, Oct. 1961, p. 38.

Continuous gaging of coating thickness using fluorescent radiation emitted by the tinplate strip while traveling under a beam of X-rays. Process parameters and apparatus design incorporating two spectrometers within the analyzer head, ratio amplifier and recorder, lithium fluoride diffracting crystal and a Geiger counter. (S14e; ST, 4-53, Sn)

473-S. (Russian.) Application of Radioactive Isotopes for Fluorescence Analysis and Automatic Control of Ore-Dressing Products. N. N. Shumilovskii, L. V. Meltzer, A. A. Kalmakov and V. H. Teniaev. Izvestiya VUZ--Tsvetnaya Metallurgiya, Mar. 1961, p. 140-147.

Use of gamma radiation emitted by tritium, Sr and Y isotopes to determine the content of Fe and W in sintered ore concentrates. Granular size, humidity and inclusions are considered as they affect the precision of this method. 9 ref. (S11q, 1-54; RM-n, Fe, W)

474-S. Non-Destructive Testing Using X-Ray Radiation. R. S. Forbes. Instrument Practice, v. 15, Oct. 1961, p. 1249-1253.

Inspection of cans, alloy cylinders and welds to determine fluid level and structural and weld faults. (S13e, K9r, 1-53)

475-S. Electron Probe X-Ray Microanalysis. R. Kiessling and S. Baekstrom. Metal Treatment and Drop Forging, v. 28, Oct. 1961, p. 388-392.

Determination of segragation of small cementite grains and carbide and MnS particles in ball bearing steel etched in alkaline picrate. Influence of cooling speed from the austenitic range, annealing and Cr content. Determination of grain boundary phases and distribution of alloying elements in Al-Zn(5%)-Mg(1.2%) alloys containing Mn, Cr, Fe and Si. 12 ref. (S11e, M27f; ST, Al-b)

476-S. "Plate Waves" Simplify Continuous Ultrasonic Tests. Steel, v. 149, Oct. 23, 1961, p. 79.

Plate, strip, rod, wire and tube are tested for core defects and surface and interior cracks using ultrasonic waves produced from a low sound velocity medium which propagates along the surface. (S13g, 1-52; 4-53, 4-55, 4-60, 4-61)

477-S. (French.) Magnetic Testing of Welded Seams. Pratique des Industries Mechaniques, v. 47, Sept. 1961, p. 238-240.

Flaw detection by the magnetic powder method; "magnetography" combining a continuous magnetic test of the whole seam length with a recording oscillograph; or electromagnetic measuring of currents excited in a coil when the field of a magnet passed along the seam is disturbed by a flaw. (S13h, S13c; 7-51)

478-S. A Survey of Methods Used for the Inspection of Sheet Metal. R. F. Lumb. Sheet Metal Industries, v. 38, Oct. 1961, p. 743-748, 760.

Inspection of silicon steel sheet using electrical, ultrasonic and magnetic test methods. Evaluation of each method for hot and cold rolled specimens. 6 ref. (S14; ST, Si, 4-53)

479-S. (German.) Production Control in Manufacture of Metallic Fuel Elements. G. Matz and G. Schneider. Atomwirtschaft, v. 6, July-Aug. 1961, p. 377-381.

Control of raw materials by chemical analysis and of uranium rods and canning material after various production steps by ultrasonic testing, thermal cycling, density measurements and high-pressure testing for vacuum leaks in fabrication of Al-canned uranium fuel elements. (S13, S11, L22, T11g; U, Al)

480-S. Temperature Effects in Alternating Current Polarography. H. H. Bauer and P. B. Goodwin. Australian Journal of Chemistry, v. 14, Aug. 1961, p. 460-462.

Determination of the temperature coefficients of the heights of a-c. polarographic waves and d-c. steps in the presence of Cd, Tl, Sb, Cu, In, Pb, Sn and Zn. 7 ref. (S11m, 2-61)

SECTION T

APPLICATIONS of METALS in EQUIPMENT and INDUSTRY

1-T. Automobiles/What Materials Are Next? Pt. 2. Piston Engine Materials: The Trend Is to Aluminum. Robert J. Fabian. Materials in Design Engineering, v. 52, Nov. 1960, p. 147-148.

Comparison of Al to cast iron for applications in engine blocks, cylinder heads and crankcases. (T21; Al, CI, 17-57)

2-T. Automobiles/What Materials Are Next? Pt. 4. The Gas Turbine Engine: Still a Hot Materials Problem. Robert J. Fabian. Materials in Design Engineering, v. 52, Nov. 1960, p. 153-154.

Application of stainless steel, aluminized steel, Ni alloys and nodular cast iron in gas turbine engines. (T21b; CI-r, Ni-b, SS, ST, 17-57)

3-T. (Italian.) Use of Aluminum Alloys in the S. S. Leonardo da Vinci. Alluminio, v. 29, Sept. 1960, p. 410-414.

Application of Al alloys in ocean liner structures requiring high corrosion resistance. (T22; Al, 17-57)

4-T. (Italian.) Structural and Architectural Uses of Stainless Steel. Pt. 2. Alessandro G. Amoroso. Acciaio Inossidabile, v. 27, July-Aug. 1960, p. 466-480.

Use of stainless steel in prefabricated structural elements. (T26n; SS, 17-57)

5-T. (Italian.) Use of Stainless Steel in Nuclear Power Plants. Acciaio Inossidabile, v. 27, July-Aug. 1960, p. 484-485.

Use of stainless components in a system for decontamination of radioactive liquid waste from a Swedish reactor and in the reactor of the first nuclear-powered transatlantic vessel. (T11; SS, 17-57)

6-T. (German.) Zirconium and Zirconium Alloys as Construction and Canning Materials in Ship Reactor Construction. L. Rangert. Atomwirtschaft, v. 5, Sept. 1960, p. 408-411.

Properties of Zr and Zr alloys containing Sn, Cb and Mo or Cu, with emphasis on corrosion resistance and neutron absorption. Chipless shaping and machining; welding and soldering of Zr alloys. 8 ref. (T11, R-general, G17, K-general; Zr-b, Cb, Cu, Mo, Sn, 17-57)

7-T. "Pyrotenax"--a Cable With Many Points of Interest. Australasian Manufacturer, v. 45, Oct. 22, 1960, p. 76-78.

Mechanical properties and corrosion resistance at 1000° C. of Cu electric cable insulated with MgO and sheathed in seamless Cu. (T1b; Cu)

8-T. Alloy Wire Improves Brake Power. Iron Age, v. 186, Dec. 1, 1960, p. 132-133.

Use of precipitation heat treated A-286 superalloy wire in the return springs of jet aircraft brakes to obtain stress-temperature stability up to 1000° F. (T7c, T24; SGA-h, 4-61, 17-57)

9-T. Optimum Tolerances of Sheet Materials for Flight Vehicles. George A. Hoffman. Journal of Engineering for Industry, Series B (American Society of Mechanical Engineers, Transactions), v. 82, Nov. 1960, p. 363-368.

Method is derived for economically specifying optimum tolerances for Ti, Al, Be and steel sheet. 8 ref. (T24; Ti, Al, Be, ST, 4-53, 17-55, 17-57)

10-T. Production of Frame Grid Valves. Wire Industry, v. 27, Oct. 1960, p. 999, 1002.

Welding, winding and painting of electronic tube grids composed of Mo support rods and W wire. (T1j; Mo, W, 17-57)

11-T. (French.) Use of Aluminum in the Automobile Industry. Jacques Verne. Revue de l'Aluminium, v. 37, July-Aug. 1960, p. 869-878.

Use of Al and Al alloy castings, rolled stock, sheet and strip in cylinder heads and other automotive applications. (T21; Al-b, 17-57)

12-T. Good Design Pays Off in Zinc and Gray Iron Castings. Metal Progress, v. 78, Dec. 1960, p. 122-123.

Emphasis on good design and careful selection of the method by which parts are made can lead to economies in production and a more useful product. (T-general, 17-57; CI-n, Zn, 5-60, 5-61)

13-T. 1250 Tons A-7 Structural Steel Fabricated. Canadian Metalworking, v. 23, Nov. 1960, p. 40-41.

Use of medium structural (ASTM A-7) and high strength low alloy (ASTM A-242) steels in the fabrication and erection of a Canadian missile base. (T26; AY, SGB-a, 17-57)

14-T. New Trends in the Use of Steel. H. Odenhausen. Acier-Stahl-Steel, v. 25, Oct. 1960, p. 399-400.

Use of rolled steel in light weight building construction. Importance of the modulus of elasticity in calculating collapse loading conditions, buckling and torsional failure. Surface protection of structural steel. 3 ref. (T26n, Q21, L-general; ST, 4-57, 17-57)

15-T. The All-Aluminum Engine. Light Metals, v. 23, Nov. 1960, p. 298-301.

Use of pressure cast Al cylinder blocks with cast iron linings in automobile engines. (T21b; Al, CI, 5, 17-57)

16-T. Materials in Atomic Energy. J. G. Ball. Nuclear Power, v. 5, Dec. 1960, p. 79-90.

Metallurgical characteristics and physical properties of steels, reactive and light metals and organic and inorganic compounds with attention to irradiation behavior. Applications as fuels, cladding, moderators and coolants, absorbers, shielding and other components of atomic reactors. (T11, P-general, Q-general, 2-67; ST, EG, 17-57)

17-T. Solving Refinery Corrosion Problems With Aluminum. Corrosion, v. 16, Dec. 1960, p. 16-17.

Various applications of Al in the refining industries to control corrosion. These include offshore and marine applications, heat exchangers, piping and tubing, tank and transportation uses, tower internals and cryogenic equipment. (T29n; Al-b, 17-57)

18-T. (Italian.) New Superalloys for Spiral Springs. Alberto Oreffice. Macchine, v. 15, Sept. 1960, p. 831-833.

Mechanical properties of heat and corrosion resistant Rene 41 Ni alloy, L 605 Co alloy and 318 A Ti alloy wire. Recommended heat treatments; applications in aircraft engines. (T7c, T24b, Q-general; Ni-b, Co-b, Ti-b, 17-57, SGA-b)

19-T. Brazed Carbides Are Not Passe. C. R. Christen. Carbide Engineering, v. 12, Dec. 1960, p. 16-19.

Use of brazed carbide tips in machining operations such as roll turning and tool grinding. Comparative operation costs for throwaway carbide tip, large brazed tip and new small brazed tip. (T6n, G17; 4-69)

20-T. Metallurgy in Nuclear Power Technology. Fuel Element Canning Materials. Pt. 1. J. C. Wright. Metal Treatment and Drop Forging, v. 27, Nov. 1960, p. 449-454.

Investigation of various metals, especially Zr, as fuel element canning materials. Extraction and fabrication procedures, with emphasis on separation of Hf. (T11g; Zr, 17-57)

21-T. Ni-Resist Ductile Iron Rotary Tables for Missile Guidance. Inco Nickel Topics, v. 13, no. 8, 1960, p. 4-5.

Rotary tables of D-3 Ni-Resist iron with 28% Ni content used as azimuth indicators in missile aiming systems. The alloy is selected on the basis of controlled expansion, resistance to corrosion and toughness. (T24e; CI-r, Ni, 17-57)

22-T. Stainless Ribbon Wraps Rocket Thrust Chambers. Inco Nickel Topics, v. 13, no. 8, 1960, p. 11.

AM-350 stainless steel strips and ribbon used to fabricate thrust chambers for testing high-energy liquid propellents. (T24e; SS, 4-53, 17-57)

23-T. A Study of Ceramic Cutting Tools. H. D. Moore and D. B. Kibbey. News in Engineering, v. 32, Nov. 1960, p. 13-18.

Testing of ceramic cutting tools for tool wear and fracture failure by cutting C1405 steel logs at varying speeds, feed rates and tool geometry. Method of analyzing test variables to determine the effects of use conditions on tool life. (T6n, G17; NM-f, ST)

24-T. Aluminium in Railway Rolling Stock. Aluminium Courier, Sept. 1960, p. 4-15.

Applications of Al-Zn, Al-Mg-Si, Al-Cu and Al-Zn-Mg alloys in railroad cars and components. (T23; Al-b, Cu, Mg, Si, Zn, 17-57)

25-T. Materials of Construction for Chemical Plant--Copper. S. Baker. Chemical & Process Engineering, v. 41, Nov. 1960, p. 513-518.

Typical mechanical properties and corrosion resistance of a number of Cu alloys, brasses, tin bronzes and gunmetals, Al bronzes, Cu-Ni alloys, Cu-Si alloys and Be-Cu. (T24; Cu, 17-57)

26-T. Transition From Boundary to Mixed Friction. R. L. Lenning. Lubrication Engineering, v. 16, Dec. 1960, p. 575-582.

Influence of base oil viscosity, surface finish, load and polar additives on the surface velocity at which the transition from sliding to mixed friction occurs in flat sliding bearings composed of SAE 52100 steel and cast iron. (T7d, 18-73; CI, ST)

27-T. Today's Ball Bearings. Nicholas P. Chironis. Product Engineering, v. 31, Dec. 12, 1960, p. 63-78.

Design and performance characteristics of ball bearings. Bearing life and load capacities, speed and temperature limitations of ball bearings. Evaluation of bearing materials including Cu-Be alloys, superalloys and stainless, tool and bearing steels. (T7d, 17-51, 17-52; SGA-c, Cu, Be, ST, SGA-h, 17-57)

28-T. Bright Future Forecast for Aluminum Castings. Jack H. Schaum. Modern Castings, v. 39, Jan. 1961, p. 48-50.

Technological and statistical growth. Applications, with emphasis on automobile parts. (T21; Al, 5, 17-57)

29-T. (Japanese.) Precipitation Hardening Stainless Steel for Springs. University of Tokyo, Engineering Research Institute, Annual Report, v. 19, Sept. 1960, p. 92-95.

17-7 pH is considered to be superior to 15Cr-7Ni with Mo and Al additions. Steels containing Ti or W are not suitable for springs since their hardness cannot be reduced by any tempering treatment considered. (T7c, J27; SS)

30-T. Sintered Tungsten Carbide Dies in the Wire Industry. E. T. Miller. Wire and Wire Products, v. 35, Dec. 1960, p. 1668-1670.

Application in drawing wire of stainless steel, high carbon steel, low carbon steel, Cu, Al and galvanized iron. Method for polishing dies using a mixture of silicon carbide and kerosene. Prevention of scoring by die rotation. (T6r, F28; 6-69, 17-57)

31-T. Multiple Function Fasteners. Machine Design, v. 32, Dec. 22, 1960, p. 118-119.

Use of fasteners composed of heat treated spring steel as electrical conductors and spacers and for clamping operations. All incorporate some form of screw-locking impression or retaining device which eliminates need for secondary fastening elements. (T7f; SGA-b, ST)

32-T. Gas-Cooled Reactors. Power Reactor Technology, v. 3, Sept. 1960, p. 58-65.

Principal characteristics of various gas-cooled reactors with emphasis on properties of fuel materials such as UO_2, UC, graphite and BeO and of cladding materials composed of stainless steel, Be, graphite and SiC. (T11; Be, NM-k36, SS, U, 17-57)

33-T. Organic-Moderated Reactors: Evaluation of Irradiated Experimental Fuel Elements. Power Reactor Technology, v. 3, Sept. 1960, p. 66-67.

The stability of experimental fuel elements of the plate type having finned Al cladding bonded to a uranium alloy

core is evaluated by irradiation testing in an organic moderated reactor. (T11g, 2-67; U-b)

34-T. GM Plunges Into Aluminum. Vearl A. Williams. Production, v. 47, Jan. 1961, p. 60-68, 70.

Production of engine and body parts by die casting and low pressure and semi-permanent molding of Al. (T21, E13, E19; Al, 17-57)

35-T. (English.) Stainless Steel for Cutlery. Masayoshi Togaya and Kozo Kishi. Osaka University, Technology Reports, v. 10, Mar. 1960, p. 481-487.

Investigation of optimum chemical compositions and heat treatment and hot working parameters for obtaining good cutting ability and durability. Comparison of high carbon stainless with low carbon ferritic stainless for machinability. (T6q, F-general, G17k, Q-general, 2-60, 2-64; SS, 17-57)

36-T. Frame Grid Valve Manufacture. J. M. Waldram. Engineer, v. 210, Nov. 28, 1960, p. 638-639.

Mo is used for the production of backbones in frame grid electron tubes. Each backbone is tested to withstand an exerted force of 4 lb. and processing temperatures to 900° C. The frames and the wires are Au plated to reduce grid emission. (T1; Mo, 17-57)

37-T. Magnesium Castings in Europe. E. Sayles. Metal Progress, v. 79, Jan. 1961, p. 97-100.

Pressure die casting in water cooled molds gives sound parts of excellent surface at high production rates. Other manufacturing advantages make them competitive with Al where weight or inertia are important considerations. (T-general, 17-57; Mg-b, 5)

38-T. Titan: Top in Aluminum. Aluminum Bulletin, Autumn 1960, p. 9-13.

Application of 2014 Al alloy in missile fuel tanks to provide high strength to weight ratio. Alloy is joined by a welding process employing an inert gas shielded tungsten arc with Al filler wire. Excess metal is removed by chemical milling processes controlled by magnetic tape. (T24e, K1d; Al, 17-57)

39-T. Light Metals Plus Careful Stress Analysis Reduce Weight of Missile Transporter. R. L. Candlish. Design News, v. 16, Jan. 2, 1961, p. 40-41.

Applications of steel, Al and Mg alloys and plastic materials in the powertrain, radiator, engine mounts, fly wheel housing, transmission cases, chassis and wheels. (T24e; Al-b, Mg-b, ST, 17-57)

40-T. American Automobile Developments and Their Implications to Founders. Foundry Trade Journal, v. 109, Dec. 22, 1960, p. 787-792.

Increasing use of Al in engine blocks, transmissions and crankcases; advantages and disadvantages over the use of cast iron; foundry techniques; comparison of the properties of cast iron and Al in automotive applications. (T21b; Al-b, 17-57)

41-T. Giant Pumps for Atomic Power Plant Use Nickel Alloys. Inco Nickel Topics, v. 14, Jan. 1961, p. 4.

Design of two vertical pumps having shaft and shaft coupling composed of Type 303 CrNi stainless steel, stationary impeller shroud of CF-20 (19-9) CrNi stainless steel castings, journal sleeves of "S" Monel NiCu alloy with hardness 275-350 Brinell as cast and impeller of cast Ni-Al bronze. Materials selection is based on greater resistance to corrosion. (T11p; Cu-b, SS-e, Ni, 17-57)

42-T. Uses of Double-Seal Stainless Valves Increasing. Inco Nickel Topics, v. 14, Jan. 1961, p. 10.

Application of 316 and 303 stainless and a 20% Ni-29% Cr-Mo alloy in corrosion, temperature, abrasion and pressure resistant ball valves. (T7b; SS-e, Ni, 17-57)

43-T. Aerojet-General Announces Successful Firing of Minuteman Engine With Titanium Alloy Case. Crucible Titanium Review, v. 8, Dec. 1960, p. 2-5.

Fabrication of light weight rocket engine casing from Ti alloy containing 6% Al and 4% V. (T24e, G-general; Ti-b, 17-57)

44-T. Red Metal Right for Modern Car Radiators. Copper & Brass Bulletin, Nov. 1960, p. 6-7.

Application of electrolytic Cu and cartridge brass strip in car radiators and heaters. (T21b; Cu, 17-57)

45-T. Platinum Alloys in the Production of Viscose Rayon. J. W. S. Hearle and A. Johnson. Platinum Metals Review, v. 5, Jan. 1961, p. 2-8.

Review of the production of rayon. Application of Pt alloys in the manufacture of the spinning jet. Chemical resistance, electrical properties and mechanical properties of the spinning jet. (T29q, Q-general, R-general; Pt-b, 17-57)

46-T. New Uses for Metal Honeycomb. K. W. Hards. Metalworking Production, v. 105, Jan. 4, 1961, p. 11-12.

Applications of honeycomb materials in boat structures, radar towers and aircraft. (T24a, T22, X15q; 4-57)

47-T. A New Communication System. T. L. Richards. Copper, no. 10, Winter 1960, p. 10-11.

Helical wave guides are manufactured by closely winding a helix of enamelled Cu wire onto a mandrel and applying an epoxy resin coating to the turns to bond them together. Guides are used to transmit communications signals at very high frequencies. (T1, L26p; Cu, 4-60, 17-57)

48-T. Stainless Steel Features Design of New Lightweight Engine. Nat Wood. Western Metalworking, v. 19, Jan. 1961, p. 37-38, 40.

Design and construction of a new 4-cylinder, lightweight, high power automotive or marine engine featuring a block assembly fabricated of welded and brazed thin gage 302 stainless steel sheet. (T21b, T24b; SS, 17-57)

49-T. Sintered Reactor Materials. Metal Industry, v. 98, Jan. 20, 1961, p. 49-50.

Description of Binal, a sintered and wrought homogenous ductile material consisting of boron uniformly dispersed in an Al matrix. Applications. (T11; Al-b, B, 6-72, 17-57)

50-T. When Designing Journal Bearings. Bruce M. Dunham. Product Engineering, v. 32, Jan. 30, 1961, p. 46-50.

Factors of speed, load, operating temperature and lubricant viscosity as they affect lubrication of journal bearings composed of Sn, Pb, soft steel, Al, Cd, Cu, Ag plate, tin bronze, phosphor bronze, lead bronze and cast iron by various oils. (T7d, 18-73; Al, Ag, Cd, CI, Cu-b, Pb, Sn, ST)

51-T. Metallic Gaskets. Heber H. Dunkle and R. L. Gastineau. Machine Design, Jan. 19, 1961, p. 103-114.

Construction materials, seating stresses and selection factors for metallic gaskets. Data are given for corrosion resistance and minimum seating stress of Al, Cu, Fe, Monel and stainless steel. (T7, R-general; Al, Cu, Fe, Ni-b, SS)

52-T. Encouraging the Use of Copper. Engineer and Foundryman, v. 26, Nov. 1960, p. 47-48.

Recommendations for diameter, temper and sheathing of Cu tubing for outside and underground pipelines. (T26r, 15-61; Cu, 17-57)

53-T. The Contribution of Metallurgy to Electric Power Generation. L. Rotherham. Engineer, v. 211, Jan. 13, 1961, p. 44-47.

Application of carbon and stainless steels in rotors for alternators. Testing boilers composed of 18/12/1 Cb steel, 17/10/2 Mo steel, CrMo steel, MoV steel and CrMoV steel to determine influence of heat and pressure on creep properties, stress rupture properties and microstructure. (T1, T26q, Q3, 2-61, 3-74; CN, SS, 17-57)

54-T. Broaching With Cemented Carbides. C. Edgar. Machinery, v. 67, Feb. 1961, p. 109-115.

Composite broaching tool design, material selection and fabrication, with attention to brazing and clamping of the cemented carbide tip to the tool body. Influence of temperature on hardness in the carbides and control of built-up edges during machining of materials of various hardnesses by proper use of coolants and controlled cutting speeds. (T6n, G17d, K8; 6-69, 17-57)

55-T. (Italian.) Applications of Stainless Steel. Fonderia, v. 9, Nov. 1960, p. 509, 511.

Review of properties of stainless steels, with emphasis on Rex 58, FV 520 and high-Cr steels and their application in the aircraft industry. (T24; SS, 17-57)

56-T. Fuel Element Fabrication. Journal of Scientific & Industrial Research, v. 19A, Nov. 1960, p. 535-538.

A review of papers dealing with fuel element fabrication practice, developmental research, general and specific problems of the production and properties of materials and alloys used for fuel element fabrication or cladding, testing techniques and the economics of nuclear power production. (T11g, L22, 10-54)

57-T. Production of Nuclear Components in Lead and Graphite. S. C. Poulsen. Machinery (London), v. 98, Jan. 4, 1961, p. 4-14.

Production of Pb bricks for radiation barriers, graphite blocks and Pb spheres for handling tong ball-joints. Description of casting, machining and finishing operations. (T11; Pb, 17-57)

58-T. Honeycomb Excells for Mach 3 Wing. Jack C. Joanides, Stanley C. Mellin and Leslie M. Lackman. SAE Journal, v. 69, Mar. 1961, p. 62-64.

Construction of an aircraft wing using brazed PH-15-7 Mo steel honeycomb structure results in higher strength at lighter weight than an integrally stiffened skin structure composed of AM 355 steel or beta Ti. (T24a; SS, 4-57)

59-T. Spring Design Data. Harold C. R. Carlson. Wire and Wire Products, v. 36, Jan. 1961, p. 76.

Load and deflection design data for compression, extension and torsion springs. Torsional stress, corrected moment, maximum working stress and temperature and comparative costs are given for wire composed of phosphor bronze, brass, Be-Cu, carbon and alloy steels, 302, 316 and 431 stainless steels, Monel, K-Monel, duranickel, Inconel, Inconel-X, Colenium and Elgiloy. (T7c, Q25, 17-51; SGA-b, Cu-b, Ni-b, SGA-g, ST, 4-61, 17-57)

60-T. Pipework Engineering. S. C. Poulsen. Machinery (London), v. 97, Dec. 28, 1960, p. 1461-1465.

Description of cleaning, protective coating, bending, stemming and grinding operations on seamless steel tubing. (T26r, G6, G18, L-general; ST)

61-T. Metals and Fabrication Methods for the B-70. Wayne A. Reinsch. Metal Progress, v. 79, Mar. 1961, p. 70-78.

The speed and altitude of the B-70 results in skin temperatures of 450 to 630° F., which means that steel and titanium alloys must be used as structural materials. An all-brazed hydraulic system for operation at 450° F. and 4000 psi. gives considerable weight savings. Details on types of metals and the precision techniques employed in fabrication of the B-70. (T24, G-general, K8, 17-57; SS, Ti-b, TS, SGA-h)

62-T. Materials for Uncooled Rocket Nozzles. A. V. Levy. Metal Progress, v. 79, Mar. 1961, p. 81-83.

Though molybdenum and tungsten are being used today for uncooled rocket nozzles, rising temperatures are expected to bring in more durable graphites, carbides and ceramics. (T2p, 17-57; SGA-h, Mo, W, NM-f, NM-k36, 6-69)

63-T. Fabricating the Titan Propulsion System. W. M. Boam. Metal Progress, v. 79, Mar. 1961, p. 83-88.

In designing the engine for the Titan ICBM, engineers have come up with a complex but reliable package which mates metals and nonmetals. (T2p, K-general, K8, SS, AY, SGA-h, Ni-b, Al-b)

64-T. Dyna-Soar... A New Technology. Metal Progress, v. 79, Mar. 1961, p. 90-93.

In the fabrication of winged re-entry vehicles, engineers must apply revolutionary concepts to meet severe material requirements. (T24e, L-general, 17-57; SGA-h, EG-d)

65-T. Design and Manufacture of Reactor Vessels. D. K. Davies. Metal Progress, v. 79, Mar. 1961, p. 101-105.

Difficulties arise from ignorance about radiation damage to steel and welds from laminations and inhomogeneities in the plate, from lack of standardized test and inspection methods and from limited experience with operating reactors. (T11, T26q)

66-T. Trends in Materials for Reactor Control Rods. J. B. Giacobbe. Metal Progress, v. 79, Mar. 1961, p. 105-107.

Rods made from a Cd-In-Ag alloy and a stainless steel containing boron are being investigated in commercial

reactors. Rare earths also look promising. (T11j, 17-57; Hf, Ag-b, Cd, In, SS, EG-g)

67-T. Materials and Fabrication Methods for the Bomarc. R. H. Nelson. Metal Progress, v. 79, Mar. 1961, p. 107-114.

Backbone of the Bomarc is a series of tanks made from stainless steel and Al alloys. Ti spars support the control surfaces and the tail assembly is covered with a Mg alloy skin. (T24e; SS, Al, Ti, Mg)

68-T. Thin-Race Bearings. H. Alan Duguid. Machine Design, v. 33, Mar. 2, 1961, p. 87-92.

High precision, low friction bearings produced from 52100 alloy steel and stainless steels. (T7d; AY, SS, 17-57)

69-T. Spiroid Gearing. Pt. 2. Durability, Strength and Efficiency. Woodrow D. Nelson. Machine Design, v. 33, Mar. 2, 1961, p. 93-100.

Calculation of failure criteria for steel, Al, bronze and nickel bronze spiroid gearing. (T7a; Al, Cu-b, Ni, 17-57)

70-T. Pearlitic Malleable Iron. Machinery (London), v. 98, Feb. 8, 1961, p. 315-318.

Production of various motor components such as gears, clutch hubs, rocker arms and crankshafts from pearlitic malleable iron. Selective hardening of these components by heat treatment and quenching. Hardness, wear and bearing properties of the hardened parts. (T7, Q29n, Q9; CI-s, 17-57)

71-T. Metallurgy in Nuclear Power Technology. J. C. Wright. Metal Treatment, v. 28, Feb. 1961, p. 77-82.

Comparison of Al, Be, stainless steel and Zr as matrix elements for reactors. Preparation of internally restrained fuel elements by fusion or powder methods. (T11g; Al, Be, SS, Zr, 17-57)

72-T. Special Metals and the Rare Earths. Stephen Yih. Mining Congress Journal, v. 47, Feb. 1961, p. 92-94, 97.

Applications of W, Mo, Ta, Ti, Cb, Zr, Hf, W, B, Be, Hf, Eu, Gd and Sn in the electronics industry, nuclear reactor technology, missiles and space vehicles. (T1, T11, T24; EG-d37, EG-g, 17-57)

73-T. The Aluminum Engine--U. S. Developments. Light Metals, v. 24, Mar. 1961, p. 82-83.

Use of 303 Al alloy in cylinder blocks, generators and oil and water pumps to reduce corrosion, weight and machining time and increase tool life. (T21b; Al, 17-57)

74-T. (German.) Materials Used in the Pilot Atomic Power Plant "Kahl". E. Zastrow. Atomwirtschaft, v. 6, Jan. 1961, p. 66-72.

Chemical analysis, chemical corrosion resistance, mechanical properties, susceptibility to radiation defects and heat treatment of materials such as alloyed carbon steels with controlled Co content (plated with austenitic and stainless steel by rolling or welding, and nonplated); electrode material for welding; Zircalloy for fuel element coatings; and austenitic boron steel for control rods. (T11, Q-general, R-general, 2-60; ST, Zr-b, 17-57)

75-T. Aerospace Fasteners Use New Metals. J. L. Chinn. Materials in Design Engineering, v. 53, Mar. 1961, p. 110-113.

Advantages and limitations of Ti, Zr, Be and the refractory metals and their alloys as fastener materials. Data are given for mechanical and physical properties. (T7d, P-general, Q-general; Ti-b, Zr-b, Be-b, EG-d37, 17-57)

76-T. (Japanese.) Ceramic Tools. Hidehiko Takeyama. Japan Society of Mechanical Engineers, Journal, v. 63, Nov. 1960, p. 1427-1433.

Cermet and alumina tools are tested under working conditions on SNCM-8 Ni-Cr-Mo, SUS-2 13Cr stainless, S55C and S40C carbon, AISIC-1015, 1050, 1045 and 4615, SAE-1050, 4340 and 5135 steel, FC-27 cast iron and Ti to determine chipping and abrasion characteristics and tool life. (T6n, G17; ST, CI, Ti, 6-70, 17-52)

77-T. Fastening Aluminum. Pt. 3. How to Specify and Use Threaded Fasteners. F. L. Church. Modern Metals, v. 17, Mar. 1961, p. 62-82.

Dimensions, tolerances, corrosion resistance and mechanical properties of 2024-T4 Al alloy fasteners. Specifications for drilling and tapping holes of proper size in Al plate and shapes. Calculation of proper torque for assembly with electric and pneumatic drivers. (T7f, S22; Al-b)

78-T. Flexible Metal Tapes for High-Speed Mechanisms. Charles B. Hebeler. Product Engineering, v. 32, Feb. 20, 1961, p. 65-69.

Metal tapes for operating precision drive mechanisms from a remote source offer high strength-weight ratio and good fatigue properties. Design curves are given for tapes made of a new Co-Ni-Cr-Mo steel alloy containing 42.5% Co. (T-general, P-general, Q-general; Fe-b, Co, 17-51, 17-57)

79-T. Which Hose for High-Pressure Systems? John Lozzi. Product Engineering, v. 32, Feb. 20, 1961, p. 70-71.

Design criteria for selection of metals such as brass and stainless steel, fluorocarbon plastics and rubber for high and low temperature application and compatibility with various fluids as hose materials in high pressure systems. (T26r, 3-74, 17-51; SS, Cu-n, NM-d, 17-57)

80-T. High-Strength Steels for the Missile Industry. H. T. Sumsion, Editor. 276 p. 1961. American Society for Metals, Metals Park, Novelty, Ohio. $12.

Proceedings of the Golden Gate Metals Conference sponsored by the Golden Gate Chapter of the ASM, Feb. 4-6, 1960, San Fransico, Calif. Papers abstracted separately. (T24e; ST)

81-T. Materials and Fabricating Problems Associated With High-Strength Lightweight Homogeneous Pressure Vessels. L. J. Gilbert and J. A. Brown. Paper from "High-Strength Steels for the Missile Industry". American Society for Metals, Novelty, Ohio, 1961, p. 3-39.

Problems of homogeneous pressure vessel fabrication utilizing high-strength steels are discussed relative to the basic materials and the sequence of manufacturing operations. The unacceptable notch sensitivity of available commercial steels when heat treated to 210 ksi. yield strength or higher is considered with reference to and coordinated with microstructure, composition, heat treatment and processing variables. (T26q; ST)

82-T. Fabrication Techniques Applicable to Rocket Motor Cases. John H. Peters. Paper from "High-Strength Steels for the Missile Industry". American Society for Metals, Novelty, Ohio, 1961, p. 185-200.

Experience in the manufacture of dependable efficient flight-propulsion devices and its application to rocket motor case fabrication. (T2p)

83-T. A New Ultra-High-Strength Steel for High Performance Rocket Motor Cases. G. K. Bhat. Paper from "High-Strength Steels for the Missile Industry". American Society for Metals, Novelty, Ohio, 1961, p. 153-253.

Development of a new steel, based on experience derived from testing AISI 4137 and medium alloy H-11 steels. The developed steel is suitable in terms of good fabrication qualities characteristic of AISI 4100 steels, improved weldability, necessary hardenability, good bi-axial strength capability, including relative insensitivity to notch brittleness, and good reproducibility of results on vessels of all sizes including a 4 1/2 ft. diameter flight design test chamber. (T2p; ST, 17-57)

84-T. Producing Powder Metallurgy Parts. P. V. Schneider. Tool and Manufacturing Engineer, v. 46, Apr. 1961, p. 81-86.

Design, production and tool and die application of metal parts fabricated by powder metallurgy techniques. Cost, tolerance and factors affecting physical properties are compared with parts made from wrought materials. (T6n; 6-72, 17-57)

85-T. Beryllium Bolts Gain Strength. Iron Age, v. 187, Apr. 6, 1961, p. 107.

Chemical finishes and rolled threads are used to improve transverse ductility, fatigue resistance and shear strength of light weight Be bolts used in aircraft structures. (T7f, Q-general, T21, 17-57; Be)

86-T. Sapphire Whiskers for Safer Re-Entry. Missiles and Rockets, v. 8, Apr. 10, 1961, p. 36.

Formation of a composite having a high strength-to-weight ratio at 2000° F.

by impregnating molten Al with pure sapphire whiskers in a vacuum as by bonding the whiskers with powder Al by heating. Application as heat protective material on missiles. (T24e, 17-57; Al-b, NM-e, 7-59)

87-T. Light Metals, Sometimes Exotic Ones, Send Man Way Out. Ralph Gillespie. Detroit Engineering, v. 25, Apr. 1961, p. 25-27.

Mo, Be, Zr, Ti, W, Ta, Cb, Rene 41, Astroloy, Mg alloys and Al alloys having good thermal resistivity and emissivity are used to produce structures with an excellant strength to weight ratio. Applications in missiles, rockets and other space craft. (T24e, Q-general; SGB-a, EGA-39, EG-d37, SGA-h, 17-57)

88-T. Republic Tests Seals for 1000° F. Hydraulics. Salvatore Cannizzaro. Space Aeronautics, v. 35, Apr. 1961, p. 103-104, 106, 108, 110.

Composite metallic seals for use in hydraulic systems having an ambient temperature of 1200° F. and a liquid temperature of 1000° F. are developed using Ag impregnated Mo, 430 stainless steel filled with 84Ag-16In brazing alloy, Nu Die V and Rex AAA toolsteels and Haynes Stellite. (T4c, Mo-b, SS, TS, 7-59, 17-57)

89-T. Boilers and Heat Exchanger. Pipes and Pipelines, v. 6, Mar. 1961, p. 37-44.

Fabrication, composition, corrosion properties and application of ferrous and nonferrous materials for use in condenser tubes of boilers and heat exchangers. Design of boilers and heat exchangers and heat transfer characteristics of condenser tubes. Fabrication, composition and corrosion properties of ferrous and nonferrous materials of construction. (T26q)

90-T. Definitely "In"--Magnesium Tooling Plate. Tooling & Production, v. 27, Apr. 1961, p. 51-53.

Mg tooling plate is fabricated into aircraft and missile parts, assembly jigs and fixtures, molds, layout tables and hydropress form blocks. Excellent dimensional stability, welding efficiency of 95%, light weight and the ability to dampen vibration are attributed to the material. (T-general, Q-general, 17-57; Mg-b, 4-53)

91-T. Design of Powder-Metal Bearings. E. T. Johnson. Machine Design Reference Manual (The Bearings Book), 1961, p. 119-124.

Dimensions, clearance, tolerance, chamfer, parallelism and density for sleeve, flange and thrust powder-metal bearings made from bronze, Al and Fe. Consideration of thermal expansion coefficient and elastic modulus. Principles of lubrication by oil impregnation. (T7d, P11k, Q21, 17-51, 18-73; Al-b, Fe-b, Cu-s, 6-72)

92-T. Design of Strip-Type Bearings. E. Crankshaw. Machine Design Reference Manual (The Bearings Book), 1961, p. 112-118.

Lining thickness, tolerance, chamfer, size, lubrication groove shape for strip-type, thrust, bushing and split bearings made from Al, bronze and steel. (T7d, 17-51; SGA-b, Al, Cu-s, ST, 17-57)

93-T. Design of Cast Bearings. W. F. Carenbauer. Machine Design Reference Manual (The Bearings Book), 1961, p. 105-111.

Consideration of size, shape, tolerance, concentricity, squareness, parallelism and pressure distribution in bearings cast from bronze, Al, babbitt, cast iron and steel. (T7d, 17-51; SGA-b, Al-b, Cu-s, CI, ST, 17-57)

94-T. Selection of Bearing Type. H. Belanger. Machine Design Reference Manual (The Bearings Book), 1961, p. 31-39.

Consideration of radial load, thrust load, rotational speed, environmental conditions, mechanical requirements and cost. Data are given for operating temperature limits in bearings of 52100 steel, M1 and M10 toolsteel, 4260 steel and 440 C stainless steel, with boundary dimensions and tolerances. (T7d, 17-51; SGA-c, ST, SS, TS, 17-57)

95-T. (Pamphlet.) Nuclear Fuel Element Development. R. Carson Dalzell. H. W. Gillett Memorial Lecture, American Society for Testing Materials, 1916 Race St., Philadelphia 3, Pa. 1960, 14 p.

Review of materials problem in fuel element and nuclear design, including effect of irradiation on Be, Zr, Al, Cb, Yt, Cr and austenitic stainless steel when used as materials for fuel elements and cooling system; on H_2O, D_2O, Na,

NaK, Pb, Bi, Li-7, metal fluorides, metal hydroxides, terphenyl, fuel oil and other organic liquids used as coolants. (T11, 2-67, 17-51; ST, EG-a38, NM, 17-57)

96-T. High Temperature Materials for Rocket Reactors. Donald P. MacMillian. Nucleonics, v. 19, Apr. 1961, p. 85-88.

Neutron absorption, mechanical properties and compatibility of refractory metals, ceramics and graphite as affected by high stress, temperature and radiation conditions. 4 ref. (T2p; EG-d37, 17-57)

97-T. Stress-Relieved Aluminum Alloy Plate for Aircraft. A. J. Clark, A. R. Martin and L. E. Steele. Metallurgia, v. 63, Feb. 1961, p. 55-64.

Production of large thick plates in strong Al alloys for use in construction of integrally stiffened aircraft parts. Components are machined from solid plate rather than die forgings. (T24; Al-b, 4-53, 17-57)

98-T. One-Gage-Up Rule for Magnesium Saves Structural Weight. E. H. Schuette and R. B. Clapper, Space Aeronautics, v. 34, Dec. 1960, p. 61, 64, 66.

Optimum selection of sheet gage thickness for substitution of Mg for Al in aerospace vehicles to gain weight reduction without sacrifice of structural strength. Fatigue test comparison of 2024-T3 Al and AZ31B-H24Mg alloys. (T24e, Q7; Mg-b, Al-b, 17-51, 17-57)

99-T. How to Choose Lead Linings for Process Vessels. Robert L. Ziegfeld. Chemical Engineering, v. 68, Jan. 23, 1961, p. 164-169.

Selection of fabrication technique and materials for lining reaction and storage vessels containing corrosive materials with Pb. Data are given for reactivity of Pb with nitric, sulphuric and hydrochloric acid; resistance to thermal and physical shock, corrosion and erosion, pressure and temperature and fabrication by loose sheet, bonding to metal and brick and caging methods. (T29, F-general, P-general, Q-general; Pb, 17-57)

100-T. Stainless Foils Corrosion. Steel, v. 148, Apr. 24, 1961, p. 130-131.

Stainless foil is used to form molds for encapsulation of electric motors with epoxy resin. The foil remains in the resin to provide additional corrosion resistance. (T1; SS, 17-57)

101-T. Cast Stainless SO_2 Headers Hike Service Life Over Cast Iron Parts. Western Metalworking, v. 19, Apr. 1961, p. 29-30.

Utilization of HH stainless alloy, containing 25% Cr and 12% Ni, cast pipelines in header assemblies for transporting corrosive SO_2 at 1800-2280° F. in a sulphite pulping process. (T29r, R7k; SS, 5, 17-57)

102-T. Magnesium Alloy Cylinder Blocks. G. FitzGerald-Lee. Mechanical World and Engineering Record, Apr. 1961, p. 122-123.

Various Mg alloys are considered for use as castings in cylinder blocks. Alloys ZRE1 and MCZ (containing Zr and rare earth metals) show good retention of strength up to 200-250° C., alloy ZT1 (containing Zr and Th) up to 250-350° C. Other properties examined are thermal expansion, wear resistance, machinability, fluidity, fatigue and pressure die castability. (T21b; Mg-b, 17-57)

103-T. (Italian.) Industrial Furnaces. Pt. 5. Materials. Italo Montevecchi. Rivista di Meccanica, v. 11, Nov. 7, 1960, p. 41-49.

Electrical resistivity of Ni-Cr-Fe and Cr-Al-Fe alloys used as heating elements measured at 100-1300° C. Values are given for heat irradiated by surface unit for the same temperature range. (T1p, P15g, 2-61; SGA-q, Fe-b)

104-T. (Italian.) Spheroid Graphite Cast Iron in Equipment for Transporting Fluids. K. H. Kirgin. Nickel, Oct. 1960, p. 14-19.

Application of spheroid graphite cast iron in oil refineries, in gas and water handling, marine equipment and in the chemical industry. Specifications for pressure vessels and castings for low-temperature conditions. 12 ref. (T26s, T26q; CI-r, 17-57)

105-T. Thin Film Anodic Aluminum Oxide Insulation on Round and Flat Wire. Henry Walker. Wire and Wire Products, v. 36, Apr. 1961, p. 462, 514-515.

Characteristics of anodic Al oxide insulation. Advantages of anodic coated

Al wire for use in various electrical devices. (T1; Al, 4-61, 8-73, 17-57)

106-T. Stainless Steel for Motor Car Trim. Product Finishing, v. 14, Apr. 1961, p. 72-75.

Use of austenitic and ferritic stainless steel as decorative trim for automobiles. Fabrication, polishing and maintenance of trim. (T21a; SS, 17-57)

107-T. Integrally Cast Stainless Alloy Fittings for Furnace Tubes Resist Corrosion in Petroleum Processing. Industrial Heating, v. 28, Mar. 1961, p. 529, 532.

Header bodies of complex design serve as return bends of petroleum cracking furnaces to control oil flow at high temperatures and pressures. Both composition of the alloy and design of the header body contribute to total corrosion resistance. (T29n, R7a; SS, 5, 17-57)

108-T. Die-Casting the Aluminum Slant Six Engine. E. G. Moeller, W. L. Weertman and H. E. Eriksen. SAE Journal, v. 69, May 1961, p. 58-59.

SAE no. 303 die casting Al alloy containing Cu (3-4.5%) and Si (10.5-12%) is used in the production of automobile engine blocks. The casting provides low weight, high fatigue strength (10,000 psi.), good production quality and castability. (T21b; Al-b, 5-61)

109-T. Development in Aluminum Sheet Space Structures. Z. S. Makowski. Light Metals, v. 24, Apr. 1961, p. 110-113.

Stressed skin sheet space-grid technique is used to fabricate pyramids with square, pentagonal or hexagonal bases out of identical three dimensional units constructed in thin Al sheets. Testing shows high rigidity, strength, thermal and acoustic properties. (T26; Al, 4-53, 4-57, 17-57)

110-T. Titanium Fabrication for the North American Vigilante. Crucible Titanium Review, v. 9, Mar. 1961, 8 p.

Applications of Ti and its alloys in the Mercury rocket capsule. Heat treatment and machining techniques. (T2p; Ti-b, 17-57)

111-T. Materials of Construction for Chemical Plant. J. C. Bailey. Chemical & Process Engineering, v. 42, Mar. 1961, p. 137-143.

Review of composition, properties, production, economics and applications of Al-base materials for chemical engineering plants and equipment. 7 ref. (T29; Al-b, 17-57)

112-T. Pearlitic Moves On and Up. Tooling & Production, v. 27, May 1961, p. 99.

Casting of crankshafts, torsion bars, gears, hardware and shotgun frames from pearlitic malleable Fe. (T7; CI-s, 17-57)

113-T. Steels and Aircraft Engineering. A. J. Kennedy and A. R. Sollars. Aircraft Engineering, v. 33, Apr. 1961, p. 94-99.

Applications of various types of steel in conventional and supersonic aircraft and in rocket motor cases. Composition, corrosion resistance, machinability, mechanical and thermal properties of 420, 422, AM350, AM355, 17-7PH, Tricent and Thermold steels. 11 ref. (T24; ST, 17-57)

114-T. Job Shop Makes Millions. R. O. Bailey. Production, v. 47, May 1961, p. 50-53.

Production of springs by forming, heat treating and grinding of low-carbon steel, stainless steel, Inconel X and brass. Measurements of free length, compression force and electrical resistance. (T7c; CN, Cu-n, Ni-b, SS, 17-57)

115-T. New Applications Spur Malleable Iron Industry. Jack Schaum. Modern Castings, v. 39, Mar. 1961, p. 46-49.

Growing use of pearlitic malleable Fe in automobile and ordnance components because of the materials' high strength per unit cost as a result of technology development in cast iron production and improvement of mechanical properties by alloying and structural control, and design and stress analysis of castings. (T2, T21, Q-general; CI-s, 17-57)

116-T. Sintered Iron Piston Rings. Robert Talmage. Metal Progress, v. 79, May 1961, p. 89-90.

Sintered Fe rings are stronger and more wear resistant than cast iron rings and in addition are self lubricating. They have a cleaner, more uniform microstructure and can be produced at lower cost. (T7, 17-57; Fe, 6-72)

117-T. Reactor Steels. Nuclear Energy, Feb. 1961, p. 76.

Review of papers presented at the British Nuclear Energy Conference covering factors influencing the steel selection, fabrication aspects and corrosion, high temperature, creep and irradiation properties in nuclear reactors and pressure vessels. Steels considered include Affreeze III, Esshete CML, a low-carbon high Mn alloy, a multiple alloy, low-carbon steel and a multiple alloy high-tensile steel. (T11, Q-general, 2-62, 2-67, 10-54; AY, 17-57)

118-T. Some Notes on the Design of Chemical Equipment in Aluminium. E. F. Boon and F. C. A. A. van Berkel. British Welding Journal, v. 8, May 1961, p. 237-244.

Properties of Al as a material of construction for chemical equipment are compared with those of steel, using various parameters; price parameter for strength, price parameter for stability, thermal stress parameters and the strength/density parameter. Design rules for flat Al gaskets and a design study of an Al tank. 15 ref. (T29; Al, 17-57)

119-T. Pressure Vessel Design Requirements in the Future. W. B. Carlson. Engineer, v. 211, Apr. 21, 1961, p. 624-628.

Specifications given for ultimate tensile strength, proof, rupture and creep stresses, safety factor and design stress of pressure vessels. (T26q, 17-51)

120-T. Heat Sinks: Materials. Maureen Pearcy. Lockheed Aircraft Corp. U. S. Office of Technical Services, PB 171372, Aug. 1960, 29 p. $1.

Thermal conductivities of materials to be incorporated in space and re-entry vehicles. (T24e)

121-T. Steel-Like Valves at Near-Iron Prices. Dale Aunspach. ISA Journal, v. 8, May 1961, p. 52-55.

Evaluation of ferritic nodular iron as a substitute for steel in the fabrication of control valve bodies. Analysis of comparative compositions and physical and mechanical properties, including tensile, fatigue, impact, corrosion resistance, machinability and thermal characteristics. (T7b, P-general, Q-general; CI-r, ST, 17-57)

122-T. Pressure-Tight Aluminum Housings. Fred Dunlap. Materials in Design Engineering, v. 53, May 1961, p. 126-127.

Al housings for electronic equipment can now be made, without impregnation, by casting in permeable plaster molds. (T1; Al, 17-57)

123-T. Materials Met Test all the Way--as Expected. Missiles and Rockets, v. 8, May 15, 1961, p. 21.

Applications of structural and protective metals including Be, Ti, steel and Ni-Co alloys in space capsule. Fusion welded Ti components provide weld strengths exceeding base metal strengths. (T24e; Be, Ni-b, Co, ST, Ti, 17-57)

124-T. The New Developments in Bearing and Gear Lubrication. Nicholas P. Chironis. Product Engineering, v. 32, May 15, 1961, p. 98-100.

Survey covering air, sleeve and rolling-contact bearings, improved lubricants and lubrication techniques, wear equations, design charts, performance data and testing methods. Topics include stepped air bearing design, applications of PTFE fabric-lined bearings, properties of silicone lubricants and fire resistant fluids; wear evaluation for ball bearing steels and equations for computing film thickness in gears and bearings. (T7a, T7d, Q9, 18-73; SGA-c, NM-h, 17-51)

125-T. (Italian.) Nickel Alloys in Instrumentation and Electronics. Nickel, Oct. 1960, p. 1-11.

Applications of high permeability, square hysteresis loop, temperature compensation and constant elastic modulus alloys. 4 ref. (T1; Ni-b, SGA-n, 17-57)

126-T. Ball and Roller Bearings. Pt. 3. Power Transmission, v. 30, May 1961, p. 280-285.

Forming, grinding and polishing ball and roller bearings made of heat treated chromium steel. Data given for bore and width deviation, I.S.A. running tolerances and over-all diameter deviation. (T7d; ST, Cr, 17-57)

127-T. Cut Tool Life and Boost Savings? Richard D. Zimmerman. American Machinist/Metalworking Manufacturing, v. 105, May 15, 1961, p. 127-129.

Comparison of tool life, machining speed and cutting efficiency of single-point brazed tooling and disposable cemented-carbide inserts in cutting tests

on stainless and toolsteels and superalloys. (T6n, G17; ST, SGA-h, 6-69, 14-68, 17-57)

128-T. Tableting With Tungsten Steel Tools. American Machinist/Metalworking Manufacturing, v. 105, May 15, 1961, p. 146-147.

Application of Hi Wear 64, a 4% tungsten tool and die steel with nondeforming tendencies, low-hardening temperature and deep hardenability in tableting punch holders for fabrication of tiny magnetic cores. Increase in wear life is compared above Carpenter K-W toolsteels. (T6r, Q9, 2-60; TS, 17-57)

129-T. Metallurgy in Nuclear Power Technology. Pt. 8. Coolant and Containment Problems in Reactors. J. C. Wright Metal Treatment and Drop Forging, v. 28, May 1961, p. 204-210.

Survey of properties and applications of liquid metals and gases in nuclear reactors with attention to metallurgical problems arising from their use. Topics include compatability, mass transfer effects, inhibition of liquid metal attack, coolant gas problems, corrosion of steel in gas-cooled reactors and in high-temperature water systems and brittle fracture of pressure vessels. Liquid metals discussed include Na, Na-K, Bi, Pb, Li and eutectic Pb-Bi. (T11, Q26s, R6m; ST, Bi-b, Li, Na-b, Pb-b, Hg, 14-60, 17-57)

130-T. Aluminum Exchanger and Condenser Tubes in Petroleum Service. R. L. Hilderbrand. Paper from "Proceedings--American Petroleum Institute". Section 3. v. 40. American Petroleum Institute, New York 20, 1960, p. 118-130.

Report on tube failures occurring from both the water and hydrocarbon sides during service in refinery equipment. Maximum temperature limitations and chloride concentrations are suggested. 7 ref. (T29n, R7g; Al, 17-57)

131-T. Stainless Steel in Petroleum Refining and Petrochemical Processes. A. V. Alessandria and Norton Jaggard. Paper from "Proceedings--American Petroleum Institute". Section 3. v. 40. American Petroleum Institute, New York 20, 1960, p. 140-154.

Susceptibility to general and pitting attack, stress corrosion cracking, intergranular attack and embrittlement of stainless steels, especially AISI Type 300 grades. Case histories of failure are described for various kinds of petroleum and chemical process equipment. 15 ref. (T29n; SS, 17-57)

132-T. Low-Temperature Piping Materials for Petroleum Refineries. H. M. Howarth. Paper from "Proceedings--American Petroleum Institute". Section 3. v. 40. American Petroleum Institute, New York 20, 1960, p. 233-244.

Recommendations for piping materials to be used at -50 to -20° F., -150 to -50° F. and below -150° F. Fabricability, cost and availability of stainless and carbon steels, brass, Al and other materials. 14 ref. (T26; Al, CN, Cu-b, SS)

133-T. Which Milling Cutter? Carbide Versus High Speed Steel. James H. Meehan. Machine and Tool Blue Book, v. 56, June 1961, p. 141-142.

Review of factors affecting the choice between high-speed steel and carbide cutters including types of milling machines available, variety of materials used and quantities of similar parts involved. Cutting rates and conditions. (T6n; TS-m, 6-69, 17-57)

134-T. Take a Good Look at Ceramics. W. M. Wheildon. Machinery, v. 67, May 1961, p. 114-123.

Review of development, chemical and physical properties of ceramic cutting tools. Survey of tool geometry, cutting variables and techniques for machining carbon, high-strength alloy and high-hardness steels, cast iron, brass, Al alloys and nonmetallics. (T6n, G17; ST, CI, Cu-b, Al-b, NM-f, 17-57)

135-T. Spring Failures and Their Prevention. L. W. Flewin. Australian Institute of Metals, Journal, v. 6, Feb. 1961, p. 33-40.

Selection of spring materials according to application. Design factors for helical springs cold coiled from pretreated wire and coiled hot from annealed bars and for laminated and volute springs. Shot-peening and corrosion protection and their influence on the finished product. 16 ref. (T7c)

136-T. The Machining of Steel. F. C. Lea and Eric N. Simons. Edgar Allen News, v. 40, May 1961, p. 105-106.

A review of various types of cutting tools with attention to tool geometry, service life and applications of cemented carbide, high-speed steel and hard surfaced toolsteels in machining operations. Design and operation of milling cutters. (T6n, G17, 1-52, 17-57; ST)

137-T. Nuclear Experts Meet on West Coast. Report on the Winter Meeting of the American Nuclear Society, San Francisco, Dec. 1960. Metal Progress, v. 79, June 1960, p. 140, 144, 150, 152.

Brief summaries of paper presented covering metallurgy and fuel manufacture, corrosion of metals in molten U-Bi, reactor and fuel element engineering and radiation effects. (T11, 3-67)

138-T. Spring Strip Preparation and Spring Manufacture. S. C. Poulsen. Machinery (London), v. 98, Apr. 26, 1961, p. 947-951.

Production of coil springs from carbon steel, stainless steel or beryllium copper strip. Heat treatment and torque testing of finished springs. Corrosion resistance, surface finish and mechanical properties. (T7c, J-general, Q-general; CN, SS, Cu-b, 4-53, 17-57)

139-T. Lobed Pressure Vessels. Australasian Manufacturer, v. 46, May 6, 1961, p. 72-77, 79-80, 82-83, 85, 87.

Fabrication of pressure vessel lobes from stainless steel plate or 180° pipe bends in toroidal shapes. Assembly and welding techniques. Thermal and pressure testing of the models to determine bursting pressure, bending and membrane stresses. 6 ref. (T26q, 17-51; SS, 17-57)

140-T. Pitting of Gear Teeth. J.D. Graham. Chapter 7 from "Handbook of Mechanical Wear". University of Michigan, Ann Arbor, Mich., 1961, p. 131-154.

Nature of pitting failure in gears. Stress distribution in the region of contact of mating gear teeth. Influence of subsurface fatigue, surface cracks, surface flow tooth accuracy, surface finish, pressure angle, tooth profile, coatings, lubrication and metallurgical properties on pitting. 11 ref. (T7a, 9-71)

141-T. A Profile of Aluminum Alloy Cylinder Bores. N.W. Smith. SAE Paper no. 369D, 1961, p. 6 p.

Evaluation of die cast Al-Si alloys for durability in automotive and diesel engines. Comparison with cast iron Cr plated Mo sprayed materials in wear tests in four stroke cycle engines. Effect of Si content on wear and abrasion resistance and heat transfer. (T21b, Q9n, 2-60; Al-b, Si, 17-57)

142-T. Forgings in Missiles and Space Vehicles. Jose R. Canal and William C. Kunkler, Jr. Aircraft Production, v. 23, May 1961, p. 188-193.

Review of Be, Ni-base alloy, Ti-base alloy, refractory metal, superalloy, low alloy and stainless steel forgings for use in missile frames, rocket motors and nozzles. Data given for tensile and stress rupture properties at high temperatures and pressures. (T2p, T24e, Q-general, 2-62; ST, Be, Ni-b, Ti-b, SGA-h, 4-51, 17-57)

143-T. Influence of Cutting Edge Sharpness on Tool Behavior. J. Simonet and E. Bodart. Microtechnic, v. 15, Apr. 1961, p. 44-46.

Tool behavior and life as affected by cutting edge sharpness. Definition, measurement and production of cutting edges and tool life tests by normalizing C55 steel (SAE 1055) and subjecting it to machining with various tool angles and at different cutting speeds. (T6n, G17, 1-54, 17-51; ST)

144-T. Survey of Materials for High-Temperature Bearing and Sliding Applications. M. F. Amateau, D. W. Nicholson and W. A. Glaeser. Defense Metals Information Center, Battelle Memorial Institute, DMIC Memo. 106, May 12, 1961, 67 p. (Available as PB 171625 from U. S. Office of Technical Services, Washington 25, D. C.)

Wear and friction data for refractory metals, superalloys, cermets, ceramics and graphite. For rolling contact conditions, cemented carbides and Co-base superalloys appear promising to at least 1300° F. For sliding conditions, the selection of materials is wider including Ni-base and Co-base superalloys, cemented carbides, some cermets and a few pure ceramics. Most of these materials have some merit for use to 1500° F. 118 ref. (T7d; EG-d37, SGA-h, 17-57)

145-T. Anodised Aluminium Foil and Strip in Electrical Windings. P. J. Brandon.

Current Engineering Practice, v. 3, Mar. 1961, p. 33-34.

An oxide layer 10-15 microns thick, serving as an electrical insulator, is produced by anodizing Al strip or foil which is subsequently used for lightweight coil having a volume equal to or less than that of an equivalent coil wound with Cu and the necessary insulation. The reduced insulation thickness of Al coils provides excellent heat transfer characteristics, thus avoiding "hot spots". The coil can be used at temperatures up to the melting point of Al. Anodized strips can be joined by cold pressure welding or by soldering. (T1; Al, 4-53, 4-56, 8-73, 17-53)

146-T. Materials Problems in Stationary and Mobile Power Reactors. U. M. Staebler. Metals Engineering Quarterly, v. 1, May 1961, p. 112-123.

Evaluation of various metals for use as structural, moderator, control, fuel, cladding and coolant materials in nuclear reactors. Includes stainless steels, Cb, Mo, graphite, cermets, Zr alloys and other materials. (T11; Cb, Mo, SS, Zr-b)

147-T. Filament-Wound Pressure Vessels. Richard Gorcey. Machine Design, v. 33, June 22, 1961, p. 178, 180, 183, 184.

Techniques for circumferential, helical and sequential filament winding using high-strength steel wire or glass filaments as reinforcing material and an epoxy resin binder. Density, tensile and yield strengths, modulus of elasticity and elongation properties in comparing the filaments with Ti and steel as pressure vessel materials. (T26q; ST, SGB-a, 4-61, NM-f32)

148-T. Zinc Die Castings Foil Yeggs. Precision Metal Molding, v. 19, June 1961, p. 34-36.

Design and production of die cast Zn components for a universal vault lock using unit dies. Survey of finishing and plating operations. (T6s, 17-51; Zn, 5-61, 17-57)

149-T. Better Motor Cases for Missiles. Pt. 1. Improved Designs. John Cunningham. Metal Progress, v. 80, July 1961, p. 97-100.

Solid-propellant motor cases can be made more reliable by such improvements as matching deflections of cylinder and end closures, using unsymmetrical bosses for reinforcing holes in domes and employing spline joints for attaching nozzles. A method for applying uniaxial tensile data to bi-axial design problems has also been helpful. (T24e, 17-51, Q27, Q25)

150-T. Better Motor Cases for Missiles. Pt. 2. More Accurate Tests. Guy V. Bennett. Metal Progress, v. 80, July 1961, p. 101-105.

Test results from a new partial-crack tensile specimen correlate with behavior of pressure vessels containing similar cracks. Further refinements are expected to produce quantitative data which can be used in designing reliable lightweight motor cases. (T24e, 17-57, Q27, 1-54, Q26)

151-T. Better Motor Cases for Missiles. Pt. 3. Advanced Fabrication Methods. R. E. Heise. Metal Progress, v. 80, July 1961, p. 105-107.

Rigid specifications on incoming material and meticulous quality control throughout production enable Douglas Aircraft to turn out solid-propellant motor cases which consistently meet proof stresses of 235,000 psi. They are made of AISI 4340 sheet by the conventional roll-and-weld process. (T24e, Q26, K-general, J-general; AY)

152-T. The Success Story of Volkswagen. William G. Gude. Foundry, v. 89, July 1961, p. 56-61.

Production methods and equipment used in casting of Al, Mg, gray iron and Zn automobile components. (T21, E-general; Al, CI-n, Mg, Zn, 17-57)

153-T. HH Alloy Castings Out-Perform High-Chromium Iron 7 to 1. Inco Nickel Topics, v. 14, Apr. 1961, p. 4.

Gas line service sulphur dioxide headers of nickel stainless steel and iron-chromium steel alloys are used for transporting high temperature (2280° F.) SO_2 and compared for service life. (R6p, 2-62, T26r; SS, Ni, AY, Cr, 17-57)

154-T. Stainless Filter Tames Corrosion. Welding Design & Fabrication, v. 34, Apr. 1961, p. 59.

Fabrication of heat, corrosion and pressure resistant stainless steel filters used for chemical processing of acids, salts and other contaminants. (T29, P11h, R6; SS, 17-57)

155-T. Pressure Vessel Design Requirements in the Future. W. B. Carlson. Welding Journal, v. 40, June 1961, p. 265s-271s.

Summary of papers sponsored by Pressure Vessels Commission of the IIW emphasizing rational design procedures for welded pressure vessels and proposing that the design stress be raised to values usable in idealized vessels under ideal conditions and be modified down as necessary. It is also proposed that the design stress concept be removed from codes and that vessels be designed against each contingency of failure in terms of mechanical and physical properties of materials. Application of design criteria to vessels of SA-201-A steel. (T26q, Q-general, 3-66; ST, 7-51, 17-51)

156-T. Pressure Vessel Analysis of Submarine Hulls. Edward Wenk, Jr. Welding Journal, v. 40, June 1961, p. 272s-288s.

Review of analysis of welded submarine pressure hulls in terms of pressure vessel design, in particular basic mechanics of yielding and failure under external hydrostatic pressure. Stress-strain relations, buckling phenomena, structural stability of vessels and mechanical properties of steels are considered in design of structure with minimum weight-high strength-high toughness characteristics. 54 ref. (T22, T26q, 3-66, 3-74; ST, 7-51, 17-51, 17-57)

157-T. Putting Magnesium Tooling to Work. Jack M. Hockett. Tool and Manufacturing Engineer, v. 47, July 1961, p. 53-56.

Use of Mg as a tooling material in the fabrication of aircraft components. Advantages include light weight, weldability, wear resistance and part interchangeability. (T6n, G17, T24; Mg, 17-57)

158-T. Refractories Look Best for Structures of Re-Entry Gliders. Edwin G. Czarnecki. Space/Aeronautics, v. 35, June 1961, p. 54-58.

Data on environmental factors of reentry for a winged orbital glider. Analysis of re-entry trajectories, heating rates, aerodynamic loading and structural geometry shows advantages of W, Ta, Cb or Mo for the primary structure of such a glider. Definition of limiting design parameters. 8 ref. (T24e, P11h, 3-73; W, Ta, Cb, Mo, 17-57)

159-T. Powder Metal Tubing Aids Nuclear Reactor Design. Western Metalworking, v. 19, June 1961, p. 54.

Finned Al tube impacts fabricated from Al powder metallurgy alloys containing uranium oxide fuel pellets are arranged in bundles of 25 within a jacket. Organic fluid flowing over the exterior of the tubes controls the atomic fission process in the uranium fuel contained in the impacts. (T11q; Al, 4-60, 6-72, 17-57)

160-T. The Use of Plutonium in Reactors. M. B. Waldron. Nuclear Power, v. 6, July 1961, p. 58-62.

Factors influencing the development of Pu fuels for power reactors. Survey of current reactor programs in the United Kingdom, U. S., Canada, France and Russia. Developments in alloy, ceramic and dispersion fuels. 12 ref. (T11g; Pu, 17-57)

161-T. Fuel and Fertile Materials. Reactor Core Materials, v. 4, May 1961, p. 1-16.

Review of recent work on fabrication, cladding and testing of U, Pu and metals, alloys and compounds. Density, hardness, expansion coefficient, strength, growth, corrosion and X-ray diffraction data. Irradiation effects, elastic moduli, heat capacities and Poisson's ratios. 77 ref. (T11g, L22, P-general, Q-general, 1-54; U, Pu, Th, 17-57)

162-T. (Book.) Nuclear Reactor Containment Buildings and Pressure Vessels. 1960. 572 p. Butterworths & Co. (Publishers) Ltd., 88 Kingsway, W. C. 2, London, England. $18.50.

Twenty-two papers and discussions devoted to the analysis and design of structures used in nuclear power plants representing the Proceedings of an International Symposium organized by the Dept. of Mechanical, Civil and Chemical Engineering of the Royal College of Science and Technology, Glasgow, Scotland, May 17-20, 1960. Papers abstracted separately. (T11, T26q, 10-54)

163-T. Aluminum Die Castings Make New Engines Lighter, Cool Running. F. L.

Church. Modern Metals, v. 17, June 1961, p. 36, 38, 40.

Use of Al die castings in the production of a 2-cylinder, 18-horsepower unit and a single-cylinder, 9-horsepower outboard marine engine. Crankcases of 380 Al-Cu-Si alloy provide good as-cast strength, fatigue strength and corrosion resistance. Construction and assembly details. (T22h, Q7, R-general; Al, 5-61, 17-57)

164-T. Mower Rides on Big, Multi-Purpose Permanent Mold Casting. Modern Metals, v. 17, June 1961, p. 50, 52.

Al-Cu-Si alloy casting serves as main vehicle frame, as well as foot-rest and fenders, cutter-blade housing and axle and steering column support. Casting eliminates corrosion and vibration damage. (T10k, R-general; Al-b, Cu, Si, 5-63, 17-67)

165-T. Refractory Metal Honeycombs for Space Vehicles. Fansteel Metallurgy, June 1961, p. 4.

Fabrication of Mo, Cb and Ta honeycomb for aircraft or missile component parts. Use of ceramic and plastic and metal honeycomb combinations. (T24e; Mo, Cb, Ta, 7-59, 17-57)

166-T. In Specifying Tools, Look After You Leap, Too! W. C. Nemity. Metalworking, v. 17, July 1961, p. 12-14.

Comparison of titanium carbide, tungsten carbide and ceramic insert tools with brazed tools in terms of edge life and temperature and shock resistance in machining mild steel, low-alloy steel, cast steel, cast iron and cast Al. (T6n, G17; CN, AY, CI, Al)

167-T. (Russian.) Cu-Mn-Sn Alloys Used in the Manufacture of Precision Rheostats. V. S. Mes'kin and L. A. Popova. Metallovedenie i Termicheskaya Obrabotka Metallov, Apr. 1961, p. 20-24.

Samples of ternary alloys containing 84.36-93.71% Cu, 4.41-12.87% Mn and 0-7.58% Sn and quaternary alloys composed of 88.46-89.31% Cu, 10.30-11.02% Mn, 0.30-0.34% Sn and 0.06-0.30% Si are tested for electrical resistivity and mechanical properties. Effect of Sn on the electrical resistance temperature coefficient. 7 ref. (T1p, P15g, 2-60, Q-general; Cu-b, Mn, Sn, Si, 17-57)

168-T. Sandwich Construction for Primary Structure of Ballistic Missiles and Space Vehicles. Ralph F. Foral. Aerospace Engineering, v. 20, July 1961, p. 24-25, 93-99.

Design consideration for use of sandwich construction in vehicles using liquid propellants including material and core configuration selection, joining methods, inspection, handling and repair. Examination of the behavior of a sandwich cylinder under axial compression, bending moment, shear, internal and external pressure and thermal gradients. 10 ref. (T2p, T24e, 2-62, 3-66, 3-74; 7-59, 17-57)

169-T. Benefits of High Modulus-High Density Boring-Bar Structures. W. L. Kennicott and J. J. Galimberti. American Society of Mechanical Engineers, Paper no. 61-PROD-13, 1961, 12 p.

Reduction in chatter, vibration and deflection, increase in damping rate and improvement of surface finish quality are achieved with cemented tungsten carbide boring bars. Applications in boring, grinding and grooving. 16 ref. (T6n, G17, G17d, G18)

170-T. New Carbide Put on Market. Steel, v. 149, July 31, 1961, p. 71.

Steel, stainless steel and cast iron parts are machined with titanium carbide tool to close tolerances with minimum tool adjustment and wear. Metal removal rate on 300 and 400 stainless steels is 30 cu. in. per min. (T6n, G17; ST, SS, CI)

171-T. Special Bearings Combat Heat. G. A. Widmeyer. Iron Age, v. 188, Aug. 3, 1961, p. 74-76.

Design and testing of stainless, tool and die steels and Co-base materials to determine operating temperatures and lubricating conditions when used as ball bearing screws in control rod drives for nuclear reactors. (T11g, 2-62; SGA-c, SS, TS, Co-b, 17-57)

172-T. (Book.) Reactor Handbook. 2nd Edition. v. 2. Fuel Reprocessing. S. M. Stoller and R. B. Richards, Editors. 1961. 665 p. Interscience Publishers, Inc., 250 Fifth Ave., New York 1, N. Y.

Survey of nuclear fuel processing, covering aqueous and nonaqueous procedures and including pyrometallurgy;

reconversions of nuclear products (U, Th and Pu); and gaseous, liquid and solid radioactive waste disposal; reprocessing and reconversion economics; and nuclear plant design, management and equipment. 992 ref. (T11g, A-general, C-general, 11-68; U, Th, Pu, 17-57)

173-T. (German-French.) Use of Copper for Organ Pipes. Rudolf Bruhin. Pro-Metal, v. 14, June 1961, p. 491-494.

Application of 0.4-2.2 mm. thick pickled and annealed Cu sheet in organ pipe construction. Data are given for microstructure, chemical composition and mechanical properties. (T9r, F26, Q-general; Cu, 4-53, 17-57)

174-T. (German-French.) Use of Brass and Bronze in Construction of Microswitches. Pro-Metal, v. 14, June 1961, p. 517.

Examples for microswitches of brass or beryllium bronze (380 v. and 10 amp.) having a lifetime of 10-50 million switching operations. (T1d; Cu-b, 17-57)

175-T. Aluminum Sheet Structure. L. S. Makowski. Light Metals, v. 24, July 1961, p. 194-196.

Description of prefabricated pyramids constructed from NS3 Al sheet for application in a space-frame roof of a membrane space structure. (T26; Al-b, 17-57)

176-T. Extrusions Strengthen Aluminum Highway Bridge. Modern Metals, v. 17, July 1961, p. 44.

Use of 6061-T6 Al alloy extrusions and stressed sheet as modules and supports in the construction of a highway bridge 28 ft. wide and 97 ft. long. (T26p; Al-b, 4-53, 4-58)

177-T. Aluminum Tops in Transmission Powers. H. K. Darby. Modern Metals, v. 17, July 1961, p. 68, 72-74.

Use of 6061-T6 Al alloy extrusions in the construction of electric power transmission towers. Assembly and erection details and design considerations. (T26, 17-51; Al-b, 4-58, 17-57)

178-T. (Italian.) Cast Iron or Aluminum? Fonderia, v. 10, June 1961, p. 263, 265, 267, 269.

Advantages and disadvantages of replacing cast iron with Al in casting engine blocks, gearboxes and crankcases. Economic considerations. (T21b, T21c; Al, CI, 17-57)

179-T. High Energy--Weight Ratio, Nickel Cadmium Cells. J. C. Duddy and A. J. Salkind. Electrochemical Society, Journal, v. 108, Aug. 1961, p. 717-719.

The active and conductive materials are dispersed in a microporous plastic structure. Cells with an energy density of 40 watt hour per kg. are constructed. (T1f, 17-57; Ni, Cd)

180-T. Niobium Solid Electrolytic Capacitors. N. Schwartz, M. Gresh and S. Karlik. Electrochemical Society, Journal, v. 108, Aug. 1961, p. 750-758.

Crystallization of the amorphous columbium oxide film is a determining factor in the failure of the capacitors above 20 v. at 85° C. Factors controlling the initiation of crystallization--purity, sintering conditions and anodization conditions--are correlated with initial and life test properties of the capacitors. 19 ref. (T1e, P15g, 2-60; Cb, 6-71)

181-T. Nucleonics in Flight. Metal Progress, v. 80, Aug. 1961, p. 132-144.

Report of a recent symposium sponsored by the North Texas section of the American Nuclear Society, Dallas, Texas, Mar. 1961, covering the manufacture of various fuel elements designed to be a part of reactors for nuclear powered aircraft and space vehicles. (T11g, T24)

182-T. This Is Good Die Casting Design. Precision Metal Molding, v. 19, July 1961, p. 30-31.

Shape, dimensional tolerances, assembly, insert sizing and positioning, finishability and weight considerations in the design of a Zn die cast egg beater. (T10c, 17-51; Zn, 5-61, 17-57)

183-T. Self-Fastening Extrusion Used for Sun Screen Frame. Precision Metal Molding, v. 19, July 1961, p. 34.

Anodized 6063-T6 Al alloy frame members are fastened by a saw-tooth edge on the corner post which forms an interference fit with the rail because the

edges are slightly larger than the extrusion openings. (T10c, K13q; Al-b, 4-58, 8-73, 17-57)

184-T. Better Lighting With Extruded Louvers. Precision Metal Molding, v. 19, July 1961, p. 40.

Extruded 6063-TS Al alloy parabolic louvers focus light downward thereby minimizing horizontal scatter. Louvers are anodized before assembly. (T10c; Al-b, 4-58, 8-73, 17-57)

185-T. Diamond Knife Becomes Precision Cutting Tool. Steel, v. 149, Aug. 7, 1961, p. 70.

Development of a 9/32 in. diamond knife ground to a radius equivalent to 12 carbon atoms. Tests show that the surface can be used for metallographic examination without polishing. Application to cutting of Pb, Sn, Bi, In, Ag, Zn, mild steel and stainless steel. (T6n, G17; Pb, Sn, Bi, In, Ag, Zn, CN, SS)

186-T. Convair 900--Investment Castings. Kenneth H. Pierce. Precision Metal Molding, v. 19, Aug. 1961, p. 28-30.

A 410 stainless steel casting heat treated to 200,000 psi. ultimate strength has application as a critical load-bearing part in the main landing gear unit for a jet aircraft. Fabrication of physical and mechanical properties of castings. (T24; SS, 5-62, 17-57)

187-T. Die Castings Seal Jet Liner Fuel Tanks. Precision Metal Molding, v. 19, Aug. 1961, p. 30-31.

Application of A360 Al alloy die castings having high corrosion resistance and surface finish for wing fuel access doors of a jet aircraft. (T24; Al-b, SGA-g, 5-61, 17-57)

188-T. B-70 Program Develops High Performance Materials. Precision Metal Molding, v. 19, Aug. 1961, p. 32-33.

Extrusion of PH 15-7 Mo stainless steel and other materials for applications in jet aircraft. Tests indicate the effect of cooling rate and annealing temperature on tensile properties. (T24; SS, 4-58, 17-57)

189-T. Extrusions and Casting Under High Stress. B-70 Gets 700 Shapes From 350 Extrusions. Scholer Bangs. Precision Metal Molding, v. 19, Aug. 1961, p. 23-25.

Extrusions of PH15-7Mo Cres steel and Ti are used to replace forgings, weldments, machined barstock and press-former sheet metal in many critical areas of a jet aircraft. (T24; ST, Ti, 4-58, 17-57)

190-T. Titanium Topples Tower Trouble. Union Carbide Metals Review, v. 4, Summer 1961, p. 26-28.

Use of Ti-lined sections and Ti trays in a distillation column used for separating crude organic chemicals. Tray and column fabrication and comparison of corrosion rates with several stainless steels, Hastelloy alloys, Cu, Monel, Nionel, Zr and Alloy 20. (T29m, R7; Ti, 17-57)

191-T. This Fabulous Foil. Aluminum Bulletin, Summer 1961, p. 1-15.

Applications of Al in package design. (T10a)

192-T. Some Properties of Rhenium and Rhenium Alloys Pertinent to Electron-Tube Applications. J. B. Baker and G. B. Gaines. Paper from "Advances in Electron Tube Techniques". Fifth U. S. National Conference, Proceedings (Sept. 1960). Pergamon Press Inc., New York 22, 1961, p. 6-9.

Work functions and emission characteristics of Re alloys containing Mo, W or both used as a base for oxide cathodes or as a constituent in dispenser cathodes. 7 ref. (T1j, P15, 2-60; Rh-b, 17-57)

193-T. Materials Limitation in High Mach Number Air-Breathing Engines. Pol Duwez. Paper from "Combustion and Propulsion". Fourth AGARD Colloquium. Pergamon Press Inc., New York 22, 1961, p. 347-361.

A review of critical materials problems in high mach number air-breathing machines. W, Mo, Ta and Cb in sheet form is used in the construction of a ramjet. Properties of these materials for porous wall cooling and ablating. (T24a, Q24a; EG-d37, W, Mo, Ta, Cb)

194-T. (German.) High-Alloy Steels in Nuclear Power Plants. Pt. 2. J.

Jagersberger. Atomwirtschaft, v. 6, May 1961, p. 283-288.

Composition and mechanical properties (at 20° C.) of quenched alloyed steels X 2 CrNi 189, X 5 CrNi 189, X 2 CrNiMo 1810, X 2 CrNiMo 1814, X 5 CrNiMo 1814, X 5 CrNiMo 1810, X 10 CrNiNb 189, X 10 CNMN 1810 and X 5 NiCrMoCuNb 2218. Behavior under conditions as prevailing in nuclear power plants including resistance to radiation and effect of annealing after raditaion, corrosion resistance (under radiation and to Na, Ca and Na-Ca alloys) and applicability as canning material and in reconditioning of cleavage-waste. (T11, Q-general, R-general, 2-67; AY, 17-57)

195-T. Artillery Shell Stopped by Aluminum. Ted Douglas. Canadian Metalworking, v. 24, Aug. 1961, p. 55-56.

Report of tests and developments in the automobile industry including impact strength of a 1 1/4 in. thick Al plate as measured by firing a 37 mm. shell at a weld; techniques for casting gray iron engine blocks; corrosion resistance of anodized Al parts; and development of a 4 ft. high mesh Al fence which is erected down the median strip of a highway to deflect glare from the lights of oncoming cars. (T21, E-general, Q7, R-general; Al, 4-53, 8-73, CI, 17-57)

196-T. Magnesium in the Volkswagen. Light Metals, v. 24, Aug. 1961, p. 221-224.

Use of Mg castings with special attention to die castings in automobile engine blocks and numerous other parts and fittings from 1945-1960. Comparison of casting methods for crankcases. (T21b, T21c; Mg, 5-61, 17-57)

197-T. (Italian.) Metallurgical Products of Common and Special Steels. Angelo Bellini. Rivista di Meccanica, v. 12, June 24, 1961, p. 35-41.

Types, characteristics, choice criteria and classification of various steels used in making pipes, nuts, bolts and valves for internal combustion engines. Oxidation, corrosion, heat and pressure resistance. (T7f, T21b, P11h, Q27a, R-general; ST, 4-60, 17-57)

198-T. Conveyor System Smooth Flow of In-Process Inventory. Iron Age, v. 188, Aug. 31, 1961, p. 92-94.

A materials handling conveyor system permits simultaneous mass production of 280 different varieties of tubular steel chair and table products. Bending, electrostatic painting, plating, cutting and punching and final assembly are included. (T10b, 1-52, 18-74)

199-T. (Japanese.) Studies on the Inspection Methods of Small-Sized Stainless Steel Tubes for Fuel Cladding. S. Mochizuki, T. Maekawa, M. Mizuta, S. Iwai, S. Maeda and A. Murakami. Atomic Energy Society of Japan, Journal, v. 3, July 1961, p. 30-39.

Methods are given for measuring efficiency, dimensions and integrity of AISI304L stainless steel cladding tubes. Outside and inside diameters are measured by an airmicrometer; material integrity is checked by eddy current instruments for nondestructive testing; pressure resistance is measured for internal and external pressure by hydrostatic testing at high temperature. (T11, S13h, Q10b, 1-53; SS, 4-60)

200-T. (Book.) Steels for Reactor Pressure Circuits. no. 69. 1961. 587 p. Iron and Steel Institute, 4 Grosvenor Gardens, London, SW 1, England.

Report of a symposium held in London on Nov. 30-Dec. 2, 1960, by the Iron and Steel Institute for the British Nuclear Energy Conference. Papers are abstracted separately. (T26q, T11, 11-64; ST)

201-T. Steel and Nuclear Power. Leonard Owen. Paper from "Steels for Reactor Circuits". no. 69. Iron and Steel Institute, London SW 1, England, 1961, p. 1-13.

The demand for steel by the United Kingdom Atomic Energy Authority in terms of requirements of reactor pressure vessels; the brittle fracture problem; and alternatives to mild steel plate. (T26q, T11, Q-general; ST, 4-53, 17-57)

202-T. Titanium Exchangers Defy Chlorine. Chemical Engineering, v. 68, July 24, 1961, p. 170-174.

Corrosion resistance and heat transfer properties of Ti lead to applications in chlorine cooling equipment, replacing glass and conserving both space and maintenance. (T29m; Ti)

203-T. (German.) Metal-Ceramic Ply-Coatings in Missile Engineering. E. Meckelburg. Metall, v. 15, Aug. 1961, p. 776-780.

Review of materials including Be, B, Cr, Co, Ir, Mo, Ni, Ta, Rh, Pt, W, Sn, V, Zr, BeO, Al_2O_3, Cr_3C_2, Cr_2O_3, MgO, $3Al_2O_3 \cdot 2SiO_2$, SiC, W_2C, TiC, Zr_2O_3, $SrSiO_4$; testing methods, properties (heat resistance to 2500° C. and resistance to erosion by hot gas jets) and production by metal and ceramics spraying for ply-coated materials used in missle construction. (T24e, K11b, L23; 6-70, 17-57)

204-T. Water Treatment for Corrosion Control of Aluminum in Low Temperature Nuclear Reactors. E. W. Jackson and H. F. Molineaux. Corrosion Prevention & Control, v. 8, Aug. 1961, p. 36-38, 54.

An ion exchange system is used to purify the reactor cooling water in low temperature nuclear reactors and thereby to prevent the corrosion of Al reactor parts. The design and operation of the ion exchange system is discussed in terms of corrosion resistance. 6 ref. (T11, R-general; Al)

205-T. Pockets Cut Electrolytically in Bluckets. Metalworking Production, v. 105, Aug. 16, 1961, p. 77.

Electrochemical machining is used to sink pockets in superalloy turbo fan blades made integrally with the buckets of the turbine. Use of an electrode contoured to shape of the cavity saves time and capital equipment cost as compared to use of profiling machines. (T24b, G24d; SGA-h)

206-T. Stainless Steel Powder Metallurgy Aids Camera Design. Metalworking Production, v. 105, Aug. 16, 1961, p. 60.

Sintered AISI type 316 stainless steel is coined to specifications with a tolerance of ± 0.001 in. Powder metallurgy allows fabrication of small, intricate shapes of corrosion resistant metal. (T9p, H15, H16n, 1-52, 17-57; SS)

207-T. (Russian.) Application of High-Strength Steel in Welded Metal Construction. N. P. Mel'nikov, L. I. Gladshtein and B. D. Malyshev. Avtomaticheskaya Svarka, v. 14, June 1961, p. 47-55.

Possibility of reducing weight in welded structures using high-strength steel. Use of special alloys, cold deformation, heat treatment or a combination of these methods to increase the strength of the steel. 10 ref. (T26, G23, J1, 2-60; ST, SGB-a, 7-51, 17-57)

208-T. Aluminium Motor Car Cylinder Blocks. Aluminium Courier, no. 54, June 1961, p. 18-22.

Survey of European and American Al alloy engine blocks and crankcases. Casting processes, alloy properties and economic considerations as compared to cast iron components. (T21b, T21c, E-general; Al-b, 17-57)

209-T. Recent Developments in Materials of Construction. T. R. Bott. British Chemical Engineering, v. 6, Sept. 1961, p. 617-620.

Discussion of the corrosion resistance of Ta, Ti, Zr, Be, Cb, Hf and wrought Ni-base alloys for use in chemical plants. Applications of plastics, fiber wound laminating techniques and high-temperature ceramics are outlined. (T29, R6, R7, 17-57; Ni-b, Ta, Ti, Zr, Be, Cb, Hf, SGA-g)

210-T. Recent British Technical Progress in Aeronautics. Pt. 1. Structural Design. A. F. Newell. Aircraft Engineering, v. 33, Sept. 1961, p. 248-250, 251-254.

High-strength ferritic and chromium-nickel steels require high strength fastening methods such as puddle welding in airplane applications. Technological parameters of design, materials selection and construction for honeycomb sandwich and corrugated structures. (T24a, K6, 17-51, 17-57; SS, SGB-a, 7-59)

211-T. The Importance of Wire in Spring Design. Hal McVey. Wire and Wire Products, v. 36, Sept. 1961, p. 1141-1191.

Diameter, cast and torsional stress and specifications are considered as factors in wire spring design. Torsional stress in compression and extension springs are investigated as a function of load application. (T7c, Q1, 3-73, 4-61)

212-T. Pressure Die Cast Aluminum Cylinder Blocks. Machinery (London), v. 99, Aug. 30, 1961, p. 511-518.

Review of the design and production of Al cylinder blocks having integrally cast iron liners. Die design and testing of centrifugally cast cylinder liners are discussed in several commercial applications. (T21b, 1-52; Al, CI, 5-61)

213-T. Welding Polaris Missiles by Hot Edge-Upsetting. R. D. Libert. Metalworking Production, v. 105, Aug. 23, 1961, p. 51-53.

Hot upsetting, rolling, scarfing, welding, stress relieving and inspecting by magnetic particle and X-ray methods of steel sheet expanded to form a 54-in. cylinder for the body of the Polaris missle chamber. (T24e, F21e, F23, J1a, K3s; ST, 4-53)

214-T. Trucks Out, Welded Pipe in for Chicago Plane Fueling. Welding Engineer, v. 46, Sept. 1961, p. 50-51.

Carbon steel pipe, 6-12 in. in diameter, is welded to form fueling network composed of storage tanks, 39 50,000-gal. satellite fuel tanks and "finger" disposal points. (T24d; CN, 4-60, 7-51)

215-T. U. S. Space Capsule--How It Was Welded. Welding Engineer, v. 46, Sept. 1961, p. 59.

Tig welding and resistance seam welding of Rene-41 Ni alloy and AMS-4901 Ti alloy sheet in production of capsule. (T24e, K1d, K3p; Ni-b, Ti-b, 4-53)

216-T. (German.) Experiences of the Uralchimmasch Works in the Use of Ply Metals in Construction of Chemical Apparatus. W. M. Makarow. Chemische Technik, v. 13, Apr. 1961, p. 220-223.

Fabrication methods such as cutting, straightening, rolling, stamping and electric welding of St. 3 steel plated with 1 Cr 18 Ni 9 Ti steel and St. 20 cobalt steel plated with Cr 18 Ni 12 Mo 2 Ti in the production of corrosion resistant chemical apparatus. (T29, 1-52, 17-57; ST, 8-66)

217-T. Annual Report for 1960 Metallurgy Division. Argonne National Laboratory. U.S, Office of Technical Services, ANL-6330, n.d. 273 p. $3.50.

Review of development and fabrication programs and reactor research with experimental boiling and boiling water reactors. Preparation and properties of materials, problems in metal physics and ceramic materials research. (T11)

218-T. Porous Metal Fillers: Application to Feed Materials Production. T. Shapiro and E. L. Halstead. Union Carbide Nuclear Co. U. S. Office of Technical Services, K-1479, 25 p. $.50.

Porous filter elements of 316 stainless steel and Inconel material far exceed the on-stream life of porous carbon tubes in filtering the UO_2 product from gaseous hydrogen-water vapor mixtures recycled through solid gas systems at the Feed Materials Plant, Oak Ridge, Tenn. (T29, 17-57; SS, Ni-b, 6-71)

219-T. New Columbium-Treated Steel Stakes Claim on Pipe Lines. Iron Age, v. 188, Sept. 28, 1961, p. 94-96.

New steel, XC60, gives a minimum yield strength of 60,000 psi. Cb tends to form a high grain structure thereby increasing mechanical properties. Savings derive from less required steel tonnage because of higher strength, lower field welding and material handling costs and reduced freight costs. (T26r, Q-general, 2-60; ST, Cb, 17-57)

220-T. The Development of Aluminum Off Highway Rock Bodies in Canada. R. A. Esmonde. Society of Automotive Engineers, no. 414 A, 1961, 9 p.

Application of Al-Mg alloys,with good as-welded properties and welding properties, joined by inert gas shielded process to unit design. Instrumentation and procedure for laboratory and field testing of maximum stress and abrasion resistance. (T4a, Q-general; Al, Mg, 7-51)

221-T. How Materials Are Used in the Mercury Capsule. Robert J. Fabian. Materials in Design Engineering, v. 54, Sept. 1961, p. 128-132.

Application of Rene-41 for external shingles on the conical portion of the capsule; glass for windows and antenna shields; Ti for the primary structure of the capsule including the pressurized inner skin; Be for the cylindrical section of the exterior structure; and plastics plus an Al honeycomb combined to provide a rigid, composite couch structure that will carry the astronaut in safety and comfort. (T24e; Ni-b, Ti, Be, Al, NM-d, NM-f42, 7-59)

222-T. Hypersonic Fasteners Use "Exotic" Forms and Materials. Irwin Stambler. Space/Aeronautics, v. 36, Sept. 1961, p. 56-62.

Applications of Cb, Mo and W alloys in fasteners for future aerospace vehicles, to function at temperatures up to 4500° F. Helical cam contact surfaces are used instead of threads.

Coating methods and materials are investigated to provide corrosive resistance. (T7f, T24e, L-general, 1-52, 1-74, 17-57; SGA-g, Cb-b, Mo-b, W-b)

223-T. Silver--A Material of Construction for Handling Hydrochloric Acid and Ammonium Chloride. C. Auchmoody. Engelhard Industries, Inc. Technical Bulletin, v. 1, Mar. 1961, p. 135.

Ag replaces ceramics, silica, Monel and Inconel for fabrication of pipes, gas scrubbers and cyclonic separators in order to prevent corrosion due to HCl and NH_4CL Economic considerations. (T29, R6; Ag, SGA-g)

224-T. (German.) Aluminum as a Substitute for Copper. Elektrie, v. 15, June 1961, p. 182-183.

Applications of Al as a conductor require consideration of development of Al alloys and ply metals having increased strength; anodic insulation of Al conductors; development of soldered, welded and mechanical joints. (T1; Al-b, 7, 17-57)

225-T. Press Brake Forming Aluminum Light Reflectors. Modern Metals, v. 17, Sept. 1961, p. 34.

Forming and assembling of contoured Al reflectors for application in new powerful fluorescent luminaires. Sheet Al, even after anodizing, restricts reflected light to a narrower zone than a painted or porcelain enameled surface. (T1a; Al, 4-53)

226-T. Aluminum in Automotive Parts. Harry E. Phipps. Modern Metals, v. 17, Sept. 1961, p. 56, 58, 62, 64.

Selection of proper Al alloy, temper and processing procedures for parts such as bumpers, wheel covers and body components. Tabulation of the nominal composition of wrought Al sheet alloys used for auto applications. (T21, 17-57; Al-b)

227-T. The Use of Galvanized Strip in Automobile Manufacture in the U. S. A. K. P. Scott and M. H. Davies. Sheet Metal Industries, v. 38, Sept. 1961, p. 631-636, 643.

Application of galvanized steel in critical areas of the main body and underbody assemblies for reducing the effect of corrosion on body strength. Selection of steel for galvanizing and welding parameters for the successful spot welding of Zn coated sheet. (T21, K3n, 1-52; ST, 8-65, 17-57)

228-T. Quenched and Tempered Alloy Steels Now in Rolled Structural Shapes. Industrial Gas, v. 40, Aug. 1961, p. 6-7.

Standard I-beams, channels and angles of USS T-I and T-I Type A constructional alloy steels, 9% nickel steel for cryogenic applications at temperatures as low as -320° F. and HY-80 naval armor steel are commercially produced to replace conventional plate. (T26, 1-67, T2g, 17-57; ST, 4-57)

229-T. (Italian.) Metallurgical Products in Common and Special Steels. Angelo Bellini. Rivista di Meccanica, v. 12, July 1961, p. 45-47.

Classification, chemical composition, physical characteristics and criteria for selection of steels with applications in electric machine parts, taps for threading and molds for plastic material. (T-general; ST, 17-57)

230-T. The Case for the Aluminum Engine. James M. Smith. Society of Automotive Engineers, 385A, 1961, 28 p.

Sand casting, die casting and permanent mold casting of Al alloys to produce accurate, light weight cylinder blocks and heads as well as other accessory parts including intake manifolds, water and oil pumps, oil filter bases and starter and generator end plates. 10 ref. (T21b, E-general, 1-52, 17-57; Al-b)

231-T. Aluminum Foil Solves Antenna Reflector Problem. Western Metalworking, v. 19, Sept. 1961, p. 49.

The foil which forms the reflector is only 0.002 in. thick. A flat sheet of the foil is clamped between rings and heated in an oven to 400° F. At this temperature the foil is blown by compressed air to form a bubble. This bubble is then stretch formed over a mold. A skin of plastic is laid over the back of the foil and cured. The preformed Al honeycomb is laid atop the plastic and bonded in place, giving strength to the reflector. (T1; Al, 4-56, 17-57)

232-T. Nonnuclear, Nonmetallic Usés of Rare Earth. Mark M. Woyski and Walter J. Silvernail. Chapter 21 from "The Rare

Earths". John Wiley & Sons, Inc., New York 16, 1961, p. 512-521.

Application of rare-earth oxide mixtures to the preparation of alloys, polishing and coloring of glass and manufacture of carbon-arc electrodes. (T-general, 17-57; EG-g45, 14-68)

233-T. Nuclear Application of Yttrium and the Lanthanons. W. Kermit Anderson. Chapter 22 from "The Rare Earths". John Wiley & Sons, Inc., New York 16, 1961, p. 522-569.

Nuclear properties indicate applications in various areas including neutron absorbers, hydrogenous-moderator carriers, diluents in oxide-cermet fuels, structural metals and coprecipitants of fission-product poisons. 59 ref. (T11; EG-g45)

234-T. What Steel Shall I Use...for Heat Treated Parts in Automobile, Trucks and Tractors? Metal Progress, v. 80, Oct. 1961, p. 66.

In today's automotive components, parts to be heat treated are made from a variety of carbon and low-alloy steels. Wide use is also made of selective heating processes for hardening. (T21, J-general; ST, 17-57)

235-T. What Metal Shall I Use...for Bearings to be Employed at Elevated Temperatures? H. M. Lampert. Metal Progress, v. 80, Oct. 1961, p. 101.

In selecting materials for high-temperature bearings, engineers must consider the type of environment and the lubricant as well as the maximum temperature that the bearing is to withstand. (T7d, 2-62; SGA-c)

236-T. Fabricating Inert Components for Polaris Propulsion System. G. G. Whipple. Western Machinery and Steel World, v. 52, Sept. 1961, p. 64-68.

Use of V-bearing low-alloy steel with good toughness and weldability to fabricate cylinders either by rolled and welded technique or by shear spinning, followed by molten salt bath heat treatment. (T24e, F26p, G13, J2j, 1-52; AY, V)

237-T. Steam Pipework for High Temperatures. J. S. Blair. Engineering, v. 192, Sept. 22, 1961, p. 394-395.

Creep properties and weld strength of high-temperature steels and super-alloys containing Cr, Ni, Mo, Co, V, W, B, Ti, Cb and Al for applications in steam power stations and nuclear power plants. Design considerations and nondestructive testing methods are outlined. (T11, W11g; SGA-h, ST, 4-60, 17-57)

238-T. Bolt Breakthrough With Cold Worked Stainless. J L Explorer, v. 2, no. 3, 1961, p. 5.

Production of type 304 cold worked austenitic stainless steel breakneck fasteners having minimum shear strength of 70,000 psi. and a tensile strength of over 100,000 psi. Heat treatment after forming is eliminated. (T7f, Q2g, Q27a, 1-52; SS-e)

239-T. An Appreciation of Missile Structures. A. F. Newell. Royal Aeronautical Society, Journal, v. 65, July 1961, p. 483-497.

Review from the viewpoint of design including constructional trends, manufacturing techniques, safety factors, types of body joints, honeycomb construction, thin shells, missile structural design and filament-wound pressure vessel design. Special techniques in milling, welding and design to attain high strength/weight ratios with steels, Al, Ti, Mg, plastic and glass. 17 ref. (T24e, 1-52, 17-51, 17-57; ST, Al, Mg, Ti, NM-d, NM-f42)

240-T. Materials for Reactors--Some Basic Questions. G. W. Greenwood and G. K. Williamson. New Scientist, v. 11, Sept. 28, 1961, p. 787-790.

Use of the electron microscope to study the mechanics of radiation damage, ionization damage, vacancies, crystal lattice distortion, growth, lowered creep strength, hardness and brittleness in uranium, graphite, steel and uranium dioxide caused by neutron collisions. (T11, M26, M28n, Q-general, 2-67; ST, NM-k36, U)

241-T. Aluminum Die Castings Save Weight. Precision Metal Molding, v. 19, Oct. 1961, p. 76.

The application of Al die castings instead of sand castings in the manufacture of strong and light parts of crop dusters. (T3; Al, 5-61)

242-T. Fiberglass Motor Case in Polaris Program. J. A. Kies and H. Bernstein. Report of the NRL (Naval Research

Laboratory) Progress, Sept. 1961, p. 31-32. (Available as PB 171322 from U. S. Office of Technical Services, Washington 25, D.C.) $1.25.

Comparison of the practical limits of usable tensile strength-density ratios for steels, Ti-alloys and fiberglass-reinforced plastics for application in rocket motor cases. Application of filament winding techniques to production of cases. Effect of shrinkage stresses on cracking and crazing and failure mechanisms of the plastics. (T24e, G-general; Q-general, 3-66; NM-d, NM-f42, ST, Ti-b, 17-57)

243-T. Use of Tantalum in Chemical Plants. Corrosion Prevention & Control, v. 8, Sept. 1961, p. v-vi.

Acid-resistant qualities of Ta lead to applications where difficulties in welding are overcome by first riveting strips of metal to the steel base and then welding the Ta liner to these backing strips in an Ar atmosphere. (T29, K1d, 1-52; Ta)

244-T. Clad and Coated Steel Sheets Are Increasingly Used to Minimize Corrosion. Corrosion Prevention & Control, v. 8, Sept. 1961, p. 43-44.

Clad or plastic-coated steel plates can replace stainless steel, Ni or Monel in the construction of pressure vessels and other containers only one surface of which is exposed to corrosion. Cladding metals include Cr, Al, Ti, Cb, Ni and Monel in various proportions. (T26q, T29, 1-22, L26p, R-general, 17-57; ST, Al, Cb, Cr, Ni, Ti)

245-T. Aluminum Bright Trim. Aluminum Courier, no. 55, Sept. 1961, p. 4-14.

The use of anodized Al alloy in automobile trim and household applications. Composition and mechanical properties of alloys based on high purity Al including brightness, film thickness and corrosion resistance. (T21a, T10c, Q-general, 1-52; Al-b, 8-73)

246-T. Aluminum in Practice. Pt. 23. Special Fasteners for Aluminum. Aluminum Courier, no. 55, Sept. 1961, p. 18-22.

The design, applications, composition and the method of setting for various types of blind rivets, bolt fasteners and welding studs used to fasten aluminum sheet and components in aircraft, structural and automotive applications. (T7f, 1-52; Al)

247-T. First Success With Cast Uranium. S. D. Chandley, D. G. Fleck and B. W. Crocker. Modern Castings, v. 40, Oct. 1961, p. 41-44.

Production of spotting rounds for atomic workhead firing of weapons from U-8% Mo using a coaxial melting casting process with a refractory mold. (T2j, E15, 1-52; U, Mo)

248-T. (English.) Some Notes on the Design of Chemical Equipment in Aluminum. E. F. Boon and F. C. A. A. van Berkel. Lastechniek, v. 27, Apr. 1961, p. 84-90.

Alloys are compared as construction materials with BS 1501-151 Grade A steel and AISI 316 stainless steel on the basis of cost, strength, thermal stress and strength-weight ratio. 15 ref. (T29, Q-general, 17-51; Al-b, ST)

249-T. (English.) A Recent Specification for Fusion Welded Aluminum and Aluminum Alloy Pressure Vessels for Class I Duties. F. Smith. Lastechniek, v. 27, Apr. 1961, p. 119-125.

Design requirements, including material selection and mechanical testing, with reference to the specification, in relation to those given for carbon steel in British Standard 1500, 1958, Pt. 2. (T26q, 1-54, 11-62, 17-51, 17-57; Al, 7-51)

250-T. How About Aluminum Auto Bumpers. Products Finishing, v. 26, Oct. 1961, p. 60-68.

Forming and anodizing Al automobile bumpers and electroplating with Ni and Cr. Evaluation of bumper strength, rigidity, dent resistance, brightness, abrasion and corrosion resistance and plating adhesion. (T21c, L17, L19, 1-52; Al, Ni, Cr)

251-T. The Use of Galvanized Strip in Automobile Manufacture in the U. S. Metal Finishing Journal, v. 7, Sept. 1961, p. 346-347.

Applications of steel sheet and strip which has been hot dip galvanized, electrogalvanized or sprayed with Zn-rich paints with an evaluation of coating weights and techniques. (T21, 17-57; ST, 4-53, 8, Zn)

252-T. 11 Die Castings Combine to Cut Cost by 90%. Materials in Design Engineering, v. 54, Oct. 1961, p. 15.

Design of die cast Zn counter assembly cases and gears which replace Al and brass parts produced by machining. (T7, 17-57; Zn, 5-61)

253-T. Electrical Insulations for 930° F. Plus. Robert J. Fabian. Materials in Design Engineering, v. 54, Oct. 1961, p. 100-107.

Comparison of air drying cements, chemical setting cements, sintered materials, alumina powder, silicone resins and hydraulic setting compounds as high temperature potting and incapsulation materials. Properties of ceramic coated, anodized, glass-served, fluoride coated and enamel coated magnet wires of stainless or Ni-clad copper. 16 ref. (T1b, T1m, 17-57; Cu, SS, Ni)

254-T. Aluminum Lightens Power Lines. Materials in Design Engineering, v. 54, Oct. 1961, p. 110.

Applications of Al in the development of extra high voltage transmission lines. (T1b, 17-57; Al)

255-T. The Manufacture of Welded Stainless Steel Tubing for Maximum Corrosion Resistance in Kraft Evaporators. S. E. Doughty and W. J. Comerford. Tappi (Technical Assoc. of the Pulp and Paper Industry), v. 44, Sept. 1961, p. 609-613.

Review of factors which cause failure leads to the recommendation of manufacturing and testing processes and of a method for removing carbonaceous deposits which build up during the operation of the evaporator. (T29r, R-general, 1-52; SS, 7-51)

256-T. Materials of Construction for Chemical Plant--New Metals. A. H. Barber. CPE (Chemical and Process Engineering and Atomic World), v. 42, Oct. 1961, p. 451-458.

Physical and mechanical properties, fabrication, application and economic considerations of Be, Zr, Cb and Ta. 22 ref. (T29, 17-57; Be, Cb, Ta, Zr)

257-T. (Czech.) Quality Improvement of Railroad Rails. Slavomir Horejs. Hutnicke Listy, v. 16, Aug. 1961, p. 533-539.

Improvement of yield and tensile strengths, elongation and area reduction by correct choice of ingot size and shape, heating and rolling parameters, steelmaking methods, cooling velocities and heat treatments after rolling. 19 ref. (T23q, D-general, F23, J-general, Q23, Q27a; 5-59)

258-T. Put Eddy Current to Work. Robert J. Cohen. Product Engineering, v. 32, Oct. 16, 1961, p. 97-99.

Materials include Cu, 302 and 303 stainless steels, Al alloy, brass, Au, Ag and mangamin. Application to the transmittal of small forces to or from moving bodies without contact and to the determination of position and clamp vibrations as in d-c. integrators, a-c. relays, tachometers, inertia dampers, position transducers and servomotor-generators. (T1, P16s, 1-52; SS, Ag, Al-b, Au, Cu-b, Mn-b)

259-T. Superconducting Magnets. R. H. Kropschot and V. Arp. Cryogenics, v. 2, Sept. 1961, p. 1-15.

Review of fundamentals, materials, thin film characteristics, applications and economics. Types include air core solenoids and ferromagnetic cores. Design considerations including electromagnetic forces, time constants, field distribution and operational precautions. 78 ref. (T1g, P15g, 1-67, 10-54)

260-T. Equipment for Ultrahigh Pressures. Alexander Zeitlin. Mechanical Engineering, v. 83, Oct. 1961, p. 37-43.

Operating principles and equipment design for metal,nonmetal and plastic anvils, pistons, rams and cylinders with consideration of yield strength at high pressures. 15 ref. (T7, Q23b, 3-74, 17-57)

261-T. Research for Improved Cutting Tools. J. Taylor and J. S. Jackson. Engineering, v. 192, Oct. 13, 1961, p. 490-491.

Production of cemented carbide cutting tools by powder metallurgy. Tools made of the carbides of W, Ta, Ti, Cb, Cr and V are bonded by Co and tested on 0.4% carbon steel, Nimonic 80 A alloy and 12% chromium stainless steel. Determination of cutting performance with respect to toughness, machinability, wear resistance and tool life. (T6n, Q9; W, Ta, Ti, Cb, Cr, V, 6-69, 17-57)

262-T. Fractured-Race Bearings Broaden Design Horizons. Machinery, v. 68, Sept. 1961, p. 114-118.

Ball bearings designed with split outer race have larger complement of balls which give greater load carrying capacity and longer service life when compared to conventional ball bearings of similar dimensions. (T7d)

263-T. How to Evaluate the Effects of Spline Misalignments. Pt. 2. Earle Buckingham. Machinery, v. 68, Sept. 1961, p. 123-130.

Procedures for analyzing and calculating the various effects of misalignments on straight and crowned splines. Tables of comparative wear and deformation data showing the effects of changing the number of teeth, material hardness and misalignment angle for splines of various steels. (T7, Q9; ST, 17-57)

264-T. British View Materials for Supersonic Transport. P. F. Kiddle and P. J. McKenzie. SAE Journal, v. 69, Nov. 1961, p. 64-66.

An evaluation of Al and Ti alloys, various types of stainless steel and ultra high tensile steels for use in supersonic aircraft. Survey of methods of forming, heat treating and welding these materials to produce optimum mechanical properties including formability and high temperature stability. (T24; SS, Ti, Al, SGB-a, 17-57)

265-T. (Italian.) Nickel Alloys and Steels in Catalytic Reforming Plants. Il Nickel, no. 93, Aug. 1961, p. 7-8.

Pipes made of 25-20 and 35-15 stainless steel and Incoloy are used in catalytic reforming plants to provide high pressure and temperature resistance. Data are given for operating conditions and comparative service life. (T29d, 2-62, 3-74; SS, Ni-b, SGA-h, 17-57)

266-T. Cutting Tool Evaluation. Metal Cuttings, v. 9, Oct. 1961, 7 p.

Methods for evaluating cutting tool and drill performance in terms of cutting speed, tool geometry and size. Effects of lubricants and abrasive and temperature sensitive wear. (T7n, G17, 17-52)

267-T. Aluminum Structural Engineering in Britain. R. M. Davies. Light Metals, v. 24, Oct. 1961, p. 279-284.

Fabrication of roof structures, crane jibs, tunnel linings, bridge decking and sewage structures from H30 WP, N6, H9 WP and H15 WP Al-based alloys. Data are given for 0.1% proof stress, U. T. S. and per cent of elongation of the alloys. (T26, Q-general; Al-b, 17-57)

268-T. Test Stand Evaluation of Oil-Film Roll Neck Bearings. Samuel S. Rickley and Norman A. Wilson. Iron and Steel Engineer, v. 38, Sept. 1961, p. 104-115.

Determination of the operating characteristics of roll neck bearings made of Al, babbitt and Fe bars coated with chrome, Cu, Cd, acrylic, Teflon or epoxy. Bearings are subjected to high-speed rubbing tests under loads up to 180,000 lb. using lubricating oil with viscosities of 200-SSU to 2600-SSU. Bearing temperature varied from 40-270° F. (T7d, Q9; Al, Fe, SGA-c, 8, 17-52)

269-T. A Standardized Method for Rating Roller Bearing Load-Carrying Capacity. E. C. Denne, Jr. Iron and Steel Engineer, v. 38, Sept. 1961, p. 204-213.

Determination of the basic load rating, load carrying capacity and life expectancy of hardened steel roller bearings with spherical, cylindrical and tapered designs. (T7d, 17-52; ST, 17-57)

270-T. Thorium as a Nuclear Fuel. Metal Progress, v. 80, Nov. 1961, p. 106.

Fuel materials under development include both metal alloys and ceramics. These include Th-U alloys with up to 20% (by weight) U, Pu-Th alloys; development of Th-containing ceramics includes work on a wide variety of materials such as mixed oxides, carbides and silicides of Th and U or Th and Pu. (T11g, 10-54; Th, Pu, U, 17-57)

271-T. (German.) Noble Metals in Apparatus Construction. Wilhelm Lehrnickel. Dechema Monographien, v. 39, no. 600-615, 1961, p. 239-253.

Physical and mechanical properties of Au, Ag and Pt metals and corrosion resistance to acids and alkaline compounds at elevated temperatures. Properties of Au, Ag and Pt-plated cast iron and steel parts such as valves, vessels, gaskets and expansion fittings. (T-general, L-general, P-general, Q-general, R-general; EG-c31, 17-57)

272-T. Temperature Sensitivity in Germanium Transistors. James D. Mason. Aerospace Engineering, v. 20, Oct. 1961, p. 27, 95.

Screen testing of moisture contamination effect on the temperature cycling efficiency. The "gettered" transistor, incorporating a molecular sieve material added to the transistor interior, is not affected by temperature sensitivity. (T1k, 2-61; Ge, 17-57)

273-T. (German.) Materials for Missile Construction. R. Scherer. Dechema Monographien, v. 39, no. 600-615, 1961, p. 1-23.

Review of physical and mechanical properties and application of materials for missillconstruction including Be, Mg and Al; hardenable, age hardenable, stainless and toolsteels; superalloys having Fe-Ni, Ni and Co-base; refractory metals Mo, Cb, W; and nonmetals such as cermets, ceramics, graphite, plastics and compound materials. (T24e, P-general, Q-general; EG-a39, EG-d37, EG-a38, NM, ST, 17-57)

SECTION W

PLANT EQUIPMENT

1-W. (Polish.) Air and Gas Recuperator Practice. H. Babezynski, J. Kokot and J. Janovcki. Hutnik, v. 27, July-Aug. 1960, p. 278-283.

Fabrication of cast iron and carbon steel gas and air recuperators for metallurgical furnaces. Methods for control of heat exchange; removal of dust accumulated from gas impurities. (W17; CI, CN, 17-57)

2-W. (Italian.) The Metallurgical Blast Cupola: Theory and Practice. Guglielmo Somigli. Fonderia Italiana, v. 9, July-Aug. 1960, p. 312-320. (W18d, E10a)

3-W. The New Basic-Bessemer Steel Plant of the Societe Cockerill-Ougree (Belgium). Emile Foulon. Acier-Stahl-Steel, v. 25, Sept. 1960, p. 349-354.

Design and construction of plant having five 60-ton converters and producing 90,000 metric tons of raw steel monthly. (W10, 18-67)

4-W. Tube-in-Strip--New Approach to Heat Exchange. Welding Fabrication and Design, v. 4, Sept. 1960, p. 17-18.

Development of a multichannel Cu sheet mill product with integral tubes which can be inflated for use as a heat exchanger. (W13b; Cu, 4-53, 17-57)

5-W. Scrap Honeycomb Makes Tools. W. C. Voth. American Machinist/Metalworking Manufacturing, v. 104, Nov. 28, 1960, p. 137-139.

Use of Al honeycomb bonded with glass cloth, epoxy resin and sheet polyvinyl in strong, lightweight aircraft assembly tools. (W1; Al, RM-p, 7-59, 17-57)

6-W. (Spanish.) Structure, Properties and Use of Chromite-Magnesia Refractory Brick in Openhearth Furnaces. Eugenio Perez Blanco. Instituto del Hierro y del Acero, v. 13, July-Sept. 1960, p. 677-700.

Manufacture of chromite and MgO brick. Composition and structure of these materials and their influence on physical, chemical and mechanical properties of brick. Proposed specification for a 75% chromite-25% MgO brick and requirements for raw materials to be used. 32 ref. (W18r; RM-h)

7-W. (German.) Operational Experiences With a Maerz-Boelens Openhearth Furnace of Novel Design. Caspar Heinrich Pottgiesser, Hans-Jurgen Darmann and Egbert Knackstedt. Stahl und Eisen, v. 80, Oct. 27, 1960, p. 1487-1492.

Lining wear, heat consumption, charging rate and efficiency of a coke oven gas and oil heated 150-ton nontiltable furnace. (W18r)

8-W. Annealing Equipment for the Malleable Iron Foundry. B. A. Ruediger. Foundry, v. 88, Dec. 1960, p. 85-89.

Batch and continuous furnaces for the heat treatment and drawing of pearlitic malleable Fe castings are discussed in terms of their operation, cost, operating expenses and product quality. (W27, J-general; CI-s, 5)

9-W. Analysis of Operational Factors Derived From Hot Strip Mill Tests. John S. Ride. Iron and Steel Engineer, v. 37, Nov. 1960, p. 77-90.

Measurement of interstand speeds for the head and tail ends of a coil in the finishing train of a hot strip mill using a cascaded strain gage technique. Data

for actual drafts taken in each stand, roll separating force, amount of forward slip and amount of slip between mating work and back-up rolls. 3 ref. (W23, 1-52)

10-W. (German-French.) Electronically Steered Resistance Welding Equipment. Pt. 1. F. Gallmann. Zeitschrift fur Schweisstechnik, v. 50, Nov. 10, 1960, p. 330-340.

Electronic equipment used in automatic spot welding, resistance butt welding and flash welding. (W29, K3)

11-W. (Translation-Brutcher no. 4849.) Use of Steel Molds for Large Steel Castings. S. I. Smolenskii, N. N. Guglin, G. F. Zasetskii, A. K. Provornyi and V. A. Tyutev. Liteinoe Proizvodstvo, Mar. 1959, p. 23-26.

Classification of steel molds into five groups by wall thickness, rigidity and bottom design. Their use for production of heavy steel castings whose inside surfaces are shaped by sand cores and the outer ones by the molds. Deep cracks and tears as main reason for extensive mold repairs and final scrapping; effect of mold design features on tears; relation between tears and firechecking; effect of high rigidity on tears. (W19g, 17-51)

12-W. (German.) Steels for Pressure Vessels for Atomic Reactors. E. Zastrow. Stahlbau, v. 29, Nov. 1960, p. 329-333.

Selection and properties of steels used in British (gas cooled) and American (water moderated) reactors for pressure vessels with reference to chemical analysis, mechanical properties, corrosion resistance to CO_2 and water at temperatures to 400° C., aging caused by radiation and radioactive contamination depending on steel compositions. (W11p, Q-general, R-general, 2-60, 2-67; ST, 17-57)

13-W. Electrically Heated Elevator Furnaces for Annealing Blackheart-Malleable Castings. J. M. Paton. Foundry Trade Journal, v. 109, Nov. 10, 1960, p. 595-598.

Design and operation of furnace installations consisting of high and low temperature elevator type furnaces and three movable bogie-hearths. Comparison with furnaces fired by powdered fuel. (W27, J23; CI-s)

14-W. Tungsten-Element Furnace With Zirconia Lining Promising for Heating in the Range of 4000° F. Industrial Heating, v. 27, Dec. 1960, p. 2580, 2582, 2584.

Design of an ultra high temperature furnace for sintering of relatively large pressed tungsten ingots. Refractory for the high temperature zone is composed of pure zirconia. (W26e, H15; W, 5-59)

15-W. (Japanese.) Studies on Quenching Media. Pt. 16. The Effect of Flow Rate on the Cooling of Liquids. Masayoshi Tagaya, Imao Tamura and Yoichi Murakami. Japan Institute of Metals, Journal, v. 24, Oct. 1960, p. 676-679.

Cooling rate curve for Ag specimens of various diameters quenched from 800° C. in oil moving at different rates in turbulent streams. Kinematic equations are derived for determining cooling ability of the oil in terms of flow rate for application to quench tank and agitation equipment design. 3 ref. (W28p, J26; Ag)

16-W. (German.) Construction and Production Experiences With Electric Annealing Furnaces for Semifinished Light Metals. Rudolf Meyer. Neue Hutte, v. 5, Nov. 1960, p. 655-660.

Design of radiation furnaces and one and two-chamber furnaces with longitudinal and transverse air revolution for annealing at temperatures up to 500° C. Construction of furnace from nonheat resistant steel ST 00 and heating elements from Fe-Cr-Al alloys. Power consumption and furnace efficiency. (W27)

17-W. (German.) Modern Heavy Plate Rolling Mill. W. Lehnert. Neue Hutte, v. 5, Nov. 1960, p. 678-683.

Machinery and operations in modern plate rolling from slab, ingot or bloom including transport and storing of blooms and methods of cleaning, heating and descaling. (W23, 1-52)

18-W. (German.) Effect and Elimination of Humidity Absorption of Unalloyed Lime-Basic Electrodes. E. Kauhausen and S. Sadowski. Schweisstechnik, v. 14, Nov. 1960, p. 121-126.

Water absorption in electrodes with and without water-repellant treatment during storing in air with 43-98% relative humidity. Method and apparatus for measuring water content of electrode coatings. Welding faults with emphasis on porosity, caused by

water containing electrode coatings. (W29h, K9)

19-W. Is End in Sight for Stick Electrodes? Harry H. Thomasson. Canadian Metalworking, v. 24, Jan. 1961, p. 51-53.

Analysis of the advantages offered by the coiled electrode. These include in addition to the elimination of the losses and nuisance of the stub ends, freedom from irregularities due to electrode changeover, high rate of metal deposition, high arc density and deep penetration. (W29h)

20-W. Giant Press Lifts Size Limits of Closed Die Forgings. Iron Age, v. 187, Jan. 12, 1961, p. 66-67.

Design and operation of a new forging press having a 20,000 ton capacity unit which makes possible the forging of jet engine parts, turbine cases, shafts and atomic power-plant parts composed of supperalloys, stainless steel, Mo, Ta, W or Cb and also allows vertical extrusion through the press. (W22p, F22; SGA-h, SS, Mo, Ta, W, Cb)

21-W. Unit Couples Heat Treating Steps. Iron Age, v. 187, Jan. 12, 1961, p. 70.

Design and operation of a machine for heat treating forged steel sledge-hammer heads which combines steps of heating, quenching and tempering in a continuous operation. (W27, J-general; ST)

22-W. (German.) 30 Ton Travelling Crane With All-Welded Aluminum Box Type Girder. Heinrich Degenhardt and Egon Bernhoft. VDI-Zeitschrift, v. 102, Dec. 11, 1960, p. 1742-1749.

Design and construction of an all-welded AlMg5F24 alloy single-beam box bridge for a dockyard travelling crane with 30 tons capacity and 25.9 meters span. Data are given for fatigue strength, bending moment and moment of inertia. (W12q, Q7a, Q5; Al-b, Mg)

23-W. Cold Rolling Mill Expansion in New Jersey. Engineer, v. 210, Nov. 28, 1960, p. 651-652.

Integration and expansion of the Athenia Steel Div. of the National Standard Co. to improve quality of high-carbon strip steel. New equipment includes a three-stand tandem wire flattening mill, a strip steel cluster rolling mill, slitting lines, large-capacity annealing furnaces. A wide dimensional variety of flat steels and flattened round wire are produced. (W23f, F23, 1-67; CN)

24-W. Production Eyes New Furnace for Vacuum Heat Treating. Iron Age, v. 187, Jan. 19, 1961, p. 84-85.

Design of an insulated vacuum furnace for heat treating and brazing of stainless and high-temperature alloy parts. (W27, W29m, J-general, K8, 1-73; SS, SGA-h)

25-W. Program Control for Forging Press and Manipulator. Tom Bishop. Metal Progress, v. 79, Jan. 1961, p. 94-96.

Motions of a forging press and a manipulator are controlled by electronic devices so as to avoid necessity for reheating, to speed up forging process and avoid wastage of heat. Hydraulic manipulator diagrammed. (W22p, W12s, 18-74)

26-W. Feeding Billet Furnaces. Metal Industry, v. 97, Dec. 16, 1960, p. 498.

Automatic loading and unloading equipment operated by compressed air is used to feed billets to a rotary hearth furnace for heating. (W18b)

27-W. The Advantages of Aluminum Foil for Transformer Windings. L. W. Swann. Metallurgia, v. 62, Dec. 1960, p. 265-268.

Advantages include minimum weight and winding area of finished coils and simplicity of machines for winding. Methods are given for insulating turns by anodizing and for making electrical connections with the foil winding. (W11r; Al, 4-56, 17-57)

28-W. Press Selection for Cold Forging. H. D. Feldman. Metalworking Production, v. 105, Jan. 11, 1961, p. 51-55.

Comparison of load displacement and work diagrams of hydraulic, knuckle joint and crank presses for extrusion, upsetting, necking and other similar operations. (W22p)

29-W. What Vacuum Furnaces Can Do for You. Steel, v. 148, Feb. 6, 1961, p. 70-73.

Comparison of arc, electron beam, resistance and induction vacuum furnaces for heating, melting and refining operations on steel, Al, Cu, Ni and other alloys. (W18, D8m, C25, 1-52; Al, Cu, Ni)

30-W. Developments at Alcan's Rogerstone Plant. Metallurgia, v. 62, Nov. 1960, p. 201-206.

Description of an expansion program, the main feature of which is the installation of a 144 in. hot mill for a plant producing commercially pure Al, Al-Mn and Al-Mg alloys in building and container sheet, foil stock, general sheet and plate. Review of melting, casting, preheating and rolling operations. (W23, F23; Al-b, Mg, Mn, 4-53, 4-56)

31-W. Vacuum Annealing Copper Wire. Metallurgia, v. 62, Nov. 1960, p. 206.

Design of a bell furnace installation which can operate at 550° C. and is heated by coils of Ni-Cr wire supported around the circumference of the chamber and arranged in three zones. (W27, J23, 1-73; Cu, 4-60)

32-W. (German.) Manual Device for Bulging and Stretching Operations. E. Draeger. Industrie-Anzeiger, v. 82, Dec. 20, 1960, p. 1747-1751.

Construction and operation of a manual device for shaping of plain and sectioned steel and Cu alloy sheets by individual stretching and bulging operations. (W24, G14, G17c; Cu-b, ST, 4-53)

33-W. Die Design for Cold Extrusion. Charles H. Wick. Chapter 14 from "Chipless Machining". Industrial Press, New York, 1960, p. 367-406.

Tolerances, specification, material selection, tooling, properties, treatments for dies, die components and extrusion tools. Design of forward and backward extrusion dies and punches taking into account wear allowances, tolerances and properties of die materials and materials to be extruded. (W24n, 17-51, G5)

34-W. Press Selection for Cold Extrusion. Charles H. Wick. Chapter 15 from "Chipless Machining". Industrial Press, New York, 1960, p. 407-434.

Design and comparison of mechanical and hydraulic presses for cold extrusion of steel parts. Effect of material, die design, surface coating and ram speed on extrusion pressure. 15 ref. (W24g, G5; ST)

35-W. New Plant for Rolling Aluminum. C. G. Keil. Aircraft Engineering, v. 32, Nov. 1960, p. 332.

Continuous strip mill employs powerful rolling equipment to produce Al plate. Al alloy is protected from harmful products of combustion by an indirect method of heating in which the air circulating through the furnace passes around banks of radiant tubes which are heated by marine oil fuel. (W23c, F21b, F23; Al)

36-W. Application of Aerodynamic Design to the "U-Fired" Soaking Pit. J. H. Richards, D. K. Griffiths and C. W. Sidwell. Iron & Steel, v. 33, Dec. 19, 1960, p. 634-636.

Design of regenerative soaking pits for combustion of blast furnace gas in which the gases enter and leave the pit chamber at the same side and travel through the chamber in a U-shaped path. Examination of flow pattern of gases as affected by port size, burner design and burner location. (W20g, F21b, 17-51)

37-W. Aerodynamics of OH Furnace Regenerators. C. Holse. Iron & Steel, v. 33, Dec. 19, 1960, p. 636-640.

Examination of flow patterns and velocity distributions to determine preheat temperature distribution in the regenerated air. Cold trial of openhearth furnace regenerators is shown to be as effective as the use of normal working regenerators in measuring the maldistribution of air and gas flows. (W28q, D2h)

38-W. New, Vacuum Arc Furnace Produces Larger Ingots. Steel, v. 148, Feb. 13, 1961, p. 129.

Production of ingots up to 50 in. in diameter and weighing 60,000 lb. in a new, consumable electrode, vacuum arc furnace. (W18s)

39-W. Fluidized Bed Furnaces Offer Speedy Heat Transfer. Steel, v. 148, Feb. 13, 1961, p. 108-110.

Development of furnaces which feature rapid heat transfer and easy adjustability for heating or quenching of ferrous and nonferrous metals. (W27j)

40-W. TsKBMM Mills for New Rolling Processes. A. I. Tselikov. Paper from "Contemporary Problems of Metallurgy". Consultants Bureau, Inc., New York, 1960, p. 392-415.

Design, operation and performance characteristics of multiple roll and planetary rolling mills. Applications

in tube, thread, cylinder spherical bearing and gear rollings; production of beams and structural shapes with varying cross sections and rolling of profiles and different thickness of sheet. Process mechanism and deformation characteristics of carbon steel, stainless steel, Al and Cu workpieces. 26 ref. (W23, F23, F26r, G12)

41-W. (Book.) The Durgapur Steelworks. F. H. Harley, Editor. 188 p. 1960. A Technical Survey published by Iron & Coal Trades Review, John Adam St. Adelphi, London, W. C. Z., England.

Survey of openhearth furnace steelworks at Durgapur, India, including layout and design of coke ovens, iron and steelmaking plants, rolling mills, foundry and power plant. Construction methods. (W10a, 18-67)

42-W. (French.) Refractory Products in Metallurgy. A. Libon. Revue de Metallurgie, v. 57, Nov. 1960, p. 1033-1038.

Applications of silica-alumina, silica, silica plus silica-alumina and Mg refractories in blast furnaces, basic Bessemer, openhearth and electric steel works. Consumption of refractories from France in 1952-1958. (W17, W18; RM-h, 10-54, 17-57)

43-W. Furnaces for High Temperature Carburizing. Pt. 3. W. H. Holcroft. Industrial Heating, v. 28, Jan. 1961, p. 40-44, 46, 48, 50, 52.

Design of batch and continuous furnaces for high temperature carburizing, including rotary, roller hearth, conveyor chain and pusher types. (W27, J28g, 1-66)

44-W. Low Cost Reversing Narrow Strip Rolling Mill. Australasian Manufacturer, v. 45, Jan. 7, 1961, p. 36.

Stainless steel, Ni, Zr, Pt, Be, Cu, rolled Au plate and the bimetals, indium-aluminum and silver-antimony are reduced to thin gages by a two-high, four-high mill. Mill uses work rolls of alloy toolsteel or solid tungsten carbide. (W23c, F23; Au, Be, Cu, Ni, SS, Zr)

45-W. (Czech.) Service Life of Dies Used in the Forging of Grinding Balls. Josef Benes and Antonin Vach. Sbornik, v. 6, Jan. 1960, p. 85-92.

From a steel bar containing 0.65-0.95% C, 0.6-1.8% Mn and 0.2-0.8% Si, grinding mill balls of 30-120 mm. in diameter are forged at 1050° C. initial temperature and finish-forged at 750-780° C. using in both processes dies of low alloyed Cr-Ni steel. Increase of service life by adequate design and choice of a finishing temperature between 1000 and 900° C. 8 ref. (W22a; AY, 17-57)

46-W. U. S. Pipe's Number 5 Blast Furnace. Pig Iron Rough Notes, no. 119, Autumn 1960, p. 2-22.

Design of a new blast furnace plant producing 1000 tons of high grade pig iron per day and having boiler plant steam generators fired by blast furnace gas, coke oven gas or pulverized coal. Air is preheated by three hot blast stoves. (W17g)

47-W. (Japanese.) Construction of the Tobata No. 1 Blast Furnace and Its Blowing-In. Kumao Ueshima, Makoto Inoue and Naoto Nakamura. Tetsu-to-Hagane (Iron and Steel Institute of Japan, Journal), v. 47, Jan. 1961, p. 8-15.

Description of layout, ore-treating system and charging facilities of a large blast furnace installation in operation for one year. Sintering machine has also been installed to improve productivity. (W17g, 17-51)

48-W. Research on Oxide-Coated Cathodes. H. E. Kern. Bell Laboratories Record, v. 38, Dec. 1960, p. 451-456.

Use of Al, C, Mg, Mn, Si, Ti, W and Zr reducing agents with Ni-alloy base to increase life and efficiency of electron tubes. Diagram of planar diode with thermocouple control. (W3h; Ni-b, AD-q, 17-57)

49-W. Asarcon Benefits Cost Performance of Critical Steam Turbine. Asarco Nonferrous Metals Digest, v. 2, Feb. 1961, p. 5-6.

Application of continuous-cast nickel silver bar stock, leaded bronze and other Cu base alloys in steam turbine and other precision machinery parts. (W11k; Cu-b, 17-57)

50-W. Layout and Design of a Modern Hot Strip Mill. M. F. Dowding, C. Sturdy and A. A. Thomas. Paper from "Production of Wide Steel Strip". Iron and Steel Institute, London, England, May 1960, p. 65-75.

Design requirements for a hot strip mill rolling steel slabs weighing 1000 lb. per in. of width. Layouts for slabyards, roughing and finishing trains and runout tables and coilers are suggested for several types of mills. (W23a, 17-51)

51-W. Study of Mold-Iron Compositions. J. R. Kattus. Blast Furnace and Steel Plant, v. 49, Feb. 1961, p. 159-163.

Service life of ingot molds is correlated with a parameter consisting of various thermal and mechanical properties of the ingot mold material. Thermal fatigue parameters are compared for a ferritic ductile iron and various ingot mold irons. 29 ref. (W19c; Fe, 17-57)

52-W. (German.) Influence of Welding Position and Electrode Diameter on Economics of High-Efficiency Electrodes. W. Carl. Oerlikon Schweissmitteilungen, v. 18, no. 39, 1960, p. 9-23.

Test welding of single fillet welds using h and w position and high efficiency Ti and FeTi-type electrodes of varying diameters. Shape and efficiency of weld; economics. (W29h, K1; Fe, Ti, 17-57)

53-W. Steel Fabricator Modernizes Large Scale Job-Shop. Automation, v. 8, Mar. 1961, p. 75-77.

Use of automatic tandem submerged arc welder and tape controlled three spindle drilling machine in the production of bridge structural members from steel beams and columns. (W29, K1e; ST, 4-57)

54-W. Spheroidizing Coiled Wire. John Malis. Production, v. 47, Mar. 1961, p. 70-73.

Description of an automatic, continuous pusher-type atmosphere controlled furnace with six heating zones for the heat treatment of 1018, 1075 and 1060 steel wire. Gas generators and an Autocarb unit are used to maintain the natural gas furnace atmosphere at 55-60 dew point. (W27, 1-52, J-general; ST, 4-61)

55-W. The Contribution of Metallurgy to Electric Power Generation. L. Rotherham. Iron and Steel Institute, Journal, v. 197, Feb. 1961, p. 109-116.

Operation at temperatures up to 950° F. of alternators with cores of carbon steel, Mo carbon steel, Cr-Mo carbon steel and Cr-Mo-V carbon steel and end rings of austenitic steel, austenitic Mn-Cr steel and magnetic Cr-Mo steel. Generation of steam at temperatures up to 1200° F. in boilers of Cr-Mo steel, Mo-V steel, Cr-Mo-V steel and 18-12-1Nb steel. (W11q; ST, 17-57)

56-W. Welding Equipment Employed for Operations on Missile and Satellite Components. Machinery (London), v. 97, Nov. 1960, p. 1061-1064.

Components produced from Al and Mg sheets are welded by stake, spot and boom welders. (W29, K-general, T24e; Al, Mg, 4-53)

57-W. Spray Cooling Inside Standard Bell Furnace. Metalworking Production, v. 105, Feb. 22, 1961, p. 54-56.

Capacity, operation and design of a bell furnace having an internal water spray cooling system for controlled atmosphere annealing. (W27n)

58-W. Corrosion Problems in Industrial Cooling Waters. W. G. Ashbaugh. Paper from "Short Course on Process Industry Corrosion, Proceedings". National Assoc. of Corrosion Engineers, Houston 2, Tex., 1960, p. 235-237.

Corrosion resistance of Al, Cu and Cu alloys, Ni and Ni alloys, stainless steel and other materials which may be used in heat exchangers in fresh or brackish water. (R4a, R4f, W13b; Al, Cu-b, Ni-b, SS, 17-57)

59-W. Electron Unit Slims Refractory Metal Gap. Steel, v. 148, Mar. 20, 1961, p. 1-15.

Design of an electron beam furnace capable of refining and casting ingots of refractory metals up to 8 in. in diameter and 42 in. long. (W18, C-general; EG-d37)

60-W. Unique Furnace Hardens Mill Rolls. J. M. Dugan. Blast Furnace and Steel Plant, v. 49, Mar. 1961, p. 257-258.

Design of a furnace for uniform heating of rolls to controlled depths with a minimum of scale formation. Description of molding, pouring, annealing, machining, hardening and tempering

operations in roll production. (W27, J-general, W23k)

61-W. Two-Chamber Induction Furnaces for the Melting and Holding of Nonferrous Metals. Karl Tiljander. ASEA Journal, v. 34, no. 3, 1961, p. 47-49.

Design and operation of two-chamber mains-frequency furnaces. Application to the simultaneous melting and holding of nonferrous metals such as Al and Al alloys, Zr and brass. Maintenance requirements, melting capacity and power consumption. (W18a, W19a, C5n; Al-b, Cu-n, Zr)

62-W. (German.) Drawing Force and Drive Power in Multiple Wire Drawing. A. F. Mohrnheim and F. Liehmeier. Draht, v. 12, Feb. 1961, p. 45-50.

Computation of drawing force, die diameter and drawing speed for steels containing 0.1-1% carbon in drawing at constant cross section reduction ratio and at constant drive power. (W28; ST)

63-W. Acme Steel Puts New Hot Strip Mill Into Operation. Iron and Steel Engineer, v. 38, Mar. 1961, p. 161.

Design and operation of a semi-continuous hot strip mill which converts steel slabs into coils with improved surface as a result of greater descaling water pressure available on the mill. (W23c, F23; ST)

64-W. (German.) Modern Hardening Salt-Bath Furnaces With Four Electrodes and Increased Useful Resistance. E. Zmihorski. Harterei-Technische Mitteilungen, v. 15, Apr. 1961, p. 223-227.

Operation and design of a salt-bath furnace for hardening of unusually long steel parts (bath temperatures 600-1350° C.) Heating with two regular and two auxiliary electrodes. Thermal efficiency. (W27m)

65-W. Refractories Hold Key to Nuclear Turbogenerators. M. A. Zipkin and R. B. Brooks. Space Aeronautics, v. 34, Dec. 1960, p. 44-48.

Application of alloys with high-strength low-weight ration, stress resistance and high-temperature stability as construction materials of turbogenerators used for communication and propulsion in space craft with alkaline liquid metals as the working fluid. Comparison of properties of 1ZrCb, 0.5 ZrMo, Hastelloy X, Inconel, A110AT, F48, 316 stainless and 347 stainless alloys. (W11p; Q-general, SGA-h, EG-d37, Mo-b, Cb-b, Ni-b, SS, 17-57)

66-W. Developments in the Melting of Metals for Foundries. British Foundryman, v. 54, Mar. 1961, p. 103-130.

A conference paper covering the character and performance of melting furnaces such as cupolas, air furnaces, pulverized-fuel and oil-fired furnaces, etc., used in production of iron castings, melting furnaces such as arc furnaces, mains frequency furnaces, etc., used for steel castings and melting furnaces for nonferrous melting such as fuel-fired and electric furnaces. 53 ref. (W18)

67-W. (French.) Electric Furnace With Rocking Melting in Rotating Vat for Refining Special Ferrous Alloys. Journal du Four Electrique, Jan. 1961, p. 11-12.

Design, operation and advantages of this furnace type. (W18s)

68-W. Giant Electron Beam Furnace Casts 20-In. Ingots. Western Metalworking, v. 19, Apr. 1961, p. 38-39.

A new Megawatt capacity furnace for commercial scale electron beam melting and vacuum casting of refractory metals, superalloys and special steels with close composition control. (W18, C5, 1-53; SGA-h, EG-d37)

69-W. (Italian.) Filler Rods for Gas Welding of Spheroid Castings. Fonderia, v. 10, Feb. 1961, p. 71-74.

Composition and mechanical properties of Fe filler rods. Impact resistance, flame treatment and microstructure of repaired spheroid castings. (W29h, K2, 18-72; CI)

70-W. Present Trends in Direct Arc Electric Furnace Applications. Pt. 2. Industrial Heating, v. 28, Apr. 1961, p. 728-732.

Report on improvement of power input and control of electric arc furnaces in conjunction with electrode regulation and as related to energy levels and arc resistance. (W17j)

71-W. New Steel Treating Facility of North American Aviation. Christy Lambesis. Industrial Heating, v. 28, Mar. 1961, p. 447-450, 452, 454.

Specialized processing of heat resistant stainless steels is achieved in a flexible installation consisting of a gantry-type hardening furnace, pit-type draw furnace, pit-type subzero coal chamber, two subsurface tanks for water and atmospheric quenching, 14 tanks for chemical cleaning and rinsing, vapor degreaser, drying oven for cleaning metal parts, sand blast machine, metal spray booth and elaborate fluorescent die penetrant inspection installation. (W27, 1-53, J-general; SS)

72-W. Hot Presses Used for Shaping and Forming Exotic Alloys. Industrial Heating, v. 28, Mar. 1961, p. 474, 476, 478, 480.

Blanks of Be, Mo, Ti and other aircraft materials are formed by two or more presses as one large tool by mechanically, hydraulically and electrically interlocking their shuttle tables and mean rams for simultaneous control from a single station. Other aircraft parts are hot formed with a roto forge spinning machine. (W24g, G-general; Be, Mo, Ti)

73-W. Largest Vacuum Electron Beam Melting Furnace Will Produce 20" Ingots of High Temperature Metals and Alloys. Industrial Heating, v. 28, Mar. 1961, p. 484, 486, 488.

Scrap, bulk powder or chips of steel, Ti, Zr, Cb, Mo, Ta and Ni alloys may be melted and cast in 6 ft. ingots 20 in. across in a furnace three stories high and weighing about 25 tons. (W18, C25; Cb, Mo, Ni-b, ST, Ta, Ti, Zr)

74-W. New Furnace Heat Treats Stainless Steel for the B-70's. Christy Lambesis. Metal Treating, v. 12, Apr-May 1961, p. 15, 32.

Heat resistant stainless steels are treated in a gantry furnace capable of heating a maximum load of 10,000 lb. to 2050° F. within ± 10° F. (W27j, J-general; SS, SGA-h)

75-W. New Electrode Is Efficient in Every Position. Welding Fabrication and Design, v. 4, Mar. 1961, p. 19-20.

Electrode for touch or short arc welding permits control of slag and weld metal in all positions. Control of the arc is sustained for the length of the electrode. (W29h)

76-W. Oil Fired Furnaces. J. A. Taylor. Metal Industry, v. 98, Mar. 17, 1961, p. 203-206.

Application of oil fuel in furnaces and soaking pits for high and low-temperature processes in the nonferrous metal industry such as Al and bronze melting, heating of Cu billets and heat treatment of Al alloys. (W20g, W27h)

77-W. Mild Steel Electrodes for Contact Welding. J. W. Addie. British Welding Journal, v. 8, Apr. 1961, p. 135-140.

Report on design, properties and applications of mild steel electrodes for contact welding including comparison with noncontact processes with respect to electrode and welding cost. (W29h; CN, 17-57)

78-W. Automatic Arc Welding Equipment. C. W. J. Vernon. Welding and Metal Fabrication, v. 29, Apr. 1961, p. 141-148.

A review of arc welding equipment and techniques for continuous covered electrode, submerged-arc and semi-automatic submerged-arc welding process. (W29, K1)

79-W. (German.) Metallurgy of Arc Welding Electrodes. P. E. Wimmer. Schweissen und Schneiden, v. 13, Apr. 1961, p. 140-146.

Metallurgical reactions in welding with basic, heat resistant and high-alloyed electrodes are discussed in terms of reduction, oxidation, gas absorption (hydrogen, oxygen, nitrogen) and mutual reactions between basic and acid slag and metal, solid state precipitations, precipitation hardening and strain hardening. Sulphur sensitivity of electrodes; mechanical properties. Trends in electrode development. (W29h)

80-W. (Russian.) Investigation of the Working Space of a Ferrosilicon Furnace. I. T. Zherdev, V. N. Davatts and I. I. Polyakov. Izvestiya Vuz--Chernaya Metallurgiya, Sept. 1960, p. 173-181.

Graphite and steel probes are used to determine contours of ferrosilicon electric furnace cavity with Ammeter and voltmeter measurements of bath to electrode distance. (W17j, D5, 1-54, 17-52)

81-W. (Slovak.) New Filler Materials Used in CSR. Stefan Horvath. Zvaracsky Sbornik, v. 10, Jan. 1961, p. 65-88.

Yield strength, tensile strength, elongation and notch impact strength of

filler metals obtained from electrodes used in the welding of alloy steels and heat resistant steels. Effect of heat treatment for 2 hr. at 400-1000° C. on the hardness. Microstructure of filler metal. Composition and application of various fluxes for submerged arc welding. Survey on soldering and brazing solders. Composition of a wire used in gas welding. 13 ref. (W29h, K-general; AY, SS, SGA-h)

82-W. (Slovak.) Development of an Electrode for Hard Surfacing Operations in Metallurgical Plants. Ladislav Lakatos. Zvaracsky Sbornik, v. 10, Jan. 1961, p. 109-148.

Composition and characteristics of welding wires and composite electrodes used in hard surfacing by the submerged arc process. Coefficients for the transition of C, Mo, W, Cr, V and Mn varying with the concentration of these elements in the filler metal. Shape of beads produced with the composite electrode VUS-PW1 as a function of current density and welding parameters. 11 ref. (W29h, L24)

83-W. High Temperature Alloys for Small Gas-Turbine Application. M. Kaufman. American Society of Mechanical Engineers, Paper no. 61-AV-44, 1961, 9 p.

Review of alloys now available for use in components operating at 1500° F. and over; basic metallurgical structure; their limitations and possible future course of development. 16 ref. (W11m; SGA-h, 17-57)

84-W. Power-Driven Brushes. E. P. Fisher. American Machinist/Metalworking Manufacturing, v. 105, May 15, 1961, p. 149-156.

Guide to power-driven brushes utilization and design. Review of operation variables, metallic and nonmetallic fill materials and construction application in finishing operations on Al, steel, Cu and brass. (W2b, L10; Al, ST, Cu-b)

85-W. Heat Exchanger Design Variables. Arthur J. Makris. Alcoa Review, v. 10, Spring 1961, p. 6-9.

Survey of mechanical and process variables which influence production costs of steel heat exchangers such as construction type, tube length and pitch, pressure drop, fluid selection, temperature approach, MTD and mass, fouling factors and design pressure. (W13b, 17-51; ST, 17-57)

86-W. The Brinsworth Cold-Strip Mill. Sheet Metal Industries, v. 38, May 1961, p. 359-366.

Production of mild steel strip coil in a tandem cold rolling mill with ancillary equipment consisting of a hot strip mill, pickling bath, shearing and trimming lines and skin-pass mill. (W23c, F23; CN)

87-W. Using H-13 Steel in Diecasting Dies. Arthur E. Scholz. Foundry, v. 89, June 1961, p. 76-79.

Properties and application of AISI H-13 hot work toolsteel utilized for Al, Mg and long-run Zn die casting dies, including internal defects, machinability, polishing characteristics, strength, toughness, weldability and erosion and heat checking resistance and heat treatability. (W19n, Q-general; TS-m, 17-57)

88-W. European Experience With the Electrically Heated Soaking Pit. H. C. Bjerke. Iron and Steel Engineer, v. 38, Apr. 1961, p. 92-98.

Various types of soaking pit are described in terms of ingot size and ingot capacity, heating and temperature uniformity and atmosphere and oxidation control. Applications in preheating high-carbon alloy and stainless steel ingots for forging and rolling operations. (W20g, F21b; ST, 4-52)

89-W. Aluminium in Heat Exchange Equipment. Light Metals, v. 24, May 1961, p. 124-126.

Corrosion resistance and high thermal conductivity and specific heat of Al favor its application in the fabrication of heat exchange equipment including fan blades and refrigerator parts. (W13b; Al, 17-57)

90-W. Steel Rolls Used for Hot Strip Mill Table. Iron and Steel Engineer, v. 38, May 1961, p. 164.

Production and operation of carbonitrided steel rolls which give service comparable to cast iron rolls in mill runout tables. Wear, warpage and oxide pickup are discussed as causes of failure. (W23p; ST, 17-57)

91-W. New Control System Developed for Consumable Electrode Vacuum Arc

Melting Furnace. Industrial Heating, v. 28, May 1961, p. 949.

Hydraulic system for electrode motion and arc voltage control used in Ti, Cb, W and Mo melting operations. Voltage sensitivity can be maintained at ± 1/4 volt and total time delay for activation of the electrode shaft is not more than 3 milliseconds. (W18s, C5h, 1-73; Ti, Cb, W, Mo)

92-W. Welding by Plasma Torch. Metalworking Production, v. 105, May 24, 1961, p. 73.

Plasma arc torch and its application in welding and surfacing. (W29d, K6)

93-W. Automatic Vacuum Furnace Lops Off 75% in Braze Time. Western Metalworking, v. 19, May 1961, p. 44.

Automatic vacuum furnace designed for high volume precision work at temperatures to 2250° F. reduces production time during brazing and heat treating of refractory and nuclear equipment metals. (W29m, 17-51)

94-W. Forgings Cost 10-20% Less as a Result of a New Automatic Forging Press. Materials in Design Engineering, v. 53, June 1961, p. 15, 165.

Automatic forging press which handles the entire forging process from billet heating to trimming and hot coining without any manual handling operation. (W22p)

95-W. New Torch Solves Welding Problems. Light Metal Age, v. 19, Feb. 1961, p. 24.

Controlled angle torch permits continuous flexibility of the head, complete controlled angle positioning and longitudinal movement. It can be quickly set and extended to reach recessed areas. Application to the welding of an Al housing. (W29d, K-general; Al)

96-W. Sendzimir Mills Tuned Up to Roll Thin Tin Plate. Steel, v. 148, June 19, 1961, p. 96, 99.

Thin Sn plate with high surface quality and close gage tolerances is produced on a Sendzimir mill, using tungsten carbide work rolls and bearings. (W23b)

97-W. (Spanish.) Testing of Electrodes for Welding of High-Strength Mild and Low-Alloy Steel. Ciencia y Tecnica de la Soldadura, v. 10, Nov-Dec. 1960, p. 3-323, 1-10.

Testing of the quality of the base metal and of the position of electrodes, sheets and tubes to be welded. Heat treatment of welded seam. Necking and notch tests on weldments. (W29h, J-general, Q27g, Q27d; CN, AY, 7-51)

98-W. Electric Furnaces in Iron Foundries. R. Genwo. Demag News, no. 159, 1961, p. 28-34.

Description, operation and application of electric arc and crucible type induction furnaces. (W18a, W18s, 1-53)

99-W. "Walking Beam" Furnace Continuously Heat Treats Wide Range of Missile and Aircraft Steel Forgings. John P. Molony. Industrial Heating, v. 28, June 1961, p. 1084-1088, 1102.

A 50 ft. long furnace is equipped with two parallel walking beams to carry the work through four distinct direct gas-fired zones of control. The furnace is capable of heat treating approximately 10,000-lb. of work per hr., depending on the weight and geometry of the particular steel being treated. (W27, J-general, T24; ST, 4-51)

100-W. Electric Furnace With Shroud Assembly Used to Solution Heat Treat Aluminum Torpedo Shells. B. Wirth and R. W. Coolbaugh. Industrial Heating, v. 28, June 1961, p. 1092-1094, 1096, 1102.

Transfer of shells from the furnace to a quench tank without the use of a drop-bottom furnace is accomplished by a shroud which limits heat loss and an air hoist. (W27j, J-general; Al)

101-W. Variety of Nickel-Alloyed Materials Used in B & W Coal Pulverizers. Inco Nickel Topics, v. 14, Apr. 1961, p. 2-3.

Use of heat treated cast or wrought Ni alloys in shafts, gears, springs, grinding rings and balls in coal pulverizers. (W15n; Ni-b, 4, 5, 17-57)

102-W. Specify Stainless for Steel Mill Sintering Screens. Inco Nickel Topics, v. 14, Apr. 1961, p. 10.

Vibrating feeder screens made of stainless steel alloy containing Cr, Ni and Mo are abrasion, creep, fatigue and corrosion resistant at very high temperatures (1400-1500° F.) (W15p, Q-general, R-general; SS, 17-57, SGA-h)

103-W. (Russian.) Strength of Rolling Mill Universal Shafts During Changing Loads. V. M. Grebenik and F. K. Ivanchenko. Izvestiya VUZ--Chernaya Metallurgiya, Feb. 1961, p. 164-171.

Method of calculating stresses, strains and maximum permissible loading of rolling mill shafts to avoid breakage before expected lifetime (6 yr.) Recommendation of 40X steel with a safety factor of 1.7 in place of ordinary carbon steel with a safety factor of 1.0. 9 ref. (W23p, Q25; AY, 17-57)

104-W. Switch in Tool Steel Solves Breakage Problem. Western Metalworking, v. 19, June 1961, p. 48.

Use of AISI Type L6 matched tool and die steel in place of Type D-2 high-carbon/high-chromium toolsteel as a punch material. Breakage is eliminated in fabricating powdered metal for gear sections, internal splines and other precision parts. (W24p, G2j; TS, 17-57, 6)

105-W. Investigation of Filler Materials for Welding Al-Zn-Mg Alloys. P. T. Houldcraft. British Welding Journal, v. 8, July 1961, p. 360-365.

Report of work carried out to develop a filler material for welding high-strength DTD 683 alloy containing 6% Zn and 2.75% Mg. Tests are conducted on filler alloys containing Zn and Mg in various proportions to determine resistance to cracking. Effect of Si additions. 11 ref. (W29h, K-general; Al-b, Zn, Mg)

106-W. Plating Anodes. Pt. 2. D. J. Fishlock. Electroplating (India), v. 3, Jan-Mar. 1961, p. 14-23.

Applications and advantages of inert, contoured, auxiliary and bipolar anodes. Recommendations of anode shape and type for Cr, Ni, Sn, Ag and Rh plating processes. 9 ref. (W3h; Cr, Ni, Sn, Ag, Rh, 17-57)

107-W. Platinum-Lined Furnaces for Plutonium Production. Platinum Metals Review, v. 5, July 1961, p. 92.

Parts of high temperature electric muffle furnaces are lined with Pt to prevent contamination by HF gas in the extraction of Pu from irradiated U. (W27p, R6g; Pt, 17-57)

108-W. (German.) Influence of Manganese Content on Lifetime of Steel Mill Molds. Karl-Ludwig Kiesel. Neue Hutte, v. 6, May 1961, p. 284-291.

Statistical analysis of lifetime as influenced by Mn content of 2.5-ton ingot and 2.4-ton slab molds of cast iron. Critical Mn content as influenced by C and Si. (W19c, 2-60, 17-52; CI, Mn, 17-57)

109-W. Jig Design for Precision Furnace Brazing. Alexander M. Hanfmann. American Machinist/Metalworking Manufacturing, v. 105, July 10, 1961, p. 97-104.

Use of self-jigging parts or precision brazing jigs to hold parts in precise alignment through the furnace during brazing. Principles of the process are outlined. Dimensions and tolerances for brazing jigs, distribution of tolerance, expansion calculations, prevention of sticking, reduction of friction, jig warpage and criteria for choice of jig materials. (W25b, K8j)

110-W. Abrasive Belts Speed Finishing. John H. Miller. Industrial Finishing (London), v. 13, June 1961, p. 27, 29-30.

Structure and composition of abrasive belts relative to various finishing processes. Abrasive belt grinding and polishing techniques and equipment. (W25c, G18k, L10b, 1-52)

111-W. Low-Hydrogen Electrodes Make Sound Welds in Pressure Piping. Welding Design & Fabrication, v. 34, July 1961, p. 29.

Designing of welded joints, selection of proper welding electrodes and fixing preheat and stress relieving temperatures for thick-walled pipeline used to transport steam from boiler to turbine in an electric power plant. Radiographic and magnetic particle inspection of joints. (W29h, K9p, S13, T26r; 7-51, 17-51)

112-W. (French.) Performance of Quenching Oils. L. Mazet, M. Vauzelle and M. Pothier. Revue de Metallurgie, v. 58, May 1961, p. 417-428.

Study of resistance to thermal deterioration; methods of measuring oxidation; carbon analysis of the oils; influence of oxidation inhibitors; determination of quenching power. The quenching power of paraffinic oils decreases rapidly in use, whereas for naphthenic oils it remains constant or tends to increase. 24 ref. (W28p)

113-W. Annealing Brass Strip. Metal Treatment and Drop Forging, v. 28, July 1961, p. 288.

Electric batch furnaces used for annealing brass strip at 500-600° C. Design and construction details of the furnaces. (W27j, J23; Cu-n, 4-53)

114-W. Induction Unit Cuts Heating Time. Steel, v. 149, July 31, 1961, p. 74-75.

Carbon and alloy steel crankshafts for locomotive or marine diesel engines are heated in 60 cycle equipment to 2200° F. in 22 min. Scale formation is reduced by rapid heating. (W27k, J2g, T7; CN, AY, 9-52)

115-W. Pressing Aluminium. J. W. Lengbridge. Metal Industry, v. 99, July 14, 1961, p. 26-30.

Importance of tool and die design and construction with emphasis on the draw radii of the tool. Examples of pressing tools for circular shells. (W24, 17-51, G1; Al)

116-W. Reactive Metals Start to Roll. Iron Age, v. 188, Aug. 10, 1961, p. 71.

Installation of a 300 kw. electron beam melting furnace and development of a new Cb alloy, Cb-752, permits increased production of rod, bar, wire and plate forms of Cb-base alloys. (W18, C5k; Cb-b, 4-53, 4-55, 4-61)

117-W. Electron Beam Furnace Ups Refractory Metal Capacity. Steel, v. 149, Aug. 7, 1961, p. 71.

Installation of an electron beam furnace and development of an 89% Cb, 10% W, 1% Zr alloy (CB-752) for the production of Cb and V alloys in rod, bar, wire, sheet or plate form. (W18, C5k; Cb-b, V-b, 4-53, 4-55, 4-61)

118-W. Developments in Welding Techniques. Australian Mechanical Engineering, v. 48, July 5, 1961, p. 38-40.

Automatic electric welding of cast iron and stainless steel including advances in the design of gas shielded electrodes and innovations in stud welding. (K1f, W29h; CI, SS)

119-W. Automatic Harden, Quench and Draw Line Automates Heat Treating at Colorado Fuel and Iron Corporation. Fred F. Bach and John Jones. Sunbeam Metal Minutes, v. 20, no. 2, 3 p.

Description and operation of a 100 ft. conveyorized line for heat treating forged steel grinding balls. The continuous gas-fired equipment includes a 43 ft. conveyor type hardening furnace, a 16 ft. conveyor water quench tank, a 48 ft. conveyor draw furnace, safety equipment and an enclosed control panel. (W27g, W28, J-general; ST, 4-51)

120-W. (Translation-Brutcher no. 4999.) Modernizing the OKB-704 Vacuum Furnace for the Annealing of Special Steels in a Magnetic Field. M. N. Solov'ev and I. Z. Naumov. Metallovedenie i Termicheskaya Obrabotka Metallov, Nov. 1959, p. 51-53.

Previously abstracted. See item 36-W, 1960. (W27, J2, 2-64; AY)

121-W. Low Melting Alloys for Pattern Shop Use. O. J. Seeds. Modern Castings, v. 40, Aug. 1961, p. 65-72.

Use of Bi alloys containing Pb, Sn and Cd in fabrication of duplicate patterns for matchplate construction to coat wood patterns to increase wear resistance and prevent warpage, to construct metal shell patterns for core boxes and dryers and to make metal-faced plastic-reinforced molds for plastic patterns. (W19j, W19g; Bi-b, 17-57)

122-W. Report on First 750-Ton Presses by Australian Producer. H. Grafton. Australian Machinery and Production Engineering, v. 14, July 1961, p. 33-35.

Design, control and operation of a mechanical press used to produce wheel centers for truck and bus wheels from mild steel blanks. Blanking, dishing and piercing operations. (W24g, G-general, T21; CN)

123-W. Pinch Trimming and Swaging Dies for Covers. J. M. Goldstein. Machinery (London), v. 99, Aug. 1961, p. 305-306.

Tool design for forming, cutting and finishing kitchenware covers from mild steel and brass sheet. (W24n, G-general, T6n, T10a; CN, Cu-n, 4-53)

124-W. Manufacture of Industrial Heating Equipment at Sunbeam Plant. Industrial Heating, v. 28, Aug. 1961, p. 1489-1492, 1496, 1498, 1502, 1584.

Plant equipment and processes for the production of heat treating furnaces, protective atmosphere generators, power and control panels and quenching equipment. (W27, W28, 1-52)

125-W. Stamping Plant Keeps Up-To-Date With Modern Shearing Line. Metal Products Manufacturing, v. 18, Sept. 1961, p. 27-29.

Processing of cold rolled or stainless steel coils weighing up to 15,000 lb., in 40 and 48 in. widths, by a coil shearing line which can be run at speeds up to 190 ppm. under automatic control. (W24m, 1-52, 4-53, 18-74; ST)

126-W. Electric Furnace Bottoms and Their Maintenance. Erwin Franzen. American Institute of Mining, Metallurgical and Petroleum Engineers, Preprint, Nov. 30-Dec. 2, 1960, 7 p.

Parameters of design and maintenance for electric furnace bottoms. Optimum characteristics include a wide, shallow flat, steep lower bank sections and thick upper bank sections. (W17j, D5, 1-52, 17-51, 18-71)

127-W. Flux and Filler-Wire Developments for Submerged-Arc Welding Hy-80 Steel. W. J. Lewis, G. E. Faulkner and P. J. Rieppel. Welding Journal, v. 40, Aug. 1961, p. 337s-345s.

Development of a flux which improves weld metal impact properties while lowering oxygen and inclusion contents and a filler wire which produces weld metal with notch toughness of over 40 ft-lb. at -80° F. in both as-welded and stress-relieved states. 4 ref. (W29h, K1e; AY, RM-q)

128-W. (Japanese.) Measurement of Erosion of Blast Furnace Linings Using Radioactive Isotopes. Satoshi Hayashi, Gyoichi Suzuki, Tadashi Kobayshi, Hiroshi Iizima and Tetuo Yamaguchi. Tetsu-To-Hagane (Iron and Steel Institute of Japan, Journal), v. 47, Aug. 1961, p. 1143-1147.

Radiation originating from Co^{60} embedded in the bosh, hearth and shaft bricks is used to determine quantity of residual pig iron and refractory erosion during a six-month smelting period. Erosion is dependent largely on length of operation and furnace gas distribution. (Q29g, Q9, 1-59; RM-h, 17-57)

129-W. (Japanese.) Trial Manufacture of a Vacuum Arc-Melting Furnace for Laboratories. Pt. 1. Study of Vacuum and Inert-Arc Melting. Shuzo Takeda, Naoki Nagai, Natsuo Yukawa and Fumio Hori. Tetsu-To-Hagane (Iron and Steel Institute of Japan, Journal, v. 47, Aug. 1961, p. 1148-1155.

Design and operation of an arc furnace using nonconsumable and consumable electrodes for melting in vacuum and inert gas atmospheres. Applications to refractory and high temperature metals including Ti, Mo, Cr and 18-8 stainless steels. Effect of process variable on ingot soundness, composition and gas content. 30 ref. (W18s, C5h, D6, 1-73; SS, SGA-h, Ti, Mo, Cr, EG-d37)

130-W. (German.) Electrometallurgy of Sinter Materials. P. Koenig. Elektrothermie, 1960, p. 132-139.

Use of electric energy in production of metal and nonmetal powder and in sintering and soaking is discussed with emphasis on design and use of continuous and batch type electric furnaces, their temperature ranges and power consumption (W26e, H10b, H15, 1-52, 16-61, 17-51)

131-W. Mammoth Box Girder Supports Crane Runways. Welding Engineer, v. 46, Sept. 1961, p. 74.

Automatic-submerged-arc welding and positioning are used in fabricating a 96-ton, 102-ft. long steel girder. (W12q, K1e, 1-52, 17-57)

132-W. Is Your Heat Processing Out of Date? Steel, v. 149, Sept. 25, 1961, p. 142-148.

Survey of industrial furnaces and heating equipment in terms of the requirements for newly developed metalworking processes. Induction or dielectric, electric fuel-fired furnaces are evaluated for use with various metals in various processes. (W18, W19, 1-52, 17-52)

133-W. (German-French.) Tungsten Electrodes for Tig Welding. Gustav Purt. Schweisstechnik Soudure, v. 51, Aug. 1961, p. 274-279.

Production of electrodes by pressing and sintering of thoriated and zirconated WO_3 powder under hydrogen at 1100° C. and subsequent drawing or hammering at 1600-1200° C. Physical properties such as density and resistivity are evaluated in terms of welding applications. (W29h, H-general, P10a, P15g, 1-52, 17-57; W)

134-W. (French.) Automatic Heat Treatment Equipment. Trempe, no. 37, May 1960, p. 5-12.

Furnaces and conveying equipment used in the quench hardening, case hardening and isothermal heat treatment, in fused baths, of small, medium and heavy parts. (W27, J-general)

135-W. The Mill of the Future--The 80-Inch Hot Strip Mill. Stephen T. Kraft. Paper from "Regional Technical Meetings, 1960". American Iron and Steel Institute, New York 17, 1961, p. 333-342.

Hot rolling of coiled steel strip on a continuous mill at 84 sec. intervals. Design of mill and auxiliary five-zone heat treatment furnaces. (W23c, F23, 1-66, 17-51; ST, 4-53)

136-W. Study of Mold-Iron Compositions. J. R. Kattus. Paper from "Regional Technical Meetings, 1960". American Iron and Steel Institute, New York 17, 1961, p. 463-498.

Performance of gray and Mg-treated irons in ingot mold service and laboratory thermal fatigue tests. A parameter is derived from various material properties for predicting performance in any thermal-fatigue application. 29 ref. (W19c, 17-57, Q7j, 2-60; CI-n, 17-52)

137-W. New Vacuum Arc Remelting Furnace Installation at Standard Steel Works. Industrial Heating, v. 28, Sept. 1961, p. 1724, 1729.

Furnace can produce ingots in diameters of 16-30 in. ranging in weight from 6000-20,000 lb. Materials can be produced exhibiting all of the advantages of vacuum melting--principally superior cleanliness with decreased shrinkage and segregation. (W18s, D5, D8, 1-52, 1-73; ST)

138-W. Vacuum-Casting Installations at River Don Works, Sheffield. Metal Treatment and Drop Forging, v. 28, Aug. 1961, p. 326.

Design and application of an electric arc-melting furnace having a shell diameter of 21 ft. and an electrical rating of 20 mva. for producing alloy steels for casting in vacuum. (W18s, C5h, 1-52; ST)

139-W. (German.) New Heat Exchanger of Aluminum. L. Forgo. Allgemeine Warmetechnik, v. 10, Aug. 1961, p. 149-156.

Design and construction details for heat exchanger of pure (99.5%) Al for condensation power plant. Thermal conductivity and corrosion resistance are evaluated and parameters given for computation of necessary materials requirements. (W11g, P11h, R-general, 17-51, 17-57; Al, ST, Cu)

140-W. Electroplate-Bonded Diamond Wheel. Metalworking Production, v. 105, Sept. 20, 1961, p. 57-59.

Carbide, ceramic, ferrite and hardened steel are ground with wheels made by coating a mild steel base with a layer of diamond particles in an electrolytically deposited matrix. (W25c, G18, K11, L17; CN, NM-k37)

141-W. (German.) Influence of Material and Internal Stresses on Lifetime of Steel Plant Molds. Waldemar Gerkan. Stahl und Eisen, v. 81, Aug. 31, 1961, p. 1192-1203.

Mechanical testing, measurement of thermal conductivity and internal stresses and microstructure investigation of square cast iron molds (3.4-3.75% C, 1.3-1.9% Si, 0.48-0.84% Mn, 0.10-0.12% P, 0.072-0.24% S) for 1-1.7-ton basic Bessemer steel ingots. Molding and casting technology for production of molds. Lifetime as influenced by composition, microstructure and internal stresses of molds. (W19c, D9k, P11, Q-general, 2-60, 3-66, 3-71; CI)

142-W. Recent Blast Furnace Rebuilds at Kaiser Steel Corporation. J. H. Owen. Blast Furnace and Steel Plant, v. 49, Oct. 1961, p. 985-991.

Retailed schedule of operations from blowing out furnace to filling and blowing in, covering a 40-day period. Work includes major repair work and modification of basic furnace lines and associated equipment with installation of a moisture injection system. (W17g, 18-72)

143-W. (Rumanian.) Improvement of Cupola Operation. Al. C. Vissarion. Buletinul Institutului Politehnic Bucuresti, v. 22, July-Sept. 1960, p. 111-128.

Research carried out with three cupola furnaces of 380 and 500 mm. ID showing different arrangements of the tuyeres. Effect of blast air preheating and tuyere arrangement on air and coke consumptions, melt temperature and waste gas composition. 13 ref. (W18d, 10-52)

144-W. Co-Operation Improves Steel Casting Design. British Steelmaker, v. 27, Oct. 1961, p. 325.

Branched ends of an intercept steam chest casting of Mo-V high-temperature steel are tapered to assist directional solidification. The intercept castings are for application in a turbine generator installation. (W11k, E13, 17-51, 17-57; SGA-h, ST, Mo, V)

145-W. The Aerodynamics of Gases in Continuous Furnaces. M. M. Korotaev. Iron and Steel Institute, Journal, v. 199, Sept. 1961, p. 15-18.

Euler's theorem is applied to calculating the dynamics of gas flow in a furnace fired with a preheated gas-air mixture. Calculations are made to determine the effect of roof configuration on pressure distribution along the furnace length. (W20h, F21b)

146-W. Bar and Strip Mill Loopers. W. E. Kollek. Iron and Steel Engineer, v. 38, Oct. 1961, p. 125-132.

Looper operation to control interstand tension on the rolling operation limiting undesirable cross-section reductions. Diagrams and descriptions of subassemblies such as pressure and hydraulic systems and electrical controls. (W23d, 1-52)

147-W. Evaluation of Checker Design. F. D. Nelson. Iron and Steel Engineer, v. 38, Oct. 1961, p. 133-142.

Use of double-pass checker chambers of sufficient volume permits higher combustion air preheat with a subsequent flame temperature increase and a fuel consumption decrease. Comparison with single-pass chambers in terms of efficiency and costs. (W17g, 17-51)

148-W. Limitations of Blast Furnace Stoves. T. R. Schuerger. Iron and Steel Engineer, v. 38, Oct. 1961, p. 143-151.

Stoves are analyzed in terms of operating temperatures. Heat-transfer coefficients, heat-storage data and thermal efficiency are evaluated in terms of heating rates and stack temperatures. Research to determine a compatible analog for the blast furnace stove to be programmed for digital computation. 21 ref. (W17g, 10-52)

149-W. (Italian.) A New Nickel-Chromium Alloy for Solving the Problem of Fuel Oil Ash Corrosion. Il Nickel, no. 93, Aug. 1961, p. 1-6.

Crude processing of fuel oil to raise the fusion point of ashes and to remove V, S and Na corrosive agents. Coating processes, with subsequent corrosion testing, for Cr-Ni and Ni-Cr alloys and steels, Inconel X and Corronel 230 used as industrial heating equipment. (W10e, R7d; SGA-h, SGA-g, Ni-b, Cr-b, SS, 17-57)

INSTRUMENTATION

Laboratory and Control Equipment

1-X. (Italian.) Pyrometry in Italian Steel Mills. Metallurgia Italiana, v. 52, Aug. 1960, p. 205-207.

Description of a satisfactory immersion thermocouple and its use and care. Interpretation of readings. (X9q, S16, D-general)

2-X. (Translation-ConBur.) New Alloys for High Temperature Thermocouples. A. A. Rudnitskii and I. I. Tyurin. Russian Journal of Inorganic Chemistry, v. 5, Feb. 1960, p. 192-196.

Calibration curves and electrical resistivity of thermocouples composed of pure Ir and Rh, binary Pt-Rh and Ir-Rh alloys and ternary alloys of Pt and Rh with Ru, Ir or Pd. 12 ref. (X9q, P15g; Ir-b, Rh-b, Pt-b, 17-57)

3-X. Resistance Apparatus for the Continuous Measurement of Fine Wire Uniformity. A. I. Michaels, T. L. Weaver and R. C. Nelson. Metallurgical Society of AIME, Transactions, v. 218, Dec. 1960, p. 1070-1076.

Design and operation of an apparatus for making continuous nondestructive resistance measurements throughout a spool of fine wire. Highly reproducible results on clean and graphite coated tungsten and molybdenum wires indicating a correlation between tensile strength, hardness and resistivity. (X25, P15g; Mo, W, 4-61)

4-X. (French.) Contribution to the Micrographic Study of Structural Transformations in Solids. Andre Kerleroux. Comptes Rendus, v. 251, Nov. 14, 1960, p. 2169-2170.

Microscopic hot stage which permits heating to 1500° C. and direct observation of specimens under vacuum of specimens. Application to study of martensitic reaction in an Al bronze and corrosion in an Al brass. (X3p, M-general, N6q; Cu-b, Al)

5-X. Further Experiences With Aluminum Wire Seals for Bakeable Vacuum Systems. L. Elsworth, L. Holland and L. Lawrenson. Journal of Scientific Instruments, v. 37, Dec. 1960, p. 449-451.

Al wire is clamped between machined stainless steel flanges and baked at 300° C. to form air tight seals. Joint strength is directly proportional to baking temperature. (X13e; Al, 17-57)

6-X (German.) Temperature Measurement With Platinum-Metal Thermocouples. J. Sagoschen. Metall, v. 15, Jan. 1961, p. 34-40.

Pt-PtRh thermocouples of varying composition for temperature measurements up to 1500° C. Calibration of thermocouples. Properties such as thermoforce and stability. Use of platinum-metal (Ir, Rh, Pt, Ru) based alloys containing Re, Ru, W or Mo in thermocouples for temperature measurement above 1500° C. (X9q; EG-c30, 17-57)

7-X. (German.) Iron-Cobalt Permanent Magnetic Alloys With Additions of Vanadium and Chromium. Pt. B. Practical Applications. H. Fahlenbrach. Technische Mitteilungen Krupp, v. 18, Nov. 1960, p. 91-96.

Application of magnets of small cross section and great length composed of Fe-Co alloys with V and/or Cr in the production of rotary-magnet measuring devices, television correction rings, hysteresis motors and magnetogram carriers. Limitations and advantages in terms of fabricability, remanence and coercive force. 10 ref. (X11g; Fe-b, Co, Cr, V, 17-57, SGA-n)

8-X. (Ukrainian.) Simple Cryostat for Metallographic Research. R. E. Bubley and N. N. Lulicheva. Ukrainskii Fizichnyi Zhurnal, v. 5, Apr. 1960, p. 576-577.

Microscopic examination of phase transformations in alloys at low temperatures with the aid of a new cryostat consisting of a cylinder with a flat and transparent bottom filled with liquid oxygen or nitrogen. Influence of the thickness of transparent bottom on the magnified image of the etched sample. (X24b, M27)

9-X. A New Electron Gun for the Vacuum Evaporation of Metals and Dielectrics. R. Thun and J. B. Ramsey. Paper from "Vacuum Technology Transactions". Pergamon Press, New York, 1959, p. 192-196.

Description of a new electron gun which focuses the electron beam by a spherical field between cathode and anode. Pt, Si, W and Mo may be deposited with the apparatus. (X27a, L25g; Mo, Pt, Si, W)

10-X. Critical Comparison of Moving Bar Impact With Gas Expansion Machines for Dynamic Loading of Metals. J. M. Krafft. Journal of Applied Polymer Science, v. 4, Nov-Dec. 1960, p. 314-331.

Analysis of the motional characteristics of two high-speed testing machines, a gas-pressure and a bar-impact loader, utilized to determine dynamic loading of metals. Variables considered include high-velocity input and stiffness. Data are given for loading patterns and stress-strain curves for steel specimens. 9 ref. (X29, Q25; ST)

11-X. (German.) Problems Involved in Production of Ultra-High Vacuum. E. B. Bas. Schweizer Archiv, v. 27, Feb. 1961, p. 55-61.

Review of materials used in vacuum technology and systems for production of ultra-high (10^{-8} Torr and better) vacuum including Hg-diffusion pump and condensation steam trap, oil diffusion pump and absorption steam trap or condensation steam trap, systems with getter ion pumps, systems with cryo-pumps (He-cooling) and systems with molecular pumps. (X12p, X13e)

12-X. (German.) Vacuum Measuring Techniques. K. G. Muller. Schweizer Archiv, v. 27, Feb. 1961, p. 70-78.

Review of techniques and apparatus for low pressure measurement involving use of liquid (10^{-2} Torr), elastic spring (10^{-5} Torr), thermal conductivity (10^{-5} Torr) and ionization manometers (10^{-11} Torr and better) and the radiometer-manometer. Leak detection with particular reference to halide leak detector (sensitivity 10^{-11} Torr x liter per sec. and better). Application in vacuum engineering. (X19p, 1-52)

13-X. (German.) Experiences With a Novel Temperature Measuring Device on Roll Stands. Rudolf Schneider. Siemens Zeitschrift, v. 35, Feb. 1961, p. 123-125.

Optical temperature measurement of bloom surface after the ninth pass by the "Ardofot" pyrometer with registration by a strip chart compensator at 1100-1200° C. and a measuring error of less than ± 1%. (X9r, F23, 1-66)

14-X. Low Temperature Thermocouples. Pt. 1. Gold-Cobalt or Constantan Versus Copper or Normal Silver. R. L. Powell, M. D. Bunch and R. J. Corruccini. Cryogenics, v. 1, Mar. 1961, p. 139-150.

Application of a new cryostat for calibrating thermocouples at 4-300° K. Measurement of the thermoelectric power and potential difference for constantan, Au-2.1% Co alloy and normal Ag (0.37 at.% Au) versus Cu wires. 21 ref. (X9q, X24b, 2-63; Ag-b, Au-b, Cu-b, 17-57)

15-X. Bimetal Thermometers. E. R. Kebbon. Instruments and Control Systems, v. 34, May 1961, p. 841-845.

Construction and testing of bimetal element industrial thermometers of flat spiral, single helix and multiple helix design. Metals used in construction include Pt, Ag, brass, Au, Ni, Fe and Cr. Invar, a Ni-Fe alloy containing 36-50% Ni, is used as a length-measuring standard for low expansion. 8 ref. (X9n; SGB-a, 17-57)

16-X. Temperature Measurement by Filled System. Robert C. Nelson. Instruments and Control Systems, v. 34, May 1961, p. 849-853.

Review and classification of filled-system (pressure) thermometers using temperature-induced liquid or gas expansion effects with filling media of

Hg, Tl-Hg eutectic amalgam, gas, liquid or vapor and operation ranges varying from -450 to 1400° F. Evaluation of wells and bulbs made of brass, bronze, 304, 316 and 347 stainless steels, Ta, Pb, Ag, Ti, Sb, Cu, Monel, Hastelloy and glass. (X9n, 10-54; SGB-a, 17-57)

17-X. Ceramic-Insulated Thermocouples. L. Scadron. Instruments and Control Systems, v. 34, May 1961, p. 856-857.

Construction of ceramic-insulated thermocouples from multi-alloy assemblies of triaxial and bitriaxial thermocouples are produced by multiple-pass drawing and annealing to temperatures exceeding 1800° F. (X9q; SGB-a, Ni-b, Al-b, NM-f40, 7-59, 17-57)

18-X. Thermocouples for Ultrahigh Temperatures. J. C. Lochman. Metal Progress, v. 80, July 1961, p. 73-76.

Three new thermocouples have been devised for measuring temperatures in the 3000-5000° F. range. Of these, Pt-30% Rh/Pt-6% Rh and Ir/Ir-Rh are useful to about 3700° F. and W/W-26% Re is useful to 4200° F. Better heat insulators are expected to increase the range of the latter combination to 5000° F. (X9q)

19-X. Plasma Research Furthered by Stainless Steel Device. Steel, v. 149, Aug. 28, 1961, p. 74.

Application of 305 stainless steel in the supporting structure, vacuum vessel and coil cases of a unit designed for study of plasmas at very high temperatures. Tensile properties, fabricability and hardness of the steel are given with rolling, welding and other fabrication parameters. (X24f, F-general, K-general, Q-general; SS, 17-57)

20-X. The Metallurgists' Role in Selecting Materials for Business Machines. D. C. Williams. Metal Progress, v. 80, Oct. 1961, p. 79.

When choosing the correct alloy for stress-bearing parts in business machine, the final decision is generally made through the combined effort of the design engineer and the metallurgist. Application of design criteria to selection of tool-steel parts. (X14, J-general; ST, 17-57)

21-X. Investigation Into the Stability and Accuracy of Gauge Blocks. Metal Treatment and Drop Forging, v. 28, Oct. 1961, p. 407-409, 418.

Development of gage blocks that will retain calibrated lengths with high accuracy and less shrinkage. Requirements of thermal expansion, surface finish and flatness, parallelism and resistance. Production of hard, wear resistant surfaces by Cr plating, tungsten carbide or Al_2O_3 coating, Ni-Cr-B alloy spraying and case hardening by carbonitriding, carburizing and cyanide hardening. Materials include 410 stainless and 52100 modified steel. (X20a, J-general, L-general; ST, 17-57)

SUBJECT INDEX

Since the annotations in this book are grouped into broad classes on the basis of process or property, the major emphasis in the index has been placed on materials, products and applications. Entries under the names of processes and properties usually refer only to general treatments of the subject. Wherever possible, items have been indexed under the name of the material or the type of material (metals, alloys, and metal forms) or product. For example, material on the rolling of aluminum appears as a subhead under the main entry "Aluminum alloys," and not under the main entry "Rolling." It is suggested that the reader look under both the metal and alloy in seeking particular information. For instance, Aluminum, rolling and Aluminum alloys, rolling or even perhaps Aluminum-copper alloys, rolling.

The ASM-SLA Metallurgical Literature Classification, International (Second) Edition, has been used as an authority list, since this contains generally accepted and standardized metallurgical terminology and concepts. Index headings, therefore, fall mainly into the categories of materials (or products), forms of materials, properties, processes, and influencing factors, arrayed in approximately that order.

fatigue properties, 1489-Q, 1578-Q
flaw detection, 52-S
radiographic, 106-S
ultrasonic, 136-S
quality control, 246-E
shear properties, 183-Q
straightening, 372-K
stress relieving, 67-J
Weld metal
ceramic coating, 733-L
ductility, 862-Q
hydrogen in, 407-K
impact properties, 894-K
metallography, 812-K
notch sensitivity, 1163-Q
Welds
flaw detection, 210-S, 411-S
magnetic, 477-S
radiographic, 250-S, 393-S, 403-S
ultrasonic, 230-S, 269-S, 299-S
grain size, 364-M
grinding
surface, 747-G
internal flaws, 991-Q
shear strength, 705-Q
stresses, 585-Q
stress relief
heat treatment, 359-J
Wheel rims
flash welding, 123-K
Wiskers
research, 48-M
White cast iron. See Cast iron, white.
Wire, 208-A
applications, 167-P
Wire (cont.)
bending
equipment, 557-G
braze welding, 519-K
cladding, 316-L
cleaning and polishing, 181-L
composite, 318-A
finishing, 349-L
gas welding, 765-K
mechanical properties, 358-Q
percussion welding, 762-K
pickling
wetting agents, 995-L
synthetic resin coating, 396-L
Wiredrawing, 13-F, 78-F, 121-F, 143-F, 255-F, 279-F, 319-F, 62-W
lubrication, 409-F
plastic deformation, 89-Q
Wiredrawing dies
wear, 1735-Q
Wire industry
statistical analysis, 120-S
Wire mills
waste control, 35-A
Wire rod
descaling, 588-L, 642-L
Wire rope
fatigue tests, 292-Q
wear, 23-Q
Work hardening
theory, 207-Q
Work hardening capacity, 44-Q
Wrought iron
wear properties, 1150-Q

X

X-ray analysis, 22-A, 23-A, 79-A, 42-M, 43-M, 45-M, 65-M, 149-M, 188-M, 239-M, 7-S, 75-S, 306-S
diffusion, 12-N
X-ray microscopy, 95-A, 179-A, 21-M, 354-M, 453-M, 471-M

Y

Yellow brass castings
foundry practice
chilling, 198-E
mechanical properties, 532-Q, 533-Q
Yield strength
effect of temperature, 876-Q
Ytterbium. See also Rare earth metals.
electrical conductivity
effect of low temperatures, 444-P
Yttrium, 3-A, 294-A, 61-P
electrorefining, 188-C

Yttrium (cont.)
extraction and refining, 347-C
solvent, 410-C
mechanical properties, 1626-Q
polarographic analysis, 15-S
reduction
by metals, 381-C
use for alloying, 571-N
use for nuclear reactors, 233-T
zone melting, 369-C
Yttrium hydride
effect of nitrogen, 408-N

Z

Zinc. See also Zinc alloys; Zinc die castings; Zinc single crystals; etc.
anodizing, 24-L
atomic structure, 441-M
cathodic protection, 157-R
chemical reduction plating, 250-L
chromate coating, 650-L, 669-L
cleaning and polishing, 297-L
coating, 937-L
coating with. See Zinc coatings.
composition analysis, 464-S
continuous casting, 275-C
corrosion, 224-L, 134-R, 538-R
anodic, 32-R, 176-R
atmospheric, 254-R, 279-R, 406-R, 727-R, 749-R
by acids, 384-R, 675-R
by molten metals, 596-R
by sea water, 552-R
by steam, 436-R
chemical, 341-R, 856-R
effect of paints, 844-R
inhibition, 740-R, 793-R
tests, 738-R
corrosion prevention, 261-R, 372-R
corrosion tests
high-humidity, 921-R
creep, 134-R
crystal structure
dislocations, 378-M
texture, 58-M
determination, 60-S, 424-S, 445-S
die casting, 134-E, 230-E, 400-E, 438-E, 505-E, 558-E. See also Zinc die castings.
gating, 463-E
diffusion
in steel, 345-N
in tin, 173-N, 274-N
dimensional changes, 79-P
distillation, 301-C
drawing, 108-G
Zinc (cont.)
electrical conductivity
effect of low temperatures, 185-P
electrochemical properties, 139-P, 385-P
ionization potential, 563-P
electroplating of, 12-L, 378-L, 424-L, 450-L, 523-L, 576-L
baths, 103-L, 947-L
control, 301-L, 683-L, 906-L
effect of manganese, 829-L
ultrasonic, 352-L
electroplating on, 63-L
extraction and refining, 107-C, 403-C
chemical, 139-C
distillation, 99-C, 196-C, 399-C
electrolytic, 54-C, 336-C, 400-C, 407-C
induction melting, 354-C
leaching, 265-C
rectification, 353-C
extrusion, 92-F, 116-F
impact, 167-G
finishing, 618-L
impact properties, 789-Q
magnetic properties
nuclear magnetic resonance, 17-P
melting and casting, 33-C, 51-C
mercury coated
fracture, 799-Q
microstructure, 392-M
optical properties, 341-P
oxidation, 451-R
X-ray diffraction study, 150-R
phosphate coating, 273-L, 354-L
physical properties, 396-P
polarographic determination, 3-S
radiographic analysis, 24-S
reclamation, 536-A
reduction
by gases, 109-C, 406-C
rolling, 328-F
scrap reclamation, 42-E
smelting, 157-C
solubility, 243-P, 269-P, 349-P
sonic properties, 857-Q
spraying of, 196-L, 327-L, 413-L
statistics, 449-A, 451-A
thermal conductivity
effect of low temperatures, 454-P
tumbling, 266-L
use for automobiles, 152-T
vapor deposition, 323-L, 569-N
vapor pressure, 700-P
welding, 618-K, 810-K
work hardening, 1357-Q
zone melting, 178-C

Zinc alloys, 187-A
activity coefficient, 400-P
cleaning
electrolytic, 330-L
corrosion, 449-R
atmospheric, 624-R
crystal structure, 630-M
die casting, 235-E, 239-E, 336-E, 568-E. See also Zinc die castings.
effect of ultrasonics, 346-E
vacuum, 59-E
electrical properties, 60-P
electroplated
corrosion
atmospheric, 234-R
electroplating on, 198-L
extrusion, 406-G
finishing, 741-L
mechanical, 771-L
heat treatment, 274-J
interphase energy, 276-P
magnetic properties, 280-P
mechanical properties
effect of glass content, 235-Q
oxidation, 595-R
phase diagrams
ternary, 5-M, 29-M
physical properties, 510-P
powder metallurgy, 241-C, 15-H
selection, 530-A
shell mold casting, 577-E
strain aging, 103-N
use for tools, 471-G
Zinc antimonide
electrical properties, 162-P
Zinc-aluminum alloys
activity coefficient, 265-P
corrosion
intergranular, 867-R
electrical conductivity, 472-P
heat of reaction, 102-P
optical properties
absorption, 348-P
Zinc-aluminum-copper alloys
phase diagrams, 81-M
Zinc-aluminum-magnesium-copper alloys
phase diagrams, 92-M
Zinc-aluminum-tin alloys
electrical conductivity, 345-P
Zinc-bismuth alloys
thermodynamic properties, 484-P
Zinc-cadmium alloys
thermodynamic properties, 155-P
Zinc-calcium single crystals
structure, 492-M
Zinc castings
design, 12-T
Zinc coatings, 147-L, 621-L, 846-L. See also Zinc electroplate.
corrosion, 69-R, 637-R
for columbium, 330-N, 331-N
vapor deposition, 431-N, 432-N
Zinc-cobalt-carbon alloys
phase diagrams, 552-M
Zinc-copper alloys
atomic structure
interatomic bonding, 648-M
intermetallic compounds, 321-N
transformations, 145-N
Zinc-copper-titanium alloys
microstructure, 624-M
Zinc die castings, 135-E, 229-E, 289-E
alloys for, 154-E
properties, 281-P
cleaning and polishing
vibration, 563-L
defects, 483-E
design, 182-T, 252-T
electroplated
corrosion, 49-R, 146-R
wear properties, 928-L
electroplating on, 268-L, 921-L, 922-L
finishing, 539-G, 825-L, 927-L
gating, 149-E, 301-E, 302-E, 377-E
grinding, 381-G
machining, 739-G
mechanical properties, 1430-Q
painting, 365-L
polishing, 694-L
production, 122-E
statistics, 450-A
tumbling, 267-L
use for locks, 148-T
Zinc electroplate
coloring, 56-L
corrosion resistance, 182-L
properties, 830-L
standards and specifications, 164-L
stresses, 386-Q
structure, 104-L
thickness measurement, 904-L
Zinc-gold alloys
superlattice formation, 13-N
Zinc-iron-aluminum alloys
phase diagrams, 567-M
Zinc-manganese-copper alloys
mechanical properties, 1041-Q
Zinc ores
concentration, 14-B, 35-B
crushing
grinding and sizing, 124-B
flotation, 59-B, 103-B
fluid-bed process, 99-B, 103-B
preparation, 37-B, 146-B

Zinc ores (cont.)
radiochemical analysis, 138-S
roasting, 19-B, 97-B, 98-B, 135-B, 136-B
effect of oxygen, 127-B
Zinc selenium alloys
optical properties, 160-P
thermal expansion, 486-P
Zinc-silver alloys
transformations, 638-N
Zinc single crystals, 1668-Q
dislocations, 290-M, 326-M
electrical conductivity, 251-P
electrical properties, 411-P
fatigue properties, 178-Q
fracture, 428-Q
brittle, 107-Q, 1597-Q
growth, 216-N, 254-N, 398-N, 597-N
metallography
etching, 601-M
plastic deformation, 1173-Q
slip, 1515-Q, 1694-Q
plastic properties, 151-Q
recovery, 528-N
strain aging, 170-N
stresses
effect of deformation, 1526-Q
structure
electron microscopy study, 574-M
twinning, 488-Q
deformation, 1564-Q
work-hardening capacity, 172-Q
work softening, 1707-Q
Zinc telluride
optical properties, 160-P, 161-P
Zinc-thorium alloys
thermodynamic properties, 415-M
Zinc-tin alloys
thermodynamic properties, 535-P
Zinc-tin electroplate
structure, 611-N
Zinc-titanium-copper alloy
electroplating on, 558-L
Zirconium, 97-A, 166-A, 295-A, 535-A
analysis, 444-S
special separation, 451-S
arc cutting, 2-G
arc welding, 459-K
gas shielded, 218-K, 444-K, 542-K, 797-K
centrifugal casting, 532-E
colorimetric determination, 297-S
corrosion, 185-R
by acids, 458-R, 690-R
by fuels, 504-R
chemical, 274-R, 355-R, 885-R, 906-R
effect of irradiation, 909-R
Zirconium, corrosion, (cont.)
intergranular, 443-R
stress, 631-R
diffusion, 458-N
of oxygen, 227-N, 308-N
self, 97-N, 565-N
electrorefining, 247-C, 397-C
electron emission, 299-P
extraction and refining, 64-C, 110-C, 155-C, 234-C

halide decomposition, 192-C
materials handling, 432-A
mechanical properties
effect of irradiation, 901-Q
melting and casting, 154-C
metallography, 108-M
etching, 62-M
optical properties
absorption and transmission, 230-P
oxidation, 70-R, 110-R, 111-R, 112-R, 129-R, 208-R, 281-R, 363-R, 414-R, 555-R, 575-R
passivation, 79-R, 127-R
physical properties, 126-P, 127-P
polarographic analysis, 14-S
powder metallurgy, 54-H, 92-H
pressing, 60-H
radiochemical determination, 55-S
reduction
by metals, 255-C
separation, 83-S
solubility, 482-P
of oxygen, 698-P
spectrographic determination, 116-S
sprayed
properties, 158-L
swaging, 214-F
tensile properties
effect of impurities, 507-M
twinning
deformation, 872-Q
use for chemical processing equipment, 256-T

Zirconium (cont.)
use for nuclear reactors, 241-A, 6-T, 20-T, 71-T
use in nodular cast iron, 426-Q
vacuum melting, 123-D
vapor-deposition coating, 711-L, 740-L
welding, 33-K, 457-K
Zirconium alloys
arc cutting, 624-G
arc welding, 264-K
broaching, 724-G
centrifugal casting, 132-E, 271-E
corrosion, 269-R
by steam, 488-R, 882-R
by waters, 19-R, 392-R
chemical, 610-R, 880-R
effect of structure, 754-R
corrosion tests, 514-R
crystal structure
X-ray diffraction study, 589-M
diffusion
of hydrogen, 543-N
self, 152-N, 154-N
dilatometry, 414-M
electrical conductivity, 423-P
electron-beam welding, 837-K
fabrication, 290-F
flaw detection, 429-S
gases in, 122-N
heat treatment, 164-J
mechanical joining
to stainless steel, 663-K
mechanical properties
effect of radiation, 554-Q
microstructure, 222-M
oxidation, 694-R
oxide coating, 838-L
phase diagrams, 100-M, 250-M
binary, 22-M
complex, 371-M
ternary, 654-M
physical properties, 138-P
resistance welding, 536-K, 699-K
selection, 530-A
specific heat, 436-P
tensile properties, 944-Q, 1248-Q
thermal expansion, 502-P
Zirconium alloys (cont.)
thickness measurement
ultrasonic, 430-S
transformations
isothermal, 384-N
tubing
preferred orientation, 606-M
use for nuclear reactors, 248-A, 74-T, 146-T
Zirconium-beryllium alloys
metallography, 382-M
Zirconium cladding
mechanical properties, 234-Q
use in nuclear reactors, 313-R
Zirconium-columbium alloys
oxidation, 4-R
Zirconium-bysprosium alloys
phase diagrams, 79-M
Zirconium-magnesium alloys
solubility, 97-P
Zirconium-molybdenum alloys
phase diagrams, 219-M
Zirconium ores
concentration
electrostatic, 128-B
roasting, 109-B
Zirconium-oxygen alloys
crystal structure, 99-M
Zirconium-platinum alloys
transformations, 411-M
Zirconium-plutonium alloys
growth
effect of irradiation, 209-P
Zirconium-rare earth alloys
melting and casting, 370-C
Zirconium-rhenium alloys
phase diagrams, 336-M
Zirconium-silicon-boron alloys
phase diagrams, 246-M
Zirconium-tin-titanium alloys
phase diagrams, 608-M
Zirconium-titanium alloys
physical properties, 235-M
Zirconium-uranium-hydrogen alloys
creep properties, 774-Q
transformation
isothermal, 396-N
Zone melting, 45-C, 65-C, 123-C, 145-C, 194-C, 270-C
computer simulation, 250-C
